"The wire antennas used with crystal receivers are monopole antennas which
develop their output voltage with respect to ground. They require a return
circuit connected to ground (earth) so that the current from the antenna,
after passing through the receiver, can flow into the ground."

Unnormally you can have only the monopole antenna and the diode and ground.

What current is flowing between the diode and the ground?
Is it dependent on the distance from the transmitter?
S*

Dear Szczepan,

I have explained to you how it works.  That explanation is correct.
Please stop adding incorrect information and asking stupid questions.

I know two stupid Poles.  Are there more?

The words "almost always, almost every time, almost invariably and almost without exception" are missing.

As crystal receivers are normally used at low frequencies (long and medium wave), the obvious antenna to use is an end-fed long wire monopole. This, of course, requires a ground.

However, in principle, you could use a (probably large) dipole, provided you modified/designed the circuit of the receiver so that it would take a balanced input (which would probably also be low impedance).

I'm pretty sure that some of the early radar receiving systems used essentially a dipole antenna feeding a crystal receiver.

A dipole consists of two poles.  As some Poles can only count to
one, they will have a different explanation.

No, to issue or emerge in rays or waves.

Do you wear slip on shoes?

```

Rather solitons.
Photons are the damped waves.
CW consist of the solitons.
Each portion of electrons which jump off from the end of an antenna travel
as the soliton.

Imagine the scene - a tall building, spectators on the pavement around it
and, at the top of the building, an electron is threatening to jump!!
Would we shout "jump" or would we shout "don't do it"?
Anthropomorphism is wonderful, isn't it.

73, Ian.

Summary: Short reminder for unmoderated newsgroups that crossposting is permitted
Keywords: FAQ, ham, amateur, radio, moderated, unmoderated, crossposting, permitted
Bytes: 3840
X-Received-Bytes: 3888

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.2 2011/11/02 04:08:53
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team had decided to consider |
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. After a successful trial |
period (90 days, through early July 2009), we decided to adopt this |
change permanently. |

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

Each portion is a quant. Only for children the light consists of particles.

CW means continuous waves. Damped waves consists of portions.

> Each portion is a quant.

Unfortunately for your argument, the fact that fields/waves are quantized p=
roves that they are particles, even though they are a somewhat special kind=
 of particle and capable of field/wave behavior. Hint: if you set up an exp=
eriment to look for a quantized photon particle, you will detect a quantize=
d photon particle the energy of which is related by frequency to Planck's e=
quation.

http://employees.oneonta.edu/viningwj/sims/plancks_equation_s.html

FYI, even one single Bucky-ball, known to consist of nothing but a large nu=
mber of carbon atoms, is capable of wave behavior. How do you explain that =
one?

Each radio amateur is able to prove (and measure the net flow) that
electrons jump off from the transmitting antenna.
For what you need the new hiphothesis?

Hello Szczepan. Are you now a radio amateur?
How about this for a holiday for you - https://www.emfcamp.org/ ?

Regards, Ian.

I think it is you that keeps coming up with nonconforming ideas about how antennas operate. So we'll call your hypothesis "new" even though you dig it out of 150 year old documents.

Hello Rob.

As others have said, and a search confirms, Szczepan has been posting some
of his ideas for a year or more. Seems unable to read, understand and learn
whereas most children with a textbook are capable of reading, understanding
and learning.
I think I have worked with only one person who refused to learn new ideas
and techniques. His work involved using a new computer. I showed him how
to use it and then let him try to get on with the job. Eventually he did
become willing to have a go. He now seems progressive in comparison with

Szczepan.

73, Ian.

Wrong; all radio amateurs are able to show that there are NO electrons
jumping off the ends of the antennas.

Do you wear slip on shoes?

All time the ideas are the same and are confirmed:

"It is found that an electron which seems to us to be moving
slowly, must actually have a very high frequency oscillatory motion of small
amplitude superposed on the regular motion which appears to us. As a result
of this oscillatory motion, the velocity of the electron at any time equals
the velocity of light." From:

No, you are the only one in the world that currently believes electrons
jump off the end of an antenna.

> "It is found that an electron which seems to us to be moving

It was later shown and proved that it is impossible for an electron to
move at the speed of light under any conditions.

That's what you get when you only read ancient literature.

Do you wear slip on shoes?

Electrons that "jump off" a transmitting antenna are known to be non-cohere=
nt. Such is called "corona", an undesirable effect for antennas. The cohere=
nt particles that can be measured being emitted from an antenna are photons=
 and that's NOT a new hypothesis. It's close to being a century old. Einste=

in was awarded the Nobel Prize in 1921 for discovering the nature of the ph=
otoelectric effect of photons.

"Later, in 1905 Albert Einstein went further by suggesting that
electromagnetic waves could only exist in these discrete wave-packets.[5] He
called such a wave-packet the light quantum (German: das Lichtquant). "

"As shown by Albert Einstein,[5][38] some form of energy quantization must
be assumed to account for the thermal equilibrium observed between matter

and electromagnetic radiation; for this explanation of the photoelectric
effect, Einstein received the 1921 Nobel Prize in physics.[39]"

"Hence, Einstein's hypothesis that quantization is a property of light
itself is considered to be proven."

Natural light is emitted from many oscillators in discrete wave-packets.
Hertz made the one oscillator which radiate the discrete wave-packets. The
Hertz waves are exactly as the light.
But the CW are emitted continuously.
Who was awarded the Nobel Prize for discovering any portions in CW?

And that light quantum is known today as the photon to everyone but you.

All a bunch of gibberish nonsense; all electromagnetic radiation is photons.

Do you wear slip on shoes?

In frequency, yes, in composition, no.

Do you wear slip on shoes?
```

There is much more energy in one visible light photon than in one RF photon=
. The fact that photon energy varies directly with frequency blows your "ju=
mping electron" theory right out of the water, i.e. recognized as a scienti=
fic myth by all rational technical people since long before any of us were =
born. "Electrons jumping off an antenna" is akin to the theory of a flat ea=
rth at the center of the universe. Do you still believe that one?:)

If and when an electron leaves an antenna, it ceases to be exposed to the R=
F energy that is causing it to vibrate and *becomes like any other electron=
 floating in space* - devoid of frequency and oscillations - incapable of p=
ropagating a coherent RF wave. Photons have no such limitations.

In Australia we have a left wing politician who is the equivalent of SB. She remains implaccably dead pan though whilst normal people, in an argument, are reduced to almost tears in trying to implant at least a seed of common sense. To no avail, she remains an impassive idiot.

I suspect Irv is totally correct. Do your blood pressure a favour!!
Kind regards
John

We have a perfect match in Minnesota - Michele Bachmann.

She is quite embarrassing.

Chortle.. When they passed out the brains, she was a K-mart shopper.
But, let us not forget Barbara Boxer.
In CA, she should at least give Waters a run for the money.
And then you have lil Debbie Wasserman-Schultz. :|
Not only is she brain dead, but if you run her hair through a
clothes wringer, you will obtain enough oil to lubricate three
Ford trucks. :/

Summary: Recruitment announcement for ham-radio-related FAQ articles

Keywords: FAQ, Intro, amateur, ham, radio, recruit, recruitment

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/recruitment
Revision: 1.2 2009/11/25 14:41:01
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

"Leaping" fits to the oscillatory flow:
""It is found that an electron which seems to us to be moving
slowly, must actually have a very high frequency oscillatory motion of small
amplitude superposed on the regular motion which appears to us. As a result
of this oscillatory motion, the velocity of the electron at any time equals
the velocity of light." From:

| S*

Good morning Szczepan.
Would you kindly explain that in your own words, please? There's no point
quoting a text if you do not understand it.

Anyone else wonder why there aren't any postings here from other Poles?

73, Ian (second attempt with obvious spelling errors corrected).

Considering the overall volume of postings here and the fraction of world population that the Poles are, I don't think it is statistically surprising that you see only a single Pole here.

In the UK, until around 1970, I think all cars had positive 'ground'. I
would be very surprised if USA cars were any different. I believe that
the reason for this is that it was supposed to reduce corrosion of the
electrical connections.

The change to negative ground seemed to coincide with the introduction
of more equipment with NPN transistors (which were generally designed to
have a positive power feed). For a few years, many car radios had a
polarity switch, and if you moved a radio from your old +ve ground car
to you new -ve ground car, you had to remember to change the switch
over. I recall one works colleague blowing up a rather good radio when
he didn't.

If your car had the old dynamo generator (which once they invariably
did), it was usually very easy to reverse the polarity. To do this, you
simply had to give the field winding of the dynamo a 'splat' of reverse
polarity (which reversed the residual magnetism) and (of course), change
over the battery connections (which sometimes entailed fitting a longer
battery ground cable). As the starter motor was series wound, it still
turned in the same direction.

I wrote: "That fields and the gravity are only in the textbooks (as e sperate
chapters).
They are also in engineering."

Heaviside and Pointing assumed: "In this case very near the wire, and within it, the lines of magnetic force are circles round the axis of the wire. The lines of electric force are along the wire,"
So they had the result: "The whole of the energy then enters in through the external surface of the wire, and by the general theorem the amount entering in must just account for the heat developed owing to the resistance, since if the current is steady there is no other alteration of energy. It is, perhaps, worth while to show independently in this case that the energy moving in, in accordance with the general law, will just account for the heat developed." From:
http://en.wikisource.org/wiki/On_the_Transfer_of_Energy_in_the_Electromagnetic_Field

Is it true now?

"the lines of magnetic force are circles round the axis of the wire" is the Biot-Savart law.
In physics no magnetic monopoles and no the lines of magnetic force.

If you read the whole article you see that Pointing was full of doubts.
Heavisde was en engineer and Pointing was a teacher:
"Poynting and the Nobel prizewinner J. J. Thomson co-authored a multi-volume undergraduate physics textbook, which was in print for about 50 years and was in widespread use during the first third of the 20th century.[5] Poynting wrote most of it.[6]"

It is not easy to explain physics to children and engineers.
I am not a teacher and a textbook writer.
But I know that the electrons are. Heaviside and Pointing did not that when they wrote EM.

The old cars have only a bulbs. There is an Edison effect. The positive
ground is better in such case.
Now you have many electronics devices. For them must be the negative ground.

Step by step and you will be an expert on electrons.

Use lots of ICs. It doesn't matter which ones. Just put a lot in.

Hello chaps.
If Szczepan means "INcompetent" when he wrote "UNcompetent " then I would
have to agree with him and cite him as an example.
I also see that the quote, shown above, is from a CB site and not from an
amateur radio site. [Shall we assume he doesn't know the difference between
amateur radio and CB?]
Google translates it to:
" Installation of a dipole antenna consists of:
- Antenna - radiator and counterweight, which are made up of two
 The same wires, or pieces of metal. Because of this, with both elements
 Are the same (shape, material, length), have the same characteristics - are
 Symmetrical.
 - Power cable - coaxial cable in which the signal
 Transmitted by wire inner braid and returns the screen. Braid and lived
 Have a different inner diameter and shape, and thus have different
 Electrical parameters (eg impedance) - are unbalanced. "

Still, Szczepan  is good for a laugh.

73, Ian.

In a circuit one part is protected and the second is attacked. So the
polarity is not the key issue.

Edison in his DC supply used the 3 wire system. +110V, -110V and neutral.
I do not know what was preffered in the 2 wire.

It seems to me that in overhead wires should be the excess of electrons. In
a storm weather the bulbs shine for free.
```

Now almost all DC supply systems are like that in the modern car. In the
"live" wire is the deficit of electrons.

AFAIK, positive ground was never a standard in the USA.

While there may have been some exceptions in the very early days, all the
cars I've seen back to the 20's were negative ground.

I owned some positive ground British cars and there were "challenges", like
arguing with US mechanics that no, the battery wasn't backwards and putting
in anything but a British radio or electric fuel pump.

No, they did not.

British cars had positive ground until the 60's.

Radios started appearing in cars in the 30's as well as electric motors.

> There is an Edison effect.

The Edison effect is how vacuum tubes work and has nothing to do with cars.

> The positive
> ground is better in such case.

Having positive or negative ground has no effect on how vacuum tubes or anything else works, it is simply a matter of convention as to which side of the power source is concidered chassis.

> Now you have many electronics devices. For them must be the negative ground.

No, it is not a matter of "must", it is a matter of convention; either way will work.

> Step by step and you will be an expert on electrons.

Like you?

You are an ignorant, babbling, ineducable idiot who knows absolutely NOTHING about how ANYTHING works.

Everything you wrote here is utter, stupid, babbling, nonsense.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics
or even basic electricity in any language?

Is it because you are too stupid to be able to understand the material?

Once again everything you have written is stupid, babbling, nonsensical,
gibberish.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about how ANYTHING works.

You are a laughingstock and a mental case.

I think you are quite insane.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics
or anything else for that matter, in any language?

Is it because you are too stupid to be able to understand the material?

> Is it true now?

You are such a moron you don't have a clue wht the above is talking about.

It is refering to DC magnetic fields.

> "the lines of magnetic force are circles round the axis of the wire" is the
> Biot-Savart law.

> In physics no magnetic monopoles and no the lines of magnetic force.

In physics, no magnetic monopole has been found and lines of magenetic
force is a well known concept to everyone but you.

> If you read the whole article you see that Pointing was full of doubts.
> Heavisde was en engineer and Pointing was a teacher:

Poynting was a physicist, you babbling moron.

> "Poynting and the Nobel prizewinner J. J. Thomson co-authored a multi-volume

> was in widespread use during the first third of the 20th century.[5]
> Poynting wrote most of it.[6]"

So what, you babbling idiot, lots of physicists write textbooks.

> It is not easy to explain physics to children and engineers.

Actually, it is quite easy to teach normal children and engineers, but it would be impossible to teach anything to a moron like you.

> I am not a teacher and a textbook writer.

No, you are a babbling moron.

> But I know that the electrons are.

You don't know what ANYTHING is.

> Heaviside and Pointing did not that when
> they wrote EM.
> S*

You are an ignorant, babbling, ineducable idiot who knows absolutely NOTHING about how ANYTHING works.

You don't even understand what an antenna is or the difference between an electric field, a magnetic field, and an electromagnetic field.

Electrostatic and magnetostatic fields are created by DC.

An antenna is a device that converts the AC electrical energy at it's teminals into electromagnetic energy which radiates from the antenna and also coverts the electromagnetic energy which antenna intercepts into AC electrical energy at it's terminals.

That is ELECTROMAGNETIC energy, not magnetostatic nor electrostatic energy.

From http://en.wikipedia.org/wiki/Biot%E2%80%93Savart_law

"The Biot-Savart law is fundamental to magnetostatics, playing a similar role to Coulomb's law in electrostatics. When magnetostatics does not apply, the Biot-Savart law should be replaced by Jefimenko's equations."

What that means, you babbling idiot, is that Jefimenko's equations apply to antennas, not the Biot-Savart law or Coulomb's law.

Jefimenko's equations were first published in the 1960's so anything written before then is essentially irrelevant to a discussion of antennas.

Since an antenna is defined in terms of it's terminals, anything that may be connected to the terminals, such as a balun or a transmission line, has NOTHING to do with what the antenna is or how the antenna operates.

What that means is that ONLY the voltage at the antenna terminals effect what is going to happen, NOT how the voltage got there.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics
in any language?

Is it because you are too stupid to be able to understand the material?

This sounds like a school class project.  If so, we should not be
doing your homework as you will not learn anything.

Some general direction:
<http://www.linxtechnologies.com/en/products/modules/kits>
<http://www.rfsolutions.co.uk/acatalog/RF_Development.html>
<http://www.ti.com/tool/cc1101dk433>
<http://www.radiotronix.com/products/proddb.asp?ProdID=216>
etc.  Google for "433 MHz development kit".  These development kits
are NOT cheap, but will give you a clue as to what's involved in the
product development.

For antennas, Google for "433 MHz antenna".  There are plenty to
choose from.  Most likely, a 1/4 wave wire whip antenna will be
sufficient.

For antenna design help, Google for "433 MHz antenna design".  This
might be useful for comparing different types of antennas:
<http://www.ti.com/lit/an/swra161b/swra161b.pdf>

> i want to make a remote control for 3 relays using the
> encoders/decoders

There are also commerical products that do roughly what you propose.
Reverse engineering the design and using similar components for your
project is possible:
<http://www.ebay.com/itm/170740349762>
<http://www.ebay.com/itm/170854388957>
etc...

How would anyone here know that as it depends on what kind of range you
exepect to get.

The simplest antenna would be a quarter wavelength piece of wire.

> is there any other thinks i have to know?

Probably.

Yes, that's the way coherent photons orient themselves around a wire carrying RF energy. We can forgive Heaviside and Poynting for being ignorant of photons but today, some of us have alleviated our ignorance.

Hello Szczepan.
Best place to learn about photons would be one of the physics or science
newsgroups.
Regards, Ian.

Here's a pretty good overview:

http://en.wikipedia.org/wiki/Light_quantum

For information on EM radiation, superposition, and interference, I would
recommend:

"Optics", 4th edition, by Eugene Hecht, available from www.abebooks.com

University level textbooks.

Ooops, I forgot.

You are a babbling moron incapable of reading a textbook in any language,
thus you will always remain an ignorant, babbling, idiot.

"8 Polarization 319"

Could you look at this?

Is in Hecht's the polarised light as the transverse wave (Fresnel,
Heaviside) or,

The longitudinal waves transmitted from   the two sources (dipole) (Faraday,
Lorenz, Tesla).

Yes, proved to be pure fantasy. The Standard Model is as close to reality as we have gotten so far. The modern-day atom smashers have proved just how ignorant the speculations of the earlier physicists really were.

> &quot;8 Polarization 319&quot; Could you look at this?

In my 4th edition, Chapter 8 starts on page 325. The first sentence says: "... light may be treated as a transverse electromagnetic wave." Nowhere does it say that light may be treated as a longitudinal wave.

"" In 1817, Young had proposed a small transverse component to light, while
yet retaining a far larger longitudinal component. Fresnel, by the year
1821, was able to show via mathematical methods that polarization could be
explained only if light was entirely transverse, with no longitudinal
vibration whatsoever.
From:  http://en.wikipedia.org/wiki/Fresnel

As you see the Fresnel model is simpler than Young.
In the texbooks are only simple things.

The Authors MAY know that. So they wrote: "light may be treated". MAY
instead "Without of any doubts".

Yes; proved wrong like all your other babbling nonsense.
```

Once again you drag up crap written nearly 100 years ago that has long been proven to be false.

You are a moron.

You question is pure, meaningless, babble.

You are an ignorant, babbling, ineducable idiot who knows absolutely NOTHING about anything.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics or anything else in any language?

Is it because you are too stupid to be able to understand the material?

Yeah, so what?

Light can be viewed as a transverse electromagnetic wave, that has been
established.

> As you see the Fresnel model is simpler than Young.

Actually, no it is not, but it is all mute as that crap is almost 200 years old and knowledge, except for yours, has improved greatly since then.

> In the texbooks are only simple things.

How would you know, you babbling moron, you have never read one because even high school level textbooks are to difficult for you to understand.

>
> The Authors MAY know that. So they wrote: "light may be treated". MAY
> instead "Without of any doubts".

Nope, this just shows how stupid, ignorant, and ineducable you are, moron.

Light may also be treated as photons.

You are so utterly stupid you will NEVER be able to understand that elecromagnetic radiation can be viewed both as waves or photons.

You are a babbling idiot and a laughingstock.

But authors then said different. They say things that are not agreed to
by author today who no knowing what they are meaning.

Or something like that.

thanks that helped...
BTW i'm making a project for my own not any kind of homework.
i have one more question : if i wanted to make my device have a bigger
range like 500-1000meters should i put an amplifer before the antenna?
i should change the antenna in to yagi shouldn't i?

FCC 15.209
<http://louise.hallikainen.org/FCC/FccRules/2012/15/209/>
200 uv/meter maximum, measured at 3 meters. That works out to about
-46dBm ERP or about 12 milliwatts into a unity gain antenna.

This should explain how it all works:
<http://transition.fcc.gov/Bureaus/Engineering_Technology/Documents/bulletins/oet63/oet63rev.pdf>
See the calcs on Pg 29.

Claims 500 meters:
<http://www.sparkfun.com/products/155>
At 10mw, this is close to maximum legal. Anything more than that and
you're going to start interfering with wireless weather stations, car
alarms, etc.

Sorry, brain damage.
The -46dBm should be 10.8dBm ERP

Yes. In one chapter as waves and in the next as particles.

But it means only that you do not know what the light is.

The Giants discovered in XIX century that light is the oscillatory flow of electrons.

> Today we too, are still ignorant to a certain extent, but hopefully less
> ignorant than 19th century folk.

In XX century was done the first rectenna: "A rectenna is a rectifying

antenna, a special type of antenna that is used to convert microwave energy
into direct current electricity. "
In XXI century are the optical rectennas.

But the first were the crystal radio:
"The simplest crystal radio receiver, employing an antenna and a
demodulating diode (rectifier), is actually a rectenna".
From: http://en.wikipedia.org/wiki/Rectenna

You wrote "latest theories that support the latest experiments are the best
"knowledge" that we have so far".

But there are plenty of theories. Which one is the best?

To have knowledge means know the facts not theories.

```

Every time yet another post on this subject arrives, I can't help thinking of the limerick about the 'Young man of Devizes' (a small town in Wiltshire, England). Those who have no idea what I'm talking about can Google.

Perhaps there's a similar one about a radio amateur whose dipole had unequal wire sizes?

Oh dear! The Wiki page tells us that a rectenna converts microwave energy
then says, inconsistently, that crystal radios (which operate on MW and LW)
are rectennas.
I think the rectenna was mentioned by Szczepan several months ago - are we
going around the loop once more?

Is it worth commenting about scientific method, theory and fact?
I'll say that reading Szczepan's postings makes a good spectator sport.

73, Ian.

That is wrong, 10mW ERP is what these lowpower devices are allowed
to transmit.

If so, then more than 200uV/m is allowed. Do the calculation as Jeff
supplied:

<quote>
This should explain how it all works:
<http://transition.fcc.gov/Bureaus/Engineering_Technology/Documents/bulletins/
oet63/oet63rev.pdf>
See the calcs on Pg 29.

But that has since been proved not to be a fact, i.e. their theory has been=
 disproved. Just as Issac Newton's discoveries were a little off, so were t=
he "Giants" about which you speak. In RF conductors, electrons do oscillate=

```
 but they are much too slow to "flow". I can crawl on my knees faster than =
electrons flow in a wire and that has been proved by actual measurements. T=
he RF fields/waves that are flowing around a conductor at the speed of ligh=
t are photons like the ones you are using to read this screen, just at a di=
fferent frequency. When you realize what is the nature of the thing that is=
 incident upon your retina, you will understand EM radiation.
=20
> But there are plenty of theories. Which one is the best?

The one that agrees with the latest experimental measurements. Einstein's t=
heory that gravity curves space was just a theory until proved valid by act=
ual experimental measurements. The CERN Large Hadron Collider is providing =
actual experimental measurements as we speak. If the measurements disagree =
with the Standard Model, we will have to change the Standard Model.
=20
> To have knowledge means know the facts not theories.

We will probably never know all the "facts" - the best we can do is become =
less ignorant. All of our models of reality exist in human minds filtered t=
hrough human senses none of which are perfect. For instance, entangled part=
icles seem to violate the spirit of the speed of light limit, yet they have=
 been proved to exist by experiments. And how is it possible for a huge car=
bon Buckyball to pass through two slots at the same time and interfere with=
 itself on the other side? Seems to me that the particle is creating a wave=
front in the structure of space.

The best models are the ones that best match the latest experimental eviden=
ce. Some of yours do not match the latest experimental evidence at all, i.e=
. seems that you are deliberately choosing to remain ignorant (or just pull=
ing our legs).

>Hmmm... my calculator says P = 12 nanowatts.

Your calculator is correct. My -46dBm is wrong. It was late, I was
multitasking, the phone range, I was tired, etc. Sorry for the
muddle.
+10.8dBm converts to 12 mw.
<http://www.rapidtables.com/convert/power/dBm_to_mW.htm>

Then... I find a 433MHz radio that delivers +20dBm (100mw).
<http://www.sparkfun.com/products/10153>
By my reading of 15.209, that's overpowered unless operating with a
miserable -9dB gain antenna. From the manufacturers web pile at:
<http://www.hoperf.com/rf_fsk/>
they offer +10, +13, and +20dBm outputs and claim they all meet ETSI
and FCC regs. I dunno about that.

Military ELMR equipment is authorized for 380-399.9 MHz.
Garage door openers that operate low power unauthorized in the same band are sometimes messed up.

Wonder if the military or the garage door opener company will win...

"End-Fed Center-Fed Dipole (AKA Coaxial Vertical Dipole)

Really, that description is correct. Primarily constructed with coaxial
cable the one half wave vertical dipole is fed from its bottom but the coax
shield is left in place only up to near the center point (about � wave but
the exact end point for terminating the shielding is determined by tuning)
which becomes the actual "feed-point" ergo, the description. The center
conductor continues up for about � wave past the point of termination of the
shield." From:
http://forums.qrz.com/showthread.php?286554-End-Fed-Center-Fed-Dipole

Are the wires equal or unequal?
Is it dipole, monopole or "dipole"?

12 nw is -49 dBm. Why are you still using 12 mw?

The antenna would have to have -69 dB gain for 100 mw to radiate 12
NANOwatts.

so depending on the equation in :
http://tinyurl.com/c86y6q6
i should make the power the much larger i can but not more than 10mw
and so for the gain , and decrease the E (v/meter)....
thanks

Reminds me of the garage door hack.

At midnight, from a nearby hill, where you can oversee the whole city,
transmit with a few hundered watts all the door opener codes
in sequence. Use a software to feed the signals.

But even worse and the utmost of all evils, is the Dildo Hack.
You know they have remote controls also.
Every light that comes on in the city after your transmission,
is a feedback of success.

w.

What in the hell are you babbling about with "one chapter" and "next"?

> But it means only that you do not know what the light is.

Everyone but you knows what light is.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about anything.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on anything
in any language?

Is it because you are too stupid to be able to understand the material?

They jump off from the end (corona) after the time equal to speed of light.
They do not flow from the transmitter to the end of antenna. They kick the
next ones. It is the oscillatory flow.

> I can crawl on my knees faster than electrons flow in a wire and that has

The papers of Giants are now available. Try to compare the papers by
Heaviside-Pointing and Dirac.
Dirac was an engineer so he was tought on Heaviside-Pointing's EM. Dirac
never even mentioned EM.

Ia trying to pull you from the textbooks (where all is simplified) to the
paper of Giants.

Not exactly. When adding a bigger antenna, you will need to decrease
the transmit power to keep the field strength (V/meter) constant.

For example, assume that +12dBm tx power and 0dBm (unity) gain antenna
is the maximum legal. If you replace the unity gain antenna with an
+8dBi gain yagi, you will need to reduce the transmit power down to
+4dBm output to stay withint the maximum field strength requirement.

Note that you can calculate your maximum range if you know the various
numbers.

The 12mw is correct.  The -46dBm was my mistake.  It should
have been about +10.8dBm.

Nope.  Use 12 milliwatts or 10.8dBm please.  Loose the -46/49dBm.

Irrelevant to anything to do with the nature of light other than to show light and radio waves have the same properties.

> You wrote "latest theories that support the latest experiments are the best
> "knowledge" that we have so far".
>
> But there are plenty of theories. Which one is the best?

Generally, the latest ones which have more experiments and data to back them up.

> To have knowledge means know the facts not theories.

To be Szczepan Bialek means to be an ignorant, ineducable, moron.

You are an ignorant, babbling, ineducable idiot who knows absolutely NOTHING about antennas or how they work.

You don't even understand what an antenna is or the difference between an electric field, a magnetic field, and an electromagnetic field.

An antenna is a device that converts the AC electrical energy at it's teminals into electromagnetic energy which radiates from the antenna and also coverts the electromagnetic energy which antenna intercepts into AC electrical energy at it's terminals.

A rectenna is simply an antenna with something that acts as a diode at it's terminals to convert the AC to DC.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on anthing in any language?

Is it because you are too stupid to be able to understand the material?

You haven't the slightest clue what any of this means.

> Are the wires equal or unequal?

A stupid question from a moron that doesn't have the slightest clue
what any of this means.

> Is it dipole, monopole or "dipole"?

There is no difference between a dipole and a "dipole".

The antenna in question is a monopole with a complex feed system.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about anything.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on anything
in any language?

Is it because you are too stupid to be able to understand the material?

No, it does not mean that.

There are no jumping electrons involved in radiation and you are an ineducable idiot.

>
> In Faraday time no such meters but Faraday had know that electrons (nuclei)

I looked at my antenna the other day while I was talking. I saw some
jumping off. Szczepan has been right all along. Or maybe it was bird do
do I saw falling. Anyway, something was coming down from my antenna.

Michael

Me too but I know what it is; the insulation from the cheap Home Depot house wire I used to make the antenna.

The damn insulation is hard to strip off when it is new but falls off all by itself after a couple of years in the sun.

I highly doubt most doctors have any knowledge of the floor cleaning
products available on the market or their efficacious.

Maybe the insulation is falling off because of all the electrons that
have tried to jump off the wire when you were transmitting, and became
trapped inside the insulation?

Unless you were in a very small operation or talking about REALLY ancient
times, engineers as a general rule never did mundane tasks.
```

Those were left to other, lesser paid people, like technicians, draftsmen,
and typists.

No one in their right mind would pay an engineer to build and test a
prototype, draw up the formal schematics, or type up the documentation
when there are other people who could do that faster and at a much lower
hourly rate.

> before you can hear it.

Most of the places I worked, the testing was done by techicians who
wrote up a test results report for the engineers and the engineers
only got involved if something was hinky in the test results.

> The currents consists of electrons.

Sorry, electrons cannot move fast enough to support RF current which cannot=
 flow inside a wire. The RF EM wave flow is supported by photons moving at =
the speed of light in a cloud surrounding the wire.
=20
> Does it means that the electrons jump off from the end of the radiator?

Electrons are known to "jump off from the end of the radiator". It's called=
 corona and it is visible at night. Fortunately, it happens only under spec=
ial conditions because that energy is not coherently radiated, i.e. not use=
ful for anything except melting the ends of an antenna.
=20
> In Faraday time no such meters but Faraday had know that electrons (nucle=
i)=20
> jump off from the end of the open circuit.

Yes, arcing is a common occurrence. Unfortunately, nowadays it is useless (=
and illegal) for RF communications. BTW, nuclei is plural for nucleus and t=
here are no electrons in the nucleus.=20

Your antennas are the diwire.
From the radiating wire the electrons jump off and penetrate into the
counterpoise wire.
 It would be interesting to know if is any difference in behavior of the
different wires.

Hello Szczepan.
"Diwire"? What's that?
"From the radiating wire the electrons jump off and penetrate into the
counterpoise wire."
Sounds like a rather short circuit. Not much chance of a QSO.

Regards, Ian.

From experience we all know that there is no difference between te
behaviour of insulated or blank wires when used as an antenna.  We use
what is convenient.
This sort of contradicts your claim that electrons jump off the wire,
```

as this would not work as well with an insulated wire as with a blank wire.

Before melting the end is lighting. Before shine it is hot. In the all
stadiums the electrons jump off (from transmitting antennas).

>> In Faraday time no such meters but Faraday had know that electrons
>> (nuclei)
>> jump off from the end of the open circuit.

>Yes, arcing is a common occurrence. Unfortunately, nowadays it is useless
>(and illegal) for RF communications. BTW, nuclei is plural for nucleus and
>there are no electrons in the nucleus.

In Faraday time no nucleus. Now the Faradays nuclei have name electrons.
Maxwell name is "electric particles".
All of them are in space. The last names are "Dirac electron sea" and the
"rare plasma".

Hello Szczepan.
I am a tad concerned that atoms in Mr Faraday's time didn't have the
nucleus. I wonder when the nucleus was added to the atom, who added it and
how much power was needed for this nuclear (fusion?) work.

I think we may be wearing out Mr Bialek's circuits. A lack of electrons,
perhaps? Didn't he have problems with insulators which didn't insulate.

May I suggest a new newsgroup for these postings? Something along the line
of rec.radio.amateur.humour ?

73, Ian.

What do you mean by "Your antennas"?

An antenna is an antenna, there is no yours, mine, and theirs.

What is "diwire"; there is no such word in English?

If you are trying to babble about the construction material of and anteena,
the material used only effects the ohmic losses of the antenna.

> From the radiating wire the electrons jump off and penetrate into the
> counterpoise wire.

There are no electrons jumping anywhere.

You are an ignorant, babbling, ineducable, idiot.

> It would be interesting to know if is any difference in behavior of the
> different wires.

It would be interesting to know if you will EVER be able to understand
anything.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong?

In English the Ham dipole is the same as the two wires where one is
connected to the live conductor and the second to the bride.
In Polish the Ham dipole consist of the radiator and counterpoise.
So the correct name for such aerial is "diwire".

> "From the radiating wire the electrons jump off and penetrate into the
> counterpoise wire."
> Sounds like a rather short circuit. Not much chance of a QSO.

From Maxwell time all circuits are closed (displacemment current).
See at that: http://educypedia.karadimov.info/library/Dipolentstehung.gif

The short circuit would be if the radiator and the counterpoise are close to
itself.
They are in such cofiguration in the transmitting line.
Have you QSO with the line alone?
S*

As you know the insulators do not stop the "oscillatory flow of electrons"
(radio waves) at your frequency.

But you can order in NASA proper insulator.

> the people that have successfully built hundreds that they are all wrong?

Each area has their own language.
Simply same of you do not know that "dipole" is a radiator and counterpoise.

So you are right that the "dipole" do not need the ground.
Do not need, because the ground (counterpoise) is the integral part of the
"dipole".

In summary Marconi is right.

The whole knowledge on waves are now the top secret.
In place of the knowledge are the Heavisde's equations.

But the fundamentals are now on line.
In XIX century scientists were sure that everything on electricity and waves
are explained.
Now the microphysics is a top secret.

Hello Szczepan.
Oh dear! A dipole is a dipole regardless of the country in which it is used, be it the UK, the USA or Poland. Seems that you still do not understand a dipole.

If you want to believe that radio hasn't progressed since the days of Marconi then that is fine by me. You'll be wrong but I can live with that.

Regards, Ian.

Radio waves are NOT "oscillatory flow of electrons", you babbling, ignorant, ineducable, idiot.

> But you can order in NASA proper insulator.

NASA is not a store and you can not order anything from NASA, you babbling, ignorant, ineducable, idiot.

How many antennas have you built in your lifetime?

I remember well that in the past the domain nasa.com was in use by
some mail order store.  I don't know if that store still exists, it
seems difficult to find any details about it.  The nasa.com domain
now appears to be in the hands of a cybersquatter.

(of course the domain for the National Aeronautics and Space Administration
is nasa.gov, but I doubt you can order insulators there)

There is no "Ham dipole", there are only dipoles.

There is no "live conductor" and there is no "bridge".

> In Polish the Ham dipole consist of the radiator and counterpoise.

There is no "Ham dipole", there are only dipoles.

A dipole does not have a counterpoise.

> So the correct name for such aerial is "diwire".
```

Pure babble.

True for most companies, but not true for every place that I've worked. One such small company made it a point of having the engineer personally perform every step of the production cycle from incoming inspection to shipping. At some point, I did incoming inspection (QA), parts stuffing, wave soldering, lead trimming, final assembly, cable harnesses, production test, QA test, burn-in setup, and shipping. There was no attempt utilize expensive engineering talent for these jobs. It was a very necessary learning experience that paid off handsomely in improved efficiency. It's one thing to stand aside and just watch someone do their job. It's quite another to actually sit down and do it. For example, we had a small 3 turn coil that was hand wound on a form. Production people could average about 5 coils per hour, which stunk. I sat down for several hours, made numerous changes, found numerous problems that nobody bothered to identify, and was able to crank out about 40 coils per hour. However, my fingers felt like they were going to fall off after about an hour. This wasn't going to work. The experience was sufficient to justify the design and construction of an automatic coil winder, that could do about 200 coils per hour.

When I worked for larger companies, I did much the same thing. I experienced some initial resistance but got the attention of production by breaking a few rules, but which dramatically improved efficiency. I arranged to have the drawings and assembly instructions translated into several languages. While assemblers were expected to know English, they were not proficient in technical English. From then on, the suggestions and changes came quickly. Unfortunately, I still had products to finish, but was allowed about 25% of my time to do the production engineering function.

An engineer (or manager) that sits behind a computer, never leaves the office, never sits on the production line, never understands how things are built, and never has an understanding of anyone elses job, will eventually make some rather nasty mistakes. Using engineering talent for these functions is not a good idea for extended periods, but is a good idea for the short periods needed to gain the necessary experience.

Incidentally, in the distant past, one of my consulting jobs was cleaning up the computerized RF board layouts produced by an assortment of PCB designers, that didn't seem to understand that RF travels in roughly straight lines, and that bypassing requires a low impedance ground, not a mass of spaghetti wiring.

>Most of the places I worked, the testing was done by techicians who
>wrote up a test results report for the engineers and the engineers
>only got involved if something was hinky in the test results.

Likewise. Unfortunately, production test was reluctant to call engineering for help because we would tend to be rather disruptive. When I had to fix things using paper reports (usually incoherent) and ECO's (engineering change orders), it took much longer and many tries to fix it correctly. When I sat down and saw the problem for myself, it was usually fixed the first time, and usually without attendant piles of paper going in both directions. I couldn't do much of that at larger companies, but when I was asked for an overnight solution, that was the only way.

Hello chaps.
Szczepan thinks that "NASA" is a store, like Radio Shack. He may be the sort of person who thinks that the Bank Of England is an ordinary commercial bank (I get spam purporting to be from the Bank Of England and asking me to verify my account).
I also suspect that Szczepan is happy to sit at a keyboard, type some nonsense and watch how we respond.
I'll happily help anyone who is willing to listen/read and learn but Szczepan clearly is not capable of, or does not wish to learn. I could also take his odd views as being indicative of someone "not quite with it". There are other things which can be inferred ... but not on a public newsgroup.

73, Ian.

I call bullshit.  You can order lots of things at the National Aeronautics
and Space Administration.   It is primarily promo material.

As I keep saying, I'm convinced that Szczepan is thinking of a situation where a dipole fed directly with coax. He may have seen diagrams which show this, and they have become fixed in his mind.

Then, because the coax is (usually) grounded at the TX end, he believes that the leg of the dipole, which is connected to the coax screen, is also grounded - and therefore it serves the function of a counterpoise - like you might use in a situation where the antenna is a directly-fed end-fed wire situations, and it is not possible to get a good ground connection.

In a way, Szczepan is sort of right. Consider the situation where a dipole (no balun) is connected to the TX via essentially zero length coax, and the TX chassis is not well grounded. [For example, possibly there is a physical safety ground connection, but it is too long to be effective at RF.] The 'ground' side of the of the dipole would indeed function as a counterpoise, which might - or might not - radiate effectively (depending on its height, its physical relationship relative to the 'live' leg etc).

Now increase the length of the coax. At some stage, we would no longer consider the 'ground' leg as a counterpoise, and think of it simply as the other leg of the (directly connected) dipole.

However, while Szczepan may have a point if he is thinking of a directly-connected dipole, he is obviously talking total nonsense if he is referring to a dipole fed via a balun, or from a balanced tuner via twin feeder. I fear that he is incapable of taking a rational, lateral view of things, and therefore will continue to repeat his essentially incorrect mantra.

I prefer to think of the do-do. Keeping birds off aerials could be a
rewarding topic. I think the pigeons that perch on my HF beam nibble at the
trap end caps. Not good news.

73 Ian.

Hey it is not all babble. I had my bride hold one end of my dipole once for a quick check of SWR. It sounds as if I would get out a lot better if I had her up there holding one end all the time. The bad news is that she said she was not going to help me any more with climbing trees and fastening my antennas. She has done this for me for 50 years and now suddenly she gets cold feet at going up in a little 90 foot fir tree. What they say is true, "nothing good lasts forever".

She helps with antenna construction but will not climb a tree. I don't know if this is legal grounds for divorce in Michigan. If it is, I could show her the statute and ask her again about that 90 foot tree I want her to climb. She started climbing trees for my antennas when she was 11 years old. How could she stop now????

Michael

Hello Michael. Over here, in the old country, we attach the wire to a sapling and we wait. We're good at waiting. As the sapling grows we pay out a little more wire. Eventually, we have our wire at the height we want. Caution - if your bride offers to climb a tree for you, do not let her carry anything heavy.

Stay away from the tree. Wear a hard hat. Tell her that your life insurance does not pay out for injury or death due to falling objects (for falling objects are due to gravity and that's an act of nature).

73, Ian.
ps. It has been unduly sunny over here to-day. The sun affects we Brits as we don't see it very often. In fact, it's probably easier here in Britain to see an electron shoot past than to see the sun.
73 agn.

Hello Michael. Over here, in the old country, we attach the wire to a sapling and we wait. We're good at waiting. As the sapling grows we pay out a little more wire. Eventually, we have our wire at the height we want.
Caution - if your bride offers to climb a tree for you, do not let her carry anything heavy. Stay away from the tree. Wear a hard hat. Tell her that your life insurance
does not pay out for injury or death due to falling objects (for falling objects are due to gravity and that's an act of nature).

73, Ian.
ps. It has been unduly sunny over here to-day. The sun affects we Brits as we don't see it very often. In fact, it's probably easier here in Britain to see an electron shoot past than to see the sun.
73 agn.

Ian, I am pretty advanced in years. I am 69. I can remember a comedian
whose name escapes me. He got paid good money for coming on stage and
talking just like Szczepan. I think it would be a gas for him to address
```

a large gathering of amateur radio operators. He could have us all in stitches in a few seconds.

I get a fair amount of entertainment value just reading his posts. Some of them are laugh out loud moments for me. I don't know whether his is truly that ignorant or is just having fun with us. It doesn't matter. He is funny.

BTW Szczepan, I have a loop antenna for low band. The electrons go around in a circle and I recycle them. This saves a huge amount on my electric bill.

Michael

Hello Michael. From where I am sitting, 69 isn't all that old. I have
friends heading for 90 who are definitely not showing their age.
Was the comedian a Brit named Stanley Unwin or an American named Fred ???
73, Ian.

What part of "general rule" and "commercially available" do I need to
explain to you in minute detail?

How commercially available is promo material for NASA?

Can I get it at Walmart?

I think he is totally unable to understand that an antenna and a transmission
line are two different things.

> Then, because the coax is (usually) grounded at the TX end, he believes

> to the 'live' leg etc).

That does not change a dipole into anything other than a dipole.

Feeding an antenna with any transmission line ill suited for the antenna
will of course lead to unwanted currents which will radiate to some
degree.
```

However, the antenna is defined by the geometry of the antenna and the transmission line does not change the radiation of the antenna unless you are doing something really stupid like taping the transmission line to one of the elements of the antenna, which changes the antenna geometry.

Feeding an unbalanced load such as a ground plane with balanced line will also lead to unwanted currents which will radiate to some degree, but the ground plane antenna is still a ground plane antenna.

It appears to me that someone has been reading too many Wikipedia articles - especially the ones that I wrote a long time ago. Not to mention too many old editions of S9 and CQ magazine.

In the mid 60's - we talked about Tower Lighting - where the energy emitted from the antenna was being asorbed and reflected and radiated by the tower - which technicially was being electrostatically charged.

This was also the reason why HY Gain came up with the little egg beater / colineariator on top of their vertical antenna's such as the Super Magnum 117..

I think someone forgot to give Sheldon his medications today and he has gotten a little out of hand and the other techo geeks on this forum decided to attack.

Would everyone please take a chill pill and just calm down and relax.

I'm sure you can display your Pedant knowledge to someone a little less bright then you, say maybe the check out girl at the grocery store or the guy that pumps your gasoline into your vehicle at the gas station.

Dear Neighbor,

=20

      Something important:

=20

      While going through some files, we=92ve been fortunate to have

  the opportunity to review some of our customers=92 old insurance policies=
.=20

=20

      Here=92s what we discovered: Over the past few years, many insurance

  rates have actually gone down.=20
=20

=B7 More types of insurance are available
             You can get specific coverage - insuring just

     what you need - which provides a lower rate.

=20

=B7 More deductibles are now available

     Smart options in deductibles can save you plenty!=20

  =20
=20

=B7 More options in coverage amounts are available=20

     Get rid of excessive coverages and save even more!

=20

=B7 Additional Savings are available for meeting specific requirements

     For example, if you=92re a good driver, we have added bonus

     savings for you with our good driver rates. =20
```

```
=20

=B7 You can often lower your premiums with broader coverage

     Everyone wants your business. When you place more insurance,

     (car, home, life, business)  your overall premiums

     can go down. =20

=20

      We=92ve made a lot of friends - by saving people money. Here=92s

  what we=92d like to do for you:   While we can=92t guarantee every client

  will save money, the chances are great that we=92ll SAVE YOU MONEY.

Please see my website http://insuranceinformationtoall.blogspot.com=20

  reviewed in a while.=20

  thinking of it!

      Thank you.

              Kindest regards,

It is not true for every R&D place.

There no "draw up the formal schematics, or type up the documentation"

The each prototype is simmillar to something older.
The R&D people take the copy of the simmillar documentation and change the
identification number and dimensions, materials etc..
The new prototype documentation is ready in a few hours.

It is obvious that you was working in R&D places.

If a prototype is a succes then the formal documentation is made by another staff.

"I prefer to feed them directly with coax at a corner and situated in a

diamond configuration when hung verticle but, you can feed them in the center of either side.
"A little known fact is that you can add a half wavelength of wire behind the loop instead of the closed loop. This comes in handy where supports are not abundant."

From: http://ku4ay.net/loop.html

The electrons oscillate in the loop and collide in the nodes.

In that places the voltage is doubled and the electrons jump off.

Somebody wrote here that the current radiate.

In all AC circuits the same current if flowing in the live conductor and in the ground (return).

Can 0V radiate?

In Poland is ignorant morons that know nothing about electricity babbling
stupid nonsense.

In the rest of the world it is as described above, i.e. there is no current
flow into ground unless something is broken.

Maybe in Poland everything is broken.

>> The earth ground connection is for safety and current will only flow if

> What the things are in your country?

Like all the rest of the world except Poland where nothing works correctly.

If you actually knew anything about electricity, which you don't, you would know that under normal circumstances there is no current in the earth ground connection.

I did something you are incapable of doing; I looked up the electrical
distribution system in Poland.

The distribution system in Poland is the same as the rest of Europe
and conforms to IEC 60446, which means, you babbling idiot, there is
no current in the ground connection unless there is a fault.

You are an ignorant, babbling, ineducable idiot that knows absolutely
nothing about anything related to electricity.

Eveything you post is stupid, utter, nonsesne.

It is not easy to describe it.
But in Poland the amateur-radio dipoles consists of the one radiator and the
counterpoise.
Simply speaking it is the Marconi antenna with the one radial.

Good morning Szczepan.
Oh dear! No, in Poland (and everywhere else for that matter) a dipole does not consist of a radiator and a counterpoise. An aerial of that description would not be called a dipole. I said this in a posting back on 8th July.

I shall have to doubt your claim of being "here to learn". It seems to me that all you intend to do is repeat statements which you believe are true and which the rest of us know to be false.

Over a period of several months you seem not to have made any progress in understanding the dipole which is a basic aerial. I suggest that, instead of wasting your time on this newsgroup, you visit an amateur radio station or acquire a book on basis aerial theory. As I wrote in my posting of 8th July: The ARRL (http://www.arrl.org/shop/Antennas/) and RSGB (http://www.rsgbshop.org/acatalog/Online_Catalogue_Antennas_37.html) both sell helpful books on aerials.

I hope you are able to understand this posting.
Best wishes, Ian.

ps: To the other Ian - yes, S* could be a computer program but I thought the purpose of the Turing test was to simulate a human being. S* seems incapable of learning. I wouldn't discount your theory but I also think that S* could be an elderly person who has poor short term memory or could be a young person having a (protracted) laugh or could be an alter ego of one of the people who posts replies. I can't tell which is correct but I am happy to try to help in a courteous and respectful manner. 73, Ian.

Yes. The leakages are also unsymmetric:
"Coronas may be positive or negative. This is determined by the polarity of the voltage on the highly-curved electrode. If the curved electrode is positive with respect to the flat electrode we say we have a positive corona, if negative we say we have a negative corona. (See below for more details.) The physics of positive and negative coronas are strikingly different. This asymmetry is a result of the great difference in mass between electrons and positively charged ions, with only the electron having the ability to undergo a significant degree of ionising inelastic collision at common temperatures and pressures."
From: http://en.wikipedia.org/wiki/Corona_discharge

In a power lines are also the counterpoise:
"Overhead power lines are often equipped with a ground conductor (shield wire or overhead earth wire). A ground conductor is a conductor that is usually grounded (earthed) at the top of the supporting structure to minimize the likelihood of direct lightning strikes to the phase conductors. The ground wire is also a parallel path with the earth for fault currents in earthed neutral circuits. Very high-voltage transmission lines may have two ground conductors."

The only difference between country are the textbooks.
You should know that before the IIWW in the Soviet Union, Germany and US were quite different phisics.
Now are the same in the whole "free" world but the older books are also avaiable.

Hello chaps. I've solved the puzzle of the what S* is. He's an out-of-work
comedy writer.
He says that in Poland they have a power supply that
 operates with corona discharge as normal (I assume into the house) and
 operates with lightning strikes as the norm.
Of most interest to us all will be S*'s assertion that physics varied from
country to country before WWII. Anyone know (or care to guess) who unified
physics around the world?
It's dull and drizzling here in my part of the UK. That posting from S* made
me smile so it did have a positive use (pun intended).

73 to all, Ian.

I want to run two or even three QRP (200mW) HF beacons to one antenna. Is it possible to build a duplexer to combine 8M and 40M or 30M and 40M or 30M and 20M. Does anyone have a pointer to a web site where I might get some tips?

Sure you can and the power is not limiated to QRP either. There are two
ways to go about it. Band pass filters or low pass/high pass filters. Look
up diplexers.

Here is an example and may be close to what you want.

Hello, and I would just add that while hams tend to use "duplexer" a lot
of others use "diplexer".  Just something to keep in mind for Google et
al searches.  Sincerely, and 73s from N4GGO,

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about antennas or how they work, or for that matter, anything
else.

A dipole is a dipole whether it is used by a Polish amateur or a Tibetan monk.

You don't even understand what an antenna is or the difference between an electric field, a magnetic field, and an electromagnetic field.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics in any language?

Is it because you are too stupid to be able to understand the material?

> earthed neutral circuits. Very high-voltage transmission lines may have two
> ground conductors."

As you have been told several times, the earth ground in an electrical
distribution system is for safety if something goes wrong or breaks.

On of the things that can go wrong is lightning striking the wires.

> The only difference between country are the textbooks.

The difference between the textbooks is the language they are written in.

> You should know that before the IIWW in the Soviet Union, Germany and US
```

> were quite different phisics.

No, you babbling moron, the physics was ALWAYS the same; it was the politics that was different.

> Now are the same in the whole "free" world but the older books are also

Not picking on you, but here we go again with that damn diplexer\duplexer thing. Even the people that make them will sometimes call the diplexer a duplexer. Just look at the ads in the ham catalogs. I do know the differance, but the terms have been used wrong so much that it is no use trying to correct them here.

Maybe we can get Szczepan Bialek to chime in here so the thread can reach about 50 messages about the differance.

Are the electrons flowing into the diplexer?  Do the diplexer have
the counterpoise?  What did Marconi write about it?

Diplexer?
Duplexer?
Complex-ier?
:-)

Couldn't resist. It's a dull, damp day here in the UK. Someone will make a
lot of money selling souvenir umbrellas to the Olympic crowds.
73, Ian.

"Outside this region of ionization and conductivity, the charged particles
slowly find their way to an oppositely charged object and are neutralized."

As a normal in the all country is leakage. Corona is from time to time.

"Physics, Electricity . the loss of all or part of a useful agent, as of the
electric current that flows through an insulator"

In overhead power supply the air is an insulator.

The both (corona and leakage) are nonsymmetric in AC.
So the ground is the only remedy.

The definitions I've found generally seem to say a duplexer isolates two
ports on the same, or very close to the same, frequency and that a diplexer
isolates two ports on different bands.

The definitions I've found also generally seem to say a circulator is a 3
or 4 port device in which a signal to a port is directed to only the next
port in order and says nothing about frequencies. And, as you said, is
often used at microwave to act as a duplexer.

I would guess the definative definitions would be what the IEEE dictionary
says, but I don't currently have access to that.

Hello Szczepan.
Neither you nor I would want to be near any "leaky" insulator. You appear
not to understand the definition and meaning of "insulator". Your past
behaviour indicates that there is no pint in trying to explain it to you.
All I will suggest is that you try to acquire and read a textbook on the
subject.

Regards, Ian.

That is yet further evidence that he is on another world (if not even in
another universe) where the Laws of Physics are quite different from
here. Maybe that's why I was subconsciously prompted to ask him what
colour the sky was in his world.

Yet more babbling gibberish from our resident Polish clown who hasn't a
clue what his quoted material actually means.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about antennas or anything else for that matter.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics in any language?

Why can't you obtain and read a university level textbook on electricity in any language?

Is it because you are too stupid to be able to understand the material?

What means "here"?
All the Laws of Physics I "cope and paste" from Wiki. I am in "Wiki's
world".

> Maybe that's why I was subconsciously prompted to ask him what colour the
> sky was in his world.

You are fluent in English.
Write the color in "here" and I tell you if in the Wilki world is the same.

>tips?

If you check the web sites for the various beacon networks, NONE of them transmit on more than one frequency at a time. The transmissions on each band are done in rotation. You do NOT need a duplexer, diplexer, perplexer, or antenna tuner.

The danger in transmitting simultaneously on multiple bands at the same time is intermod mixing generated in the final stages of your transmitter. Ask Field Day operators for how that works. For a beacon, all you need is a multiband antenna of some sorts and a uP controller to change bands and frequencies according to a set pattern.

<http://www.ncdxf.org/beacon/photos/index.html>
Contact anyone involved in the network for details and horror stories.

Hello chaps. To-day's prize goes to all of you who said that Szczepan didn't
understand what he was putting in his own postings. The prize is 1,000
electrons and you'll find them here  *
It's up to you to extract them. :-)
73, Ian.

No, you are in your own little world.

You have no understanding whatsoever of anything you get from Wiki.

Your post from Wiki are always followed by stupid, ignorant comments that
prove have no understanding whatsoever of anything you quoted.

> S*

He is semi-politely telling you that you are in your own little world of
stupidity and ignorance.

# It is not easy to describe it.
# But in Poland the amateur-radio dipoles consists of the one radiator and
the
# counterpoise.
# Simply speaking it is the Marconi antenna with the one radial.
# S*

One suggestion is that you talk with some technically competent people in
Poland and describe your definition of dipoles.

Most likely, they will not agree with your definition.

hi
i'm just new to this field and i need some help on it and i appreciate
any help...
my aim is to make a 315 or 433 transmitter and receiver so what ics is
the best for that and where can i buy them and so for the antennas(but i
would like to build them)...
thanks

For me it is enough the difference Hertz dipole/radio amateur dipole.
"diplexer\duplexer" continue without me.

Anyway, do you know the difference Hertz dipole/radio amateur dipole"

S*

Air is the "leaky" insulator.
I was many times under the 400kV line and I am still alive.
Is it dangerous in UK.

You probably do not know the difference leakage/breakdown.

Instalacja anteny dipolowej sklada sie z:
- anteny - promiennik i przeciwwaga, kt�re sa zbudowane z dw�ch jednakowych przewod�w, lub kawalk�w metalu. Z racji tego, ze oba te elementy sa identyczne (ksztalt, material, dlugosc), maja takie same parametry - sa symetryczne.
- przewodu zasilajacego - kabel koncentryczny, w kt�rym sygnal przesylany jest przez zyle wewnetrzna a powraca oplotem ekranu. Oplot i zyla wewnetrzna maja inny przekr�j i ksztalt, a co za tym idzie maja inne parametry elektryczne (np. impedancje) - sa niesymetryczne. "

And Bilou wrote: "Imagine the diameter of one half is infinite.
You now have a quarter wave over a ground plane.A well known case."

As you see in Poland and "here" are the technically UNcompetent people.

Do you see the difference between the Hertz dipole and the radioamateur dipole?

Try pasting this into Google Translate.
http://translate.google.com/#
Even allowing for the oddities, it's interesting to see the description.

"Installation of a dipole antenna consists of:
             - Antenna - radiator and counterweight, which are built from
two
the same wires, or pieces of metal. Because of this, with both elements
are identical (shape, material, length), have the same characteristics - are
symmetrical.
             - Power cable - coaxial cable in which the signal
transmitted by wire inner braid and returns the screen. Braid and lived
inner diameter and have a different shape, and thus have different
electrical parameters (eg impedance) - are unbalanced. "

73, Ian (no, the other one).

Yet more babbling nonsense with no understanding of the text you have
quoted.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about antennas or how they work.

You don't even understand what an antenna is or the difference between
an electric field, a magnetic field, and an electromagnetic field.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics
in any language?

Is it because you are too stupid to be able to understand the material?

There is not such thing a "radio amateur dipole", you babbling idiot.

A dipole is a dipole whether it is used by a radio amateur or a Tibetan
monk.

You are an ignorant, babbling, ineducable idiot who knows absolutely
NOTHING about antennas or how they work, or anything else for that
matter.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics
in any language?

Is it because you are too stupid to be able to understand the material?

is it a straight wire or curved ? shouldn't i look at it's impedance and
make matching with it ?
what about it's ICs

```

If you want meaningfull replies, you need to ask meaningfull questions.

What do you intend to transmit, modulation type, power levels, etc.?

That fields and the gravity are only in the textbooks (as e sperate
chapters).
They are also in engineering.
In physics is only one field.
Do you thing that in space are the seperate mechanismus?

Do not write that the charge at rest create the electric field and if it
travel it create magnetic field.

The antennas work according to physics law.
>

Electromagnetism was the hipothese proposed by Maxwell. But Royal Society
discarded it.
Have sense read it?

Everything you just wrote is a babbling pile of nonsensical, meaningless, gibberish.

You are an ignorant, babbling, ineducable idiot who knows absolutely NOTHING about anything.

You don't even understand what an antenna is or the difference between an electric field, a magnetic field, and an electromagnetic field.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why can't you obtain and read a university level textbook on electromagntics or even basic electricity in any language?

Is it because you are too stupid to be able to understand the material?

Why do you continue to post your stupid nonsense?

Not to be a smart ass but weren't a lot of the old British cars
equipped with a positive ground? What's up with that?

The electrons come out of the negative end of the battery. The Old Brits were smart. They didn't want the electrons to jump off of the ends of the cars, so they tied the positive ends of the batteries to the car chassis. Except for those cars they exported to Poland ;-) .

I think it had something to do with the cars driving on the left side
of the road...

Either that, or it rains so much in the UK the electrons that would
normally jump up are washed down by all that water so you have to put
the negative side up to capture the electrons...

The fun part of owning one of those cars was watching panic on someone's
face when you got a jump start and hooked the jumper cables up backwards.

That is why it only radiates when the currents do not flow in the
opposite direction!

So, a balanced feeder line with two parallel wires carrying the HF current
(in opposite directions) does not radiate.

But in a dipole antenna, the currents in the two wires do flow in the
same direction.   So a dipole radiates.

Wrong. I worked for several manufacturers as an employee and as a consultant. There was no R&D and I have never done any R&D.

>If a prototype is a succes then the formal documentation is made by another
>staff.

I never produced any formal documentation at any company. I did what was needed to get a product into production and occasionally to scribble something for trade journals and advertising.

The prototype and documentation were a parallel effort in order to save time. It was quite common to do the prototype in stages, with sections of the design being frozen before the final product had been tested. This allowed some of the documentation to be completed before the prototype was completed.

The closest approximation of something formal were two radio direction finders for the US Coast Guard. The documentation was done by a professional tech manual writer. I wrote most of the raw text and sketched some of the drawings.

Sorry, there are two currents, forward and reflected, flowing in opposite d=
irections on a standing wave antenna. A 1/2WL dipole is a standing wave ant=
enna where the SWR at the ends is infinite and the SWR at the feedpoint is =
~20:1. There is forward and reflected wave energy flow on each element of t=
he dipole. At the ends of the 1/2WL dipole the forward and reflected curren=
ts are 180 degrees out of phase and equal in magnitude so they phasor add t=
o zero, i.e. a standing wave current minimum (null). Since the forward and =
reflected current phasors rotate in opposite directions, they are in phase =
at the feedpoint and phasor add (constructively interfere) to a standing wa=
ve current maximum (loop) and most of the radiation is from the center of t=
he antenna.

The feedpoint impedance of a dipole is Zfp =3D (Vfor+Vref)/(Ifor+Iref) phas=
or math.

> The R&D people take the copy of the simmillar documentation and change the
> identification number and dimensions, materials etc..
> The new prototype documentation is ready in a few hours.

More utter nonsense.

> It is obvious that you was working in R&D places.

No, to someone that actually knows something, it is obvious he was mostly working in places that manufactured products.

> If a prototype is a succes then the formal documentation is made by another
> staff.

Formal documentation is usually produced by a tech writter with inputs from
engineering and marketing.

Well, now we have another subject that you know absolutely nothing about
and just babble nonsense.

You really are a babbling, ignorant, ineducable, idiot.

Utter, meaningless, babble.

> Can 0V radiate?

Voltages don't radiate; you are a babbling idiot.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all
the people that have successfully built hundreds that they are all wrong
and you don't want to admit you are an ignorant, inducable, idiot?

Stanley Unwin's your man. Before he became a comedian, he was a BBC
transmitter engineer, so he was one of us...

http://www.stanleyunwin.com/home2.htm

By us, of course, I don't include Szczepan. My feeing is that he's
either :

1 Far gone with senile dementia OR
2 An academic troll who's been winding up Usenet groups for years

I think (2) is more likely - dementia is progressive, and I'd expect
Szczepan's ramblings to get gradually more and more incoherent. Instead
there is a strangely consistent quality to them.

Anyway, I killfiled him years ago.

So you don't reckon he could also be a computer, programmed to carry out
the Turing Test?

>Anyway, I killfiled him years ago.

Where's the fun in that? In this sad world, we often need a bit of
light-hearted relief and amusement.

No, they don't.

You read some generalized statement about something from somewhere, then
leap to the conclusion that the statement is always true everywhere.

You read that a ground mounted, end fed monopole requires a ground, so you
leap to the conclusion that all antennas require a ground.

You read that an end fed monopole requires a counterpoise of some kind,
so you leap to the conclusion that all antennas require a counterpoise.

You read that some companies have R&D centers, so you leap to the conclusion
that all companies have R&D centers.

You are a stupid, ignorant, babbling, ineducable, idiot.

Learn this English; you are a stupid, ignorant, argumentative, babbling,
ineducable idiot.

If you really want to learn English, read newspapers, magazines, and watch
```

TV and movies in English.

> I do my best.

I would hate to see what your less than best is.

> But I do not understand why in your antennas no electrons.

That is because you are a stupid, ignorant, argumentative, babbling, ineducable idiot than instead of listening and learning argues with people with hundreds of years of combined experience.

You also refuse to read, and reread until you really understand it, any modern material on electromagnetics, whether from Wiki or University level textbooks, in ANY language.

You are a joke and a laughingstock.

Hello chaps.

Regardless of the reason for his postings, Szczepan is good for a laugh (and
I don't mean that in a nasty way) and the occasional good discussion amongst
those of us who care to think about radio and electronics.
Anyone else notice that his command of English varies from posting to
posting?

73, Ian.

If your were to read, and reread until you really understand it, any modern
material on electromagnetics, you would then know what role electons play
in electromagnetics and electromagnetic fields.

Yes, electrons are involved in electromagnetic fields, but no, electrons do
NOT jump off antenna elements.

Why are you incapable of getting a University level textbook, in any
language, on electromagnetics and reading it?

Looking at his posts from years ago, I don't see a lot of difference.

It appears his ability to learn English is just as bad as his ability
to learn anything else.

He is ineducable.

Yes Brett, it came back to me. It is so good to know he was an engineer.
  YES professor Irwin Corey. Szczepan needs to polish up his act a
little to match the professor. He is just not quite there. I suspect he
never will be. However, he is still funny, just not as funny as the
professor. God, 95 and still working, bless his heart.

Michael

Hello chaps.
Michael - thank you for the link to Irwin Corey. I've not heard of him at
all so I will spend some time watching the videos on his web site.
Best wishes to all for a good weekend. If you're coming to the UK for the
Olympics then I suggest some decent waterproof clothing.

73 Ian.

Some 110 responses have been made to the fellow who may, or may not, be in Poland. This does not count a similar number of messages from the fellow, as those are blocked.

Why, oh why, do you continue to be the mechanics described so well by Mr. O'Nella?

Stop feeding the fellow. 73,   Mac   N8TT

"Sal M. O'Nella" wrote in message news:jta8dc$3is$1@dont-email.me...

Which is why I made my reference to Allen Funt of "Candid Camera." Funt created preposterous situations and yet people tried their darndest to make something real out of it.

I recall a car with no engine whose driver rolled it downhill into a service station. The driver, Funt's attractive co-host, insisted that she had driven around town all day and wanted the mechanic to check the car because it didn't seem to have much power. In a perfect world, when the mechanic popped the hood, he would have laughed and the "bit" would be spoiled. But no! He tried eight ways to explain to her that she COULDN'T have been driving around town. She just sweetly continued the hoax as several other mechanics came over to check out the action. Classic!

Szczepan is that car with no engine and we are those mechanics.   :-)

" modern material on electromagnetics," is wrote by Heaviside"

"I remember my first look at the great treatise of Maxwell's when I was a
young man... I saw that it was great, greater and greatest, with prodigious
possibilities in its power... I was determined to master the book and set to
work. I was very ignorant. I had no knowledge of mathematical analysis
(having learned only school algebra and trigonometry which I had largely
forgotten) and thus my work was laid out for me. It took me several years
before I could understand as much as I possibly could. Then I set Maxwell
aside and followed my own course. And I progressed much more quickly... It
will be understood that I preach the gospel according to my interpretation
of Maxwell.[4] From: https://en.wikipedia.org/wiki/Oliver_Heaviside

His "own course" is without the "electric particles". In Maxwell model were
such.
What "role electons play" in antennas (not in fields)?

Hello Mac.

As I've said before, it is fun and we do have some interesting discussions amongst ourselves about aerials. I've a feeling that Szczepan is looking for the engine and we're telling him that he is looking at a trolley and not a car. Please don't push the analogy too far; some of us may say that we rolled the car downhill and Szczepan can't understand that gravity moved the car so an engine wasn't needed at all.

73 Ian.

I do not studying Maxwell, Heaviside's and his new corrected works. Jimp do
it and recommend it to me.
I am in the 21st century. It is the plazma time.

Modern material on electromagnetics was written LONG after Heaviside died,
you babbling, ineducable idiot.

<snip 100 year old quote>

> His "own course" is without the "electric particles". In Maxwell model were
> such.
> What "role electons play" in antennas (not in fields)?

The analysis of antennas is about the analysis of fields, you babbbling,
ineducable idiot.

If your were to read, and reread until you really understand it, any
MODERN material on electromagnetics, you would then know what role electons
play in electromagnetics and electromagnetic fields.

Yes, electrons are involved in electromagnetic fields, but no, electrons
do NOT jump off antenna elements.

Why are you incapable of getting a University level textbook, in any
language, on electromagnetics and reading it?

You babbling, ignorant, stupid, ineducable, idiot, I reccommended you read
MODERN texts, that is texts written LONG after Heaviside died.

> I am in the 21st century. It is the plazma time.

You are in the 19th century and "plazma" is not a word.

Why are you incapable of getting a current University level textbook, in any
language, on electromagnetics and reading it?

MODERN texts use the Biot-Savart law.
"1825 - Ampere publishes his collected results on magnetism. His expression for the magnetic field produced by a small segment of current is different from that which follows naturally from the Biot-Savart law by an additive term which integrates to zero around closed circuit. It is unfortunate that electrodynamics and relativity decide in favor of Biot and Savart rather than for the much more sophisticated Ampere, whose memoir contains both mathematical analysis and experimentation, artfully blended together. In this memoir are given some special instances of the result we now call Stokes theorem or as we usually write it. Maxwell describes this work as ``one of the most brilliant achievements in science. The whole, theory and experiment, seems as if it had leaped, full-grown and full-armed, from the brain of the `Newton of electricity'. It is perfect in form and unassailable in accuracy; and it is summed up in a formula from which all the phenomena may be deduced, and which must always remain the cardinal formula of electrodynamics.''

Electromagnetics is a piece to teach (for children).

For adults are electrodynamics. In a current University level textbook are
many chapters.
The fields are only a math tool. Completly useless for electrons.

Don't forget, this stunt was done later with a much more effective punch line. They installed an electric motor in the rear and had batteries in the trunk. She would hear that her engine could not be fixed because it was missing. She would get mad and tell them she was not going to be tricked into unnecessary repairs.

The punch line was when she rolled away and the hidden camera recorded the looks on the faces of the mechanics.

Michael

You babbling, ignorant, stupid, ineducable, idiot, Biot-Savart applies
to magnetostatics, which has NOTHING to do with how antennas work.

Jefimenko's equations are the basis of modern electromagnetic field analysis.

Jefimenko's equations first appeared in print in 1962.

<snip qoute from 187 years ago>

Yet more gibberish.

All the above is the meaningless, ignorant babble of a moron.

You are a babbling, ignorant, stupid, ineducable, idiot.

Why are you unable to obtain and read a modern, university text and
read it in any language?

OK Gentlemen: I am now more wise. Entertainment comes in multiple forms.

A question that is indirectly related to antennas: I was explaining to an attorney how the common North American 60 Hz electrical system is configured for residences (240 VAC, center taped secondary, with the neutral connected to earth and to the green wire [only] at the service entrance) He observed that in the UK he was told that schemes for supplying 240 VAC 50 Hz had earthling being done, if at all, several different ways.

So, educate us please: when we travel to the UK what are the schemes we will find. I always used an isolation transformer that was only connected while equipment was being used.

In a similar manner to what several of you have observed about yourselves, I too have had a fascination with antennas (RF type, not 60 Hz) for close to

60 years. W8JK's 1950 book was a life changer - as I expect it was for
many.

"Jackson characterizes the equations as "Jefimenko's generalization of the Coulomb and Biot-Savart Laws".

Heaviside and Jefimenko assumed that: "That a moving charge is equivalent to an electric current-element is undoubted, and to call it a convection-current. as Prof. S. P. Thompson does, seems reasonable." From: https://en.wikisource.org/wiki/Electromagnetic_effects_of_a_moving_charge

It is not reasonable. In current are many charges (electrons). No experimental evidences what the magnetic field is in the case of the one charge.

The reasonable aproach is the Faraday's:
" Whatever the view adopted respecting them may be, we can, at all events, affect these lines of force in a manner which may be conceived as partaking of the nature of a shake or lateral vibration. For suppose two bodies, A B, distant from each other and under mutual action, and therefore connected by lines of force, and let us fix our attention upon one resultant of force, having an invariable direction as regards space; if one of the bodies move in the least degree right or left, or if its power be shifted for a moment within the mass (neither of these cases being difficult to realise if A and B be either electric or magnetic bodies), then an effect equivalent to a lateral disturbance will take place in the resultant upon which we are fixing our attention; for, either it will increase in force whilst the neighboring results are diminishing, or it will fall in force as they are increasing."

Here the oscillating charge causes the lateral disturbances.
In Biot-Savart are the rotational disturbances.

Dear Jeff: Many thanks.

It is especially interesting to learn that the expectation of encountering a floating (no earthing) system is zero.

Expanding a bit on what you have communicated:
It appears that the transformer used between one phase of a HV 3 phase line and distribution "wires" is 440VAC, center tapped. The distribution "wires" to a house (or the like) are one side of the aforementioned transformer's secondary and the transformer's center tap, which is labeled as neutral. It

is expected that another house (or the like) is fed from the other side of the transformer's secondary and its center tap.

At the service entrance: one scheme connects the neutral to an earthing. An alternative (called 'protective multiple earthing' (PME)) does not connect the neutral to an earthing, but connects exposed metal in the house to an earthing. Wow! The latter scheme is expected in new construction.

It is not immediately clear what the advantage of the PME scheme might be. Your caution about RF grounds is well placed.

In the North American scheme, for the last 60 or more years, a third wire is involved - the green wire that is connected to an earthing only at the service entrance and then to touchable surfaces of an appliance. The green wire maintains what a human can touch at ground potential without relying on anything else. In sub distribution boxes, the green wire is isolated from neutral so the green wire provides a straight path for current to an earthing.

Please correct any errors that have crept into my restatement. I once had a G5 license and, in my radio astronomy days, spent a brief time at U. of Manchester.

Warm regards,   Mac   N8TT

Forgot to add that except in very rural locations the feed to premises
from the sub-station is nearly always underground.

Jeff

This is not what a 3-phase system is. What you describe is a 2-phase system.

A 3-phase system has 3 live wires, a neutral, and possibly a ground.
The 3 phases are 120 degrees apart, not 180.
Each phase has a voltage (230V here), and there is sqrt-3 times that
voltage between the phase wires (400V here).   All three phases are
used in some electrical motors and in highpower applications like
electrical heating, and one of the phases is sufficient for a normal
house connection.

Why "Wow!" ?
It is the only safe system.

Here in the Netherlands we have the same situation. Power is distributed
over 4 wires (3 live phases plus neutral) and a 5th wire is locally
distributed for safety ground. It is connected to the safety ground
connections of all reeceptacles and to metal structures in the house,
like water and central heating pipes. The neutral is only connected
to ground at the substation, and usually has a couple of volts on it
when measured at the receptacles.

Yes, but you haven't a clue what that really means.

Irrelevant to the discussion and Heaviside did not fully understand
electromagnetic fields.

> It is not reasonable. In current are many charges (electrons). No

Yes, you ignorant moron, there is LOTS of evidence about the magnetic
field of individual charges, not the least of which is the operation
of the cathode ray tube, possibly known to you as a TV picture tube.

You haven't a clue what that really means.

> Here the oscillating charge causes the lateral disturbances.
> In Biot-Savart are the rotational disturbances.
> S*

Biot-Savart applies magnetostatics, which has NOTHING to do with how
antennas work.

How many antennas have you built in your lifetime?

Why do you refuse to answer the question?

Is it because you have built zero antennas and you are trying to say all the people that have successfully built hundreds that they are all wrong and you don't want to admit you are an ignorant, inducable, idiot?

Why do you refuse to read a university level textbook on electromagnetics?

Is it because you are too ignorant and stupid to understand the contents in any language?

Dear Rob: Of course I know what a three phase system is. In North America, most high voltage (HV) is distributed using three phase. In a residential area, a transformer's primary is connected to one of the phases (with secondary producing what you call a 2-phase, 120VAC - 240VAC system). At the next house, or group of houses, down the road another transformer is connected to a different phase - and so on. Because the net power factor of a residential area is inductive, periodically one will see a platform on a pole holding three sets of capacitors each connected to a phase.

However, some businesses, farms, and essentially all industrial sites receive all three phases mostly to avail themselves of the certain torque and efficiency of three-phase-motors. [I told my students that the first rule of 3-phase is never to lock the shaft of a new motor until one verifies which way the shaft actually turns - because it will turn.]

It is most interesting to learn that in the Netherlands it is common to deliver three phase to a residence. That is a surprise. My dormitory at university distributed three phase with outlets on facing walls in some rooms being on a different phase. This facilitated fast heating of hot-dog sausages - not that I ever did such a thing. I have known about sqrt-of-3 for a very long time.

The use in the Netherlands of a fifth grounding wire - the green wire in North America - is truly a good idea.

The "Wow" is prompted by the less than belt-and-suspender nature of a house distribution system not using a green (earthing) wire. Steve pointed out that things can go wrong. The system you described being used in the Netherlands, while at 240 VAC, does not rely on all of the bonding staying effective - and that is good. It also has the advantage of being able to provide 3-phase to the few motors expected in a house.

Rob - many thanks for expanding my knowledge. Every engineer from the Netherlands with whom I have worked has impressed me most favorably. Can not say that for engineers from some countries.
73, Mac N8TT

This is not what a 3-phase system is. What you describe is a 2-phase system.

A 3-phase system has 3 live wires, a neutral, and possibly a ground.
The 3 phases are 120 degrees apart, not 180.
Each phase has a voltage (230V here), and there is sqrt-3 times that voltage between the phase wires (400V here). All three phases are used in some electrical motors and in highpower applications like electrical heating, and one of the phases is sufficient for a normal house connection.

> At the service entrance: one scheme connects the neutral to an earthing.

> house
> to an earthing. Wow! The latter scheme is expected in new construction.

Why "Wow!" ?
It is the only safe system.

Here in the Netherlands we have the same situation. Power is distributed over 4 wires (3 live phases plus neutral) and a 5th wire is locally distributed for safety ground. It is connected to the safety ground connections of all reeceptacles and to metal structures in the house, like water and central heating pipes. The neutral is only connected to ground at the substation, and usually has a couple of volts on it when measured at the receptacles.

Like in the UK, we don't have low and medium voltage power distribution
on poles.
All local distribution is underground. Only high voltage is distrubuted
(between cities) on overhead cables.

> It is most interesting to learn that in the Netherlands it is common to
> deliver three phase to a residence. That is a surprise.

It is common, but not everyone has it. However, it is the normal situation
to distribute 3-phase power to every residence and then connect only a
single phase to a meter, picking another phase at each residence. On
request, the connection can be upgraded to 3-phase by exchanging the
meter and adding two more fuses to the already present 3-fuse box.

Dear Rob: That is amazing. Very forward thinking. However, it seems to use a lot of copper, some of which is latent waiting to be used. On the other hand, the cost of running the 3 phase cable underground probably is much more than the cost of the cable.

In the North American scheme, most HV and LV cables are "in the air." This tends to minimize the cost of running the cable and, too often, advantage is taken of air-cooling to use what I believe to be wire that is too small. Some newer, crowded residential areas do bury everything. The wires to my house are buried both as a means to provide safety (antennas can not touch wires) and, because of the reduced cooling, as a means to have the right gauge of wire used. I had to pay extra to have the pole to house connection be as I think it should be.

Each of the disclosed systems has advantages and costs. It is fascinating to see how different systems value the costs.
Thank you for expanding my knowledge. One wonders if you are a radio amateur. 73, Mac N8TT

J. C. Mc Laughlin <jcm@power-net.net> wrote:

> Dear Rob: Of course I know what a three phase system is. In North America, most high voltage (HV) is distributed using three phase. In a residential area, a transformer's primary is connected to one of the phases (with secondary producing what you call a 2-phase, 120VAC - 240VAC system).
> At the next house, or group of houses, down the road another transformer is connected to a different phase - and so on. Because the net power factor of a residential area is inductive, periodically one will see a platform on a pole holding three sets of capacitors each connected to a phase.

Like in the UK, we don't have low and medium voltage power distribution on poles.
All local distribution is underground. Only high voltage is distrubuted (between cities) on overhead cables.

> It is most interesting to learn that in the Netherlands it is common to deliver three phase to a residence. That is a surprise.

It is common, but not everyone has it. However, it is the normal situation to distribute 3-phase power to every residence and then connect only a single phase to a meter, picking another phase at each residence. On request, the connection can be upgraded to 3-phase by exchanging the meter and adding two more fuses to the already present 3-fuse box.

Dear Jeff: OK No tap on the LV side of the (3 phase) transformer. One 230 VAC wire and neutral wire go to house from the transformer.

The non-PME scheme: neutral is "earthed" only at the sub-station AND a local earthing of a separate wire that seems to serve the same function as the North American green wire is provided.

The PME scheme: no earthing takes place; at the house entrance, the neutral is connected to what seems to serve as the green wire (the "local protective earth wire").

Thinking now about installing an antenna and radio: with the PME scheme the radio's case is connected to the "local protective earth wire" and yet the outside of the coax is often going to be connected to an actual earthing. I expect some current.

When I do the same thing here with the green wire connected to the radio's case and the outside of the coax well attached to an extensive earthing system, nothing happens because all of the earthings are connected together. Most important of all, if I grab an exposed bit of the radio while holding the unattached coax connector, no tickle is felt.

It sounds as if a standard part of each radio amateur faced with a PME system is to use an isolation transformer.

Thanks too to you Jeff for significantly expanding my understanding of how different people arrive at a solution to the same issue. By the way, are you a radio amateur?

73, Mac N8TT

No, there is no centre tapping, the supply is direct from one of the 3 phases at 230V+/- wrt neutral.

> At the service entrance: one scheme connects the neutral to an
> earthing. An alternative (called 'protective multiple earthing' (PME))
> does not connect the neutral to an earthing, but connects exposed metal
> in the house to an earthing. Wow! The latter scheme is expected in new
> construction.

No, one scheme leaves the neutral floating (at the consumer's end, grounded at the sub-station) and provides an additional protective earth wire locally via an earth stake (or in the past bonding to water pipes etc).

PME bonds the local protective earth wire to the neutral at the consumer's end, and all exposed metal is bonded to that wire. NO external earths are allowed (without modification of the scheme).

> It is not immediately clear what the advantage of the PME scheme might
> be. Your caution about RF grounds is well placed.

The claim is that because the earth is provided by the supply company is it more reliable than a local earth stake. Personally I am not convinced by the whole scheme.

Have a look at:
<electrical.theiet.org/wiring-matters/16/earthing-questions.cfm?type=pdf>

for more info
Jeff

I would not be surprised if this system would be abandoned.
The operating companies of the electric grid have been changed from
state-owned into private companies, and we are already seeing the
deterioration resulting from such changes. This combined with the
high copper prices of today could surely mean that new connections
will be made single-phase.

We consider such systems ugly and unsafe. Even HV cables are sometimes
run underground, although this costs a lot of money. It is mainly done
in cases where residential areas have expanded to places where HV overhead
cables already existed.

> Each of the disclosed systems has advantages and costs. It is fascinating
> to see how different systems value the costs.

I think an important difference is "who is the decisionmaker".
Commercial companies tend to look only at costs, state-owned companies
tend to look more at environmental issues.

> amateur. 73, Mac N8TT

Yes I am, but I am not very active and only on VHF/UHF.

Dear Rob: It certainly seems that you have well described the considerations.

Our houses tend to be farther apart, and low cost wins over potential ugliness. Lack of safety is not believed. An earthed wire is run above the HV 3-phase and does a good job of providing a low impedance path for lighting. One side of the HV to LV transformer is earthed as well as the center tap of the secondary (Neutral). The neutral is again earthed at the service entrance as is one end of the green wire running unimpeded to every human touchable conductor. Additionally, the house wiring is run at half the voltage common in Europe. Plugs and receptacles are standardized, which makes almost certain the appliances are properly connected. (In the UK it appears that appliances are sold without a plug and rely on the consumer to do the right thing.)

You have so well said, in effect, that every group of people have a different set of values that they place on things. If the money is available, the system in the Netherlands is invisible, flexible (with 3-phase ready when needed), and with the use of the equivalence of a green wire only diminished in safety from the NA system by using twice the voltage.

Indeed, if I were planning the electrical distribution system for a research laboratory, I would seriously consider using the Netherland scheme with half the voltage.

Afraid VHF will not reach to the Netherlands. Warm regards and thanks,
Mac   N8TT

I would not be surprised if this system would be abandoned.
The operating companies of the electric grid have been changed from
state-owned into private companies, and we are already seeing the
deterioration resulting from such changes. This combined with the
high copper prices of today could surely mean that new connections
will be made single-phase.

> In the North American scheme, most HV and LV cables are "in the air."

We consider such systems ugly and unsafe. Even HV cables are sometimes
run underground, although this costs a lot of money. It is mainly done
in cases where residential areas have expanded to places where HV overhead
cables already existed.

> Each of the disclosed systems has advantages and costs. It is fascinating
> to see how different systems value the costs.

I think an important difference is "who is the decisionmaker".
Commercial companies tend to look only at costs, state-owned companies
tend to look more at environmental issues.

> Thank you for expanding my knowledge. One wonders if you are a radio
> amateur. 73, Mac N8TT

Yes I am, but I am not very active and only on VHF/UHF.

Sure, and I think the plugs/sockets in use in the UK and those used in the remainder of Europe are also much safer than the ones used in the USA.
The USA types have the tendency to expose live pins when the plug is partly removed, something that does not happen here.

"half the voltage" also doesn't matter much when the voltage is unsafe to touch anyway. And it means "double the current" as well, which increases the problem of overheating of bad contacts.

I'm sure the USA would go for a system like the European when it had the chance to change. This is something that has been decided in the past and is not so easy to change later, which is why it remains as it is.

If you actually knew anything about electricity, which you don't, you
would know that under normal circumstances there is no current in the
earth ground connection.

The earth ground connection is for safety and current will only flow if
something is wrong.

This is also why radios powered by AC are connected to earth ground; it is
for safety against electrocution if something in the equipment breaks and
has NOTHING to do with the operation of the radio as a radio.

In Poland in the all power AC lines is an exccess of electrons.
The ground is necessary.

The details are such that more electrons is gain in one half of the cycle
than jump off in the second.

What the things are in your country?

I have a friend with a problem. He has a rather heavy duty ball mount on his van, with a 6ft long fiberglass HF antenna of some sorts attached. No spring between the ball mount and the antenna. Unfortunately, the antenna unscrewed itself and he was driving around with the antenna flopping about for many weeks. The result was that the antenna beat up the 3/8-24 threads in the ball mount end to where the threads are now stripped out. Fortunately, the antenna end threads seem intact.

The original plan was to drill out the threads in the ball mount and install a Helicoil to repair the threads. The problem is that the Helicoil 3/8-24 kit costs as much as a new ball mount.
<http://www.ebay.com/itm/400302414654>   ($32 for the kit)
Either way, he doesn't want to spend the money.

So, instead of rethreading the ball mount, I propose to insert a 1" long 3/8-24 piece of threaded rod into the ball mount and secure it with JB Weld, which allegedly contains metal particles. My tests show that it's still an insulator when hardened, mostly because the metal particles do not overlap. However, the close fit of the threads may be sufficient to get some manner of connection.
<http://www.youtube.com/watch?v=9gKYfgIGMlE>

Silver loaded conductive epoxy might provide a better connection, but the stuff is fairly weak at 900psi compared to JB Weld at 3900psi. It may not be sufficiently strong to survive the flopping antenna.
<http://www.mgchemicals.com/products/8331.html>

Will JB Weld work?
Or will it get hot due to IR^2 losses due to antenna currents?
Will adding steel filings help?
Is there a better way to do this?
Is there a better adhesive?

Allen Funt was intelligent. And funny. SB is neither.

All he can do is google, copy URLs or parts of articles, then paste.
Zero brain activity involved.

Everything build-able is directional, to a greater or lesser degree,
when the pattern is viewed in 3 dimensions.

Hi, Jeff.
The antenna part threads are ok because it is stainless steel, while the ball part is some type of pot metal, primarily zinc. The Heicoil will eventually rust and cause no end of problems.

the correct repair method is to drill and ream the ball part to a known larger size, perhaps even 1/2 inch. Then press in a stainless steel rod and cut it flush with the top of the original hole.

Then drill and tap the pressed in piece for 3/8X24 threads.

In California where it never rains, an aluminum rod may be used, but won't last forever. You may also want to seal the top of the plug/ball with a little RTV to ensure car wash water can't get in.

I suppose a clever person could drill and tap the rod 3/8x24 before pressing it into the ball. Might be easier to do the drilling and tapping using a lathe.

Paul, KD7HB

Well, the height over ground will effect the pattern, but it does not
become omnidirectional.

As you get lower in height, the null of a free space or high antenna
starts going away.

At wavelengths over ground:

2, ends are 30 db down from broadside

1, about 22 db down

.5, about 10 db down

.25, about 3 db down

So it approaches omnidirectonal as you get lower but is only omnidirectional
at zero height.

EZNEC is your friend.

You want this moron to think in three dimensions when he can't tell the difference between 1 and 2 (monopole/dipole)?

In article <1arjv7lqob37ke2fle0i6ohnh457qsogbd@4ax.com>,
Jeff Liebermann <jeffl@cruzio.com> wrote:

>Will JB Weld work?
>Or will it get hot due to IR^2 losses due to antenna currents?

I suspect it will behave like a high-dissipation-factor capacitor in series with the antenna current. There will probably be both resistive loss, and some reactance in the connection... how much of each I can't predict, and the amounts may not remain stable with time.

>Will adding steel filings help?

>Is there a better way to do this?
>Is there a better adhesive?

Can you separate the "mechanical connection" and "electrical connection" aspects?

You could use JB Weld, as you intend, to rebuild the mechanical connection at the base of the whip. Either before or after doing this, drill a small hole in the ball, and use this to connect a flexible jumper wire (either solder the wire into the hole, or tap the hole for a small screw) and connect the other end of the wire to the base of the whip... in effect a very short, flexible "flying lead".

Another thought... if you under-size the hole you drill for the threaded rod, you might be able to achieve an interference fit between the threaded rod and the hole, so that have to press-fit the rod into place (e.g. with a vise) and you have actual metal-to-metal contact between the rod and the metal of the ball. You could use some JB Weld to reinforce the connection, but the Weld would tend to be squeezed out of the actual contact reason when you force the rod into place. If you've got a clean metal-to-metal interference fit between rod and ball, the presence of the JB Weld in the other areas will be irrelevant... it will be "shorted out" by the direct metal contact areas. The JB Weld would act both as a structural reinforcement, and to exclude oxygen from the interference-fit contact surfaces and help keep the resistance low over time.

Hertz was using the spheres or plates. They both were the ends of the open
circuit. The end can be without any "hat".

 Do you have exactly the same voltages in the both ends of your "dipole"?

Monopole have always the two elements: the antenna and the counterpoise.
>
> That is the meaning of the prefixes "mono", which means one, and "di",
> which means two.

So monopole  has the one pole. The end of the counterpoise is not the pole.
In your "dipole" the counterpoise is in the form of one elevated radial.

The  "dipole" where one element is connected to "live" wire and the second
to a "ground" is the monopole.
Yours "dipoles" are not symmetrical (electrically0. They are symmetrical
mechanically.

It is your misunderstanding that:

1. amateurs always connect coax directly to a dipole.  they don't.
   those that are in the know will use a balun.

2. the braid of the coax is "ground".  this is not true.  there will
   be voltage at the braid of the coax at the antenna end when a balun
   is not used.

"I have a dipole with 134 feet of 20 gauge insulated copper wire. What would happen if I wanted to replace one leg (67 feet) with 18 gauge copper clad insulated steel wire but chose to keep the other leg with the 20 gauge wire?"

It would be interesting to know what is the reason: corrosion or an something else.

Also if the leg is the antenna or the counterpoise.

I agree with Bilou: "Joel now has a quarter wave over a ground plane.A well known case.
Impedance is halved .
Resonance is only dependant of the remaining wire and unchanged."

What materials are recommended for radials (counterpoise) and for the radiated arm?

In the past, many amateurs did connect coax directly to a dipole. The reason is that - on most occasions - it worked perfectly well, and they 'got away with it'. It was only when problems occurred (interference to TV, radio, Hi-Fi etc) that much thought was given to the need for a balun.

In modern times, there is a lot more opportunity for amateurs to interfere with - and suffer interference from - all kinds of domestic equipment, and the use of a balun (or twin feeder) has more-or-less become an absolute necessity.

>2. the braid of the coax is "ground". this is not true. there will
>   be voltage at the braid of the coax at the antenna end when a balun
>   is not used.

Szczepan is obviously making the fundamental mistake of thinking that, because the coax screen is grounded at the transmitter end (or at least connected to the chassis of the transmitter), it is therefore at zero RF potential - and that it is still at RF potential at the far (antenna) end, where it is connected directly to the 'other' leg of the dipole. This is wrong.

He is then assuming that if the coax screen is at zero RF potential where it is connected to the other leg of the dipole, then the other leg of the dipole is also at zero RF potential (and doesn't radiate). This is wrong.

He is therefore concluding that as both the coax screen and the other leg of the dipole are at zero RF potential, the only part of the antenna system that is 'RF live' is the leg of the dipole which is connected to the inner conductor of the coax - which is what happens with a monopole. As a result, he is then claiming that a dipole is really only a monopole. This is wrong.

However, I'm still convinced that Szczepan knows far more about radio than he appears to, and is cunningly trying to get us to explain phenomena which maybe we really don't know as much about as we like to think we do!

The transmission line used to connect to the antenna has absolutely
nothing to do with what kind of antenna a particular antenna is.

Transmission lines and antennas are two separate things.

You are a babbling, ineducable idiot.

> Yours "dipoles" are not symmetrical (electrically0. They are symmetrical
> mechanically.

ALL of my dipoles ARE electrically symmetrical as they are fed either with
balanced transmission line or there is a balancing device between the
transmission line and the antenna.

How many antennas have you built in your lifetime?

Once again, phased radars don't use spheres for antennas and Hertz was
long dead when radar was invented.

Of course I do.

How many antennas have you built?

I know that in the coax screen something is induced. But I am sure that
such "dipole" is not electrically symmetrical.

I am sure that the other leg radiate almost nothing.
In Hertz time all scientists investigate which part of the Hertz apparature
radiate.
> He is therefore concluding that as both the coax screen and the other leg

I am only claiming that it works like the monopole.
In your literature is wrote that "monopole with the counterpoise works like
the dipole". But in your literature the dipole means the mechanical
symmetry.

> However, I'm still convinced that Szczepan knows far more about radio than

Exactly.

But if I am right than the "counterpoise" leg of your dipole should be made
of the proper material and have the proper dimenssion not necesary the same
as the "live" leg.
So I start the new thread "Joels question".

The history of radio-amateur is so long that that issue is probably solved

long ago.

Hello Szczepan. Which amateur radio book said that "dipole" means the
"mechanical symmetry", please?
Regards, Ian.

Connect it with coaxial transmission line, idiot.

>>The reason is that - on most occasions - it worked perfectly well, and they
>>'got away with it'. It was only when problems occurred (interference to TV,
>>radio, Hi-Fi etc) that much thought was given to the need for a balun.
>
> And what if somebody have the monopole with the radials?

Since a monopole with radials is an unbalanced load, there is no current
flow on the outside of the coax, idiot.

>> In modern times, there is a lot more opportunity for amateurs to interfere
>> with - and suffer interference from - all kinds of domestic equipment, and
>> the use of a balun (or twin feeder) has more-or-less become an absolute
>> necessity.
>
> The twin feeder ensure the electrical symmetry.

Yes, it does, as does a balancing device and coax transmission line, idiot.

>>>2. the braid of the coax is "ground". this is not true. there will

>
> I know that in the coax screen something is induced. But I am sure that
> such "dipole" is not electrically symmetrical.

That is because you are an ignorant, ineducable, idiot.

You have been told and you actually referenced a web link that shows how
a balancing device is used between a coax transmission line and and balanced
load, but no matter how many times you are told this and how many links
you post that say this, you are totally incapable of understanding any of
it.

>> He is then assuming that if the coax screen is at zero RF potential where
>> it is connected to the other leg of the dipole, then the other leg of the

>
> I am sure that the other leg radiate almost nothing.

That is because you are an ignorant, ineducable, idiot.

> In Hertz time all scientists investigate which part of the Hertz apparature
> radiate.

In Hertz's time the instruments to measure the voltages, currents, and
fields didn't exist.

>> He is therefore concluding that as both the coax screen and the other leg
>> of the dipole are at zero RF potential, the only part of the antenna
>> system that is 'RF live' is the leg of the dipole which is connected to

>> the inner conductor of the coax - which is what happens with a monopole.
>> As a result, he is then claiming that a dipole is really only a monopole.
>> This is wrong.
>
> I am only claiming that it works like the monopole.

That is because you are an ignorant, ineducable, idiot.

> In your literature is wrote that "monopole with the counterpoise works like
> the dipole". But in your literature the dipole means the mechanical
> symmetry.

That is because you are an ignorant, ineducable, idiot.

What you quoted means the far field for a monopole with a counterpoise is
the same as the far field as a vertical dipole.

It does NOT mean the antenna voltages and currents are the same.

>> However, I'm still convinced that Szczepan knows far more about radio than
>> he appears to, and is cunningly trying to get us to explain phenomena
>> which maybe we really don't know as much about as we like to think we do!
>
> Exactly.

You know NOTHING about radio.

You are a babbling, ignorant, ineducable, idiot.

How many transmitters have you run in your lifetime?

How many antennas have you built in your lifetime?

> But if I am right than the "counterpoise" leg of your dipole should be made
> of the proper material and have the proper dimenssion not necesary the same
> as the "live" leg.

You are NOT right.

Dipoles do not have a counterpoise.

You are a babbling, ignorant, ineducable, idiot.

> So I start the new thread "Joels question".
>
> The history of radio-amateur is so long that that issue is probably solved
> long ago.

The "issue" was solved long ago, you are totally wrong about EVERYTHING
you say, and amateur radio has NOTHING to do with the issue other than
you are posting in an amatuer radio group.

Post your nonsense in sci.physics.electromag and you will get exactly the
same response, you babbling idiot.

How many antennas have you built in your lifetime?

I think Szczepan is using the type of logic that concludes, as cats have
four legs and dogs have four legs, then cats are dogs.

Not knowing anything about what the two of you are talking about, just gotta say one thing... Engineers are known for knowing all the knowladge to pass a test, yet not a single bit of real-world usage. Eg. An engineer can design the complete working schematic for a ham radio, but when it comes to putting it together, he may have the hardest time stripping the wires, soldering the connections, etc. But gosh darn it, once it's completely together, and fired up.... The engineer would then listen carefully and hear a distorted sounding voice and insist that the antenna wasn't working to full potential, while the newly licensed short order cook steps up and turns the clarifier slightly and hears a much clearer voice, then tells the Engineer "You go tune the antenna, while I make a connection to this operator!"

Cute story, but it doesn't match what I've seen in industry. Maybe I worked
for better companies than you :)

Fortunately I learned to solder long before I learned engineering.

"Oscillators don't, amplifiers do."

Most engineers are not technicians though a lot were a one time.

Do doctors usually know the best way to mop the floors in the hospital?

"A dipole antenna is a radio antenna that can be made of a simple wire, with a center-fed driven element. It consists of two metal conductors of rod or wire, oriented parallel and collinear with each other (in line with each other), with a small space between them. "

As you see Your dipoles are mechanically symmetrical.
It can works as the monopole or as the dipole. It depends on electrical connections.

If the monopole has only one radial it is exactly as the your dipole.
Right?

But your "dipole" is exactly like the monopole with the one radial.

In Faraday's time the all was measured. The only difference was in the
electrons name. Faraday's name for the electric particle was "nuclei".

Antenna with the four legs is used for the circullar polarization.

Tell us if the your dipole ( the two legs and coax directly to a dipole)
radiate the polarised waves?

It seems you are using theories that apply to DC electronics (like
```

"it is connected to ground so it has zero voltage") to HF.

This is wrong.   Even when you feed a dipole with a coax, there still
is almost symmetrical voltage on the two connections, even though the
braid is connected to one pole and the other end of the braid may be
grounded.
The result is that there is voltage on the outside of the braid, the
coax becomes part of the antenna and the radiation pattern changes.

But it will not be a monopole. If anything, it is a tripole.

Of course, nobody in their right mind would to that. Use a balun.

No.  A monopole needs many radials, not one.  if it has only one radial
the voltage at the end of the radial is the same as on the monopole,
and the whole thing becomes a dipole.

I think we need to avoid Szczepan's black and white (and usually
completely wrong) way of thinking about things. We need to consider
"When does a monopole become a dipole" (or vice versa).

With no actually ground connection, you could have a nominal monopole
with (say) only one radial (eg an extremely badly radiating quarterwave
radial running horizontally at ground level, and a quarterwave radiating
element going vertically (or semi-vertically) upwards. If you then raise
the radial so that it starts to radiate better - or if you raise the
whole antenna system away from the ground - it will then increasingly
become a dipole.

Of course, while a monopole with a single ground-level radial (and no
ground connection) would work quite well, it would not be as good as if
you added more (preferably spread out) radials. And the more radials you
add - especially if any overall radiation from the radials is negligible
- makes the antenna system more definitely a monopole than a dipole.

Good morning Szczepan.
There's a few problems in your quote:
1. it is unattributed
2. it doesn't mention ham radio
3. you, not the quote, have assumed a mechanical symmetry
4. the quote describes (with an obvious and important omission) the
mechanical construction  of a dipole. It doesn't describe the electrical
design of a dipole.
5. there's an implicit contradiction within the quote.

Kindest regards, Ian.

Real dipole has symmetric voltages not in phase (180).

I have found that in Polish description the dipole used by radio-amateurs
consists of the radiator and the counterpoise.
It is explained that it is geometrically symmetric.

Does anybody use the real dipole?

"balun definition
electronics
A transformer connected between a balanced source or load and an unbalanced
source or load. A balanced line has two conductors, with equal currents in
opposite directions. The unbalanced line has just one conductor; the current
in it returns via a common ground or earth path. "

The braid of the coax and the radial are connected. They work as the ground
```

(or counterpoise).

Is the voltage the same as in the live conductor (at the feed points)?

> Antenna with the four legs is used for the circular polarization.

Sometimes.

> Tell us if the your dipole (the two legs and coax directly to a dipole)
> radiate the polarised waves?

The type of transmission line used to feed an antenna has absolutely nothing to do with what a particular antenna is or how the antenna radiates.

You keep using the phrase "your dipole", which is utter nonsense.

A dipole is a dipole is a dipole.

A dipole will radiate circular polarization if it is not absolutely staight.

Wrong.

You keep using the phrase "your dipole" which is utter nonsense.

A dipole is a dipole is a dipole.

An antenna with two elements at right angles to each other is called a
V dipole and presents a balance load at it's terminals.

>>> And what if somebody have the monopole with the radials?
>>
>> Since a monopole with radials is an unbalanced load, there is no current

No, it is not; see above idiot.

A monopole with radials presents an unbalanced load at it's terminals
while two elements at right angles to eash other present a balanced load
at it's terminals.

Also, the patterns of the two antennas are totally different.

>>> The twin feeder ensure the electrical symmetry.
>>
>> Yes, it does, as does a balancing device and coax transmission line,
>> idiot.
>
> Are you sure?

Positively as was taught in the electromagnetics classes taken to get a
degree in electrical and electronic engineering and verified by about 50
years of building antennas.

What degrees do you have and how many antennas have you built?

Total and utter babbling nonsense as the equipment to make such measurements
was invented long after Faraday died.

You are an ignorant, babbling, ineducable idiot.

True

> The braid of the coax and the radial are connected. They work as the ground
> (or counterpoise).

No. There is no radial. There are two poles in a dipole and neither
of them is connected to the braid. It may be that one of them is
connected to the coax center conductor but this depends on the construction
of the balun (and the transformation ratio).

> Is the voltage the same as in the live conductor (at the feed points)?

Normally not, in a 1:1 balun.

Nope. These daze, engineers do all their design work on a computah.
The design process is called direct to manufacturer. There is no hand
built prototype stage. They don't need to strip wires or solder
anything. Worst case is they might use a hot air SMT rework station
to replace a part, or fix a layout error. If it doesn't work right,
the engineer goes back to the computah simulations, fixes it, and has
the prototype shop robots build another revision. These are todays
engineers, not the cave man variety (like me) that had to build their
own prototypes, strip their own wires, and steal parts from production
to build prototypes. Those days are long gone, except maybe in garage
operations. Open a cell phone and tell my you can build it by hand
with your soldering iron and wire stripper.

>But
>gosh darn it, once it's completely together, and fired up.... The

Baloney. It's the marketing and sales guys that evaluate how
something sounds. Engineers use test equipment that measure how it
sounds, how well it works, and whether it complies with a multitude of
specifications. The numbers are far more sensitive to anomalies than
a talk test. On a rare day, there may actually be a talk test, but
that's unusual. Incidentally, you can see distortion on a scope long
before you can hear it.

What's a clarifier?  Is that one of those things found on a CB radio?

If that is true, then that description is essentially wrong. Maybe it is
a translation problem?

>It is explained that it is geometrically symmetric.

That is essentially true. However, what happens if the symmetry is not quite absolutely perfect? When does it cease to be a dipole?
>
>Does anybody use the real dipole?

I doubt if many who use an antenna which has a radiator and a counterpoise would think of it as a dipole. However, as I have suggested, it is all a matter of degree, ie how much radiation comes from the 'counterpoise'. A counterpoise is really intended to provide an artificial ground - especially in conditions where it difficult to get a good ground connection, or where the conductivity of the ground is poor. Usually, the intention is that a counterpoise does not (or does not need to) radiate. Multiple counterpoises are effectively radials, which are definitely not intended to radiate.

If a dipole is fed directly using coax - but without a balun, the 'counterpoise' side of the dipole (the side connected to the coax screen) radiates considerably. Also, a lot of the current in the 'counterpoise' side flows on the outside of the coax. This means that the coax itself radiates (even if it perfectly grounded at the transmitter end). Depending on the particular situation, this may - or may not - cause problems. To prevent the possibility of problems caused by radiation from the coax, a balun should be used.

It is always a dipole no matter where it is.

The type of antenna is determined by it's geometry, not it's location
or it's transmission line.

It is the radiation pattern of the antenna that is effected by it's
location.

The your Polish radio amateurs would be idiots or your understanding of
Polish is just as bad as your understanding of English.

> It is explained that it is geometrically symmetric.

Likely about the ONLY thing you have said that is both true and relevant.

> Does anybody use the real dipole?

The dipole is likely the most common type of antenna in use at frequencies
above about 2 MHz, so yes, thousands and thousand of people and organizatons

use dipoles.

How many antennas have you built and used?

The fields, currents, and voltages on an antenna can not be measuered by
paper and pensil (sic) and the methods necessary to calculated their

values didn't exist until Faraday was long dead and only became practical
after computers were invented.

Not quite correct, but close enough.

OK.

> Is the voltage the same as in the live conductor (at the feed points)?

Gibberish.

What is a "live conductor"?

Correct.
```

```
> A balanced line has two conductors, with equal currents in
>opposite directions.

Correct.

>The unbalanced line has just one conductor; the current
>in it returns via a common ground or earth path. "
>
Incorrect.

Unbalanced line (ie coax) has two conductors - the inner conductor and
the screen. At RF, the go and return currents flow on the outside if the
inner conductor, and on the inside of the screen. The outside of the
screen should be 'RF dead'. However, when the unbalanced coax is
connected directly to a balanced antenna, a lot of the screen current
flows on the outside of the screen, so the coax becomes part of the
antenna, and radiates.

>The braid of the coax and the radial are connected. They work as the ground
>(or counterpoise).
>
A counterpoise (or a system of radials) can provide an artificial
ground. However, an artificial ground is only required for 'one-sided'
monopole types of antennas. A counterpoise is not normally intended to
be a radiator.

The 'counterpoise' side of a dipole - if it is connected directly to the
coax screen - is not RF-dead. It is usually intended to radiate
more-or-less as well as the 'RF-live' side. Unfortunately, some of the
current in the 'counterpoise' side of the dipole flows down the outside
of the coax screen, and this causes the coax to radiate.

>Is the voltage the same as in the live conductor (at the feed points)?

Which voltages do you mean?
--
Ian

"The current which flows on the outer surface of the shield is called common mode current. In other words, it is the unbalanced current not returned within the coaxial cable.
This leads to a very important question. If the current isn't returned in the cable, where does it go? The answer is, it radiates! In fact, the amount of radiation from the coax cable is directly proportional to the common-mode current on that cable." From: http://www.k0bg.com/common.html

"In fact, the amount of radiation from the coax cable is directly proportional to the common-mode current on that cable."

The currents consists of electrons.

Does it means that the electrons jump off from the end of the radiator?

In Faraday time no such meters but Faraday had know that electrons (nuclei) jump off from the end of the open circuit.

Also L. Lorenz known that the light is the oscillatory flow of electrons.

Most perfectly incorrect. The power level has no relation whatsoever.

The number of radials is related to the efficiency.

I assume that Joel dipole is feed with a coax. Because: "Many people have had success in feeding a dipole directly with a coaxial cable feed rather than a ladder-line. "

Is it the Joel case?

Do you agree that such "dipole" is the monopole?

The balun only improve the monopole . The only one leg is red (radiate):

Good morning Szczepan . Dipoles and monopoles are two different aerials. If you do not understand the difference then you need to try harder to understand what you are being told rather than disregarding it.

Regards, Ian.

Good morning again Szczepan. The caption to that diagram is "Coax and
antenna both acting as radiators instead of only the antenna."
Note carefully - coax AND antenna BOTH acting as radiators. Directly below
that illustration is another one showing the usual operation of a dipole.

Regards, Ian.

The color someone used in an illustrative diagram has no significance
in the operation of the antenna.

Both the halves of the dipole are involved in the radiation.

Once again you totally fail to understand your own link.

BOTH elements radiate equally as shown by theory and by measurement.

You are a babbling idiot.

Which means nothing by taking the image out of context.

If you were to read http://en.wikipedia.org/wiki/Dipole_antenna and actually
understand what it says, you would then understand why one side is shown as
red and one side is shown as blue.

You would also learn that BOTH sides are radiating equally.

> http://en.wikipedia.org/wiki/File:Dipolewidebandbalun.png

Again you show you know nothing about antennas, the real world or the
links you post.

> I am here to learn.
> S*

An outright lie.

If you were here to learn, you would not be arguing with people who have
spent decades building and using antennas in the real world, people ranging
in education from knowledgable hobbyiests to degreed engineers and scientists.

What is a "Joel dipole"?

No, you are an idiot.

The antenna type is NOT determined by the feedline.

Not "if", moron, always.

READ your own link.

If a dipole is fed with coax AND if there is NO balun device, then common mode current flows on the outside of the coax and the coax ALSO radiates.

If a dipole is fed with coax AND if there IS a balun device, then there is no feedline radiation.

In either case, the dipole radiates from both halves.

That is what your link says happens but you are too stupid to read it and can only look at the pictures and misinterpret what they mean.

That may be true, however you appear to be too stupid to understand any of
them and just misinterpret the pictures.

Your latest babbling nonsense about the page at:
http://www.deltadx.net/ABCDx/Sections/Antennas.htm

proves you just look at the pictures and either don't read or don't understand
the text.

> Are you one of them?
> S*

Am I one of what?

If you mean what are MY qualifications to call you a babbling idiot, I have
been building and using antennas for about 50 years and have a degree in
Electrical and Electronic Engineering.

How long have you been building and using antennas and what degrees do
you have?

You truly understand nothing about how feedlines and antennas work.  It
is worthless trying to explain them to you because you also refuse to learn.

Summary: Recruitment announcement for ham-radio-related FAQ articles
Keywords: FAQ, Intro, amateur, ham, radio, recruit, recruitment
```

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/recruitment
Revision: 1.2 2009/11/25 14:41:01
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Try to grasp that:

The Marconi antenna is vertical. It consists of an antena and the
counterpoise. The counterpoise can be in form of the vertical wire. So such
monopole is vertical.

The "dipole" antenna with the coax and without the balun is exactly like te
above set.
The only difference is that the second set is horizontal.
Too difficult?

"Try to grasp that:

The Marconi antenna is vertical. It consists of an antenna and the counterpoise. The counterpoise can be in form of the vertical wire. So such monopole is vertical.

The "dipole" antenna with the coax and without the balun is exactly like the above set.
The only difference is that the second set is horizontal.
Too difficult?
S*

When you have a vertical 1/4 wavelength antenna with a vertical 1/4
wavelength "counterpoise" below it, you don't have a monopole, you
have a dipole.

> The "dipole" antenna with the coax and without the balun is exactly like the

It can be horizontal or vertical or anywhere in between.

Instead writting the "babbling idiot" write a long article on antennas
without ground.

You wrote: "Only end fed monopoles need radials". Do you mean that "Only end
fed monopoles need ground"?

Jimp wrote: "Only end fed monopoles need radials".
Marconi wrote that all antennas needs ground.

It is obvious that "the antenna with the two legs where the one leg is
connected to the shield of a coax" is the Marconi antenna.
It is not the dipole antenna.

The rest of your antennas (small power) can have the ground from AC supply
or chassis.

The real dipole need the ladder line (the two wires).
The coax shield is connected to the ground.
You should write "dipole". In NASA their dipole and your"dipole" are the
quite different things.

Jimp has read modern literature and is correct while Marconi was wrong.

No, it is not "obvious", it is nonsense to call a dipole a Marconi antenna.

A Marconi antenna by definition is an end fed monopole one quarter wavelength high.

> It is not the dipole antenna.

A dipole most certainly IS a dipole.

> The rest of your antennas (small power) can have the ground from AC supply
> or chassis.

Babbling nonsense.

You are an ignorant, ineducable idiot.

Why as there already exists thousands and thousands of such literature
references?

Howver you are too much of an ignorant, ineducable, babbling idiot to be
able to read any of them and understand them.

You were totally unable to understand something as simple as:

http://en.wikipedia.org/wiki/Dipole_antenna

and started babbling about the colors on the graphics showing you haven't
a clue what the article was actually saying.

> You wrote: "Only end fed monopoles need radials". Do you mean that "Only end
> fed monopoles need ground"?

No, I meant what I said.

You, however, are too much of an ignorant, ineducable, babbling idiot to be able to understand it.

To be precise, only end fed monopoles need a counterpoise.

The counterpoise can consist of either radials, a large conductive area
fabricated for the purpose, or the Earth itself IF the surface conductivity
is high enough.

The words "ground", "radial", and "counterpoise" in relation to antennas
are three diffent things with three different meanings but you are too
much of an ignorant, ineducable, babbling idiot to be to understand that.

A quarter wave, end fed vertical monopole with a set of radials does NOT
need a connection to ground.

The radials serve as the counterpoise.

As you are an ignorant, ineducable, babbling idiot you will not understand
any of this and will reply with babbling nonsense.

No, it can not as by definition a Marconi antenna is a quarter wave, end fed
vertical fed against ground.

>
> The "dipole" antenna with the coax and without the balun is exactly like te
> above set.

No, it is not as the generally used meaning of the word "dipole" without
any qualifiers is a half wave, center fed antenna of any orientation but
MOST are oriented horizontally.

> The only difference is that the second set is horizontal.

The difference is one is a quarter wave long and end fed and the other is
a half wave long and center fed.

> Too difficult?

Yes, that is too difficult for an ignorant, ineducable, idiot like you to
understand.

The difference is one is a quarter wave length long and end fed and the other is a half wave length long and center fed.

You are to much of an ignorant, ineducable, idiot to be able to understand the difference.

Ignorant babble of an ineducable idiot.

It is all explained in http://en.wikipedia.org/wiki/Dipole_antenna but
you are too stupid to be able to understand even the pictures.

> You should write "dipole". In NASA their dipole and your"dipole" are the

Word salad babble with no meaning as to be expected from an idiot.

Brilliant! I wish there were some way to preserve these teachings.

Maybe I can take a course and learn how to write. Then, if I had a pencil,
I could copy it all down, if I had some paper. Would that work?

Which is why I made my reference to Allen Funt of "Candid Camera." Funt created preposterous situations and yet people tried their darndest to make something real out of it.

I recall a car with no engine whose driver rolled it downhill into a service station. The driver, Funt's attractive co-host, insisted that she had driven around town all day and wanted the mechanic to check the car because it didn't seem to have much power. In a perfect world, when the mechanic popped the hood, he would have laughed and the "bit" would be spoiled. But no! He tried eight ways to explain to her that she COULDN'T have been driving around town. She just sweetly continued the hoax as several other mechanics came over to check out the action. Classic!

Szczepan is that car with no engine and we are those mechanics. :-)

73,
"Sal"

"The quarter wavemonopole antenna is a single element antenna fed at one end, that behaves as a dipole antenna."

Are you able to understand something as simple as the above?

>>
> To be precise, only end fed monopoles need a counterpoise.
>
> The radials serve as the counterpoise.

The Author in Wiki describes the "dipole" used by radio-amateurs.
Such dipole is simply "The quarter wavemonopole antenna".

Radio-amateurs have "dipole" where one leg is end fed and the other is
connected to the grounded shield of the coax.

You should know that the true dipole is directional.
Are your "dipoles" directional?

"The Hertzian dipole Consider two small spherical conductors connected by a wire. Suppose that electric charge flows periodically back and forth between the spheres."

In " NASA" antennas (eg. phase radars) the each "sphere" is fed from special feeder.
If are the two sphere we have a dipole (Hertzian dipole).

In Marconi antenna is only one "sphere". It is the monopole.

Do you have exactly the same voltages in the both ends of your "dipole"?

The braid = the shield.

The braid and the arm are together the counterpoise.

Have you the same voltages on the braid and on the coax "live" wire?

If not, than you heve the monopole. But it is nothing wrong if in your
community it is call "dipole".

You seem to think that the braid of the coax is a ground and the
voltage there is always zero.

But that is not how things work.

A length of cable, whatever cable it is, is not a short circuit on HF.

Hello Szczepan. The monopole and dipole aerials are definitely two different aerials and it would be wrong to call a monopole a dipole.
It seems that you need some help to understand aerials. The ARRL (http://www.arrl.org/shop/Antennas/) and RSGB (http://www.rsgbshop.org/acatalog/Online_Catalogue_Antennas_37.html) both sell helpful books on aerials.

Kindest regards, Ian.

Monopole antenna: "One side of the antenna feedline is attached to the lower end of the monopole, and the other side is attached to the ground plane, which is often the Earth."

Dipole antenna: "A dipole antenna is a straight electrical conductor measuring 1/2 wavelength from end to end and connected at the center to a radio-frequency (RF) feed line. This antenna, also called a doublet, is one of the simplest types of antenna, and constitutes the main RF radiating and receiving element in various sophisticated types of antennas. The dipole is inherently a balanced antenna, because it is bilaterally symmetrical. Ideally, a dipole antenna is fed with a balanced, parallel-wire RF transmission line"

The Hertz dipole was symmetrical.

The radio-amateurs use the name "dipole" for a monopole.
It is not wrong because they do not use the name monopole.

Hello Szczepan.
Your definition of a dipole is wrong. A dipole is not a "straight electrical
conductor  measuring 1/2 wavelength ".

Yes, and obviously you can not.

What it means is the total FIELD is the same as if the antenna were a dipole.

Nothing more, nothing less.

>> To be precise, only end fed monopoles need a counterpoise.
>>
>> The radials serve as the counterpoise.

A dipole is a dipole is a dipole and it doesn't matter who is using it.

A dipole is NOT "The quarter wavemonopole antenna".

A dipole is a dipole is a dipole.

You STILL can not understand the difference and you never will as you are
an ineducable idiot.

How many antennas have you built in your lifetime?

No shit?

What a stroke of irrelevant brilliance.

> The braid and the arm are together the counterpoise.

No, they are not, you babbling idiot.

> Have you the same voltages on the braid and on the coax "live" wire?

Not without a ballancing device of some sort.

> If not, than you heve the monopole.

What an utter idiot; a monopole has one physical element while a dipole
has two physical elements.

That is the meaning of the prefixes "mono", which means one, and "di",
which means two.

You are a babbling, ineducable, idiot.

How many antennas have you built in your lifetime?

A dipole is fed with a balancing device of some sort between the
transmission line and the antenna of the transmission line is unbalanced.

Than is how EVERYONE does it, not just radio amateurs.

And the shield of the coax is often NOT grounded nor is it required to be
grounded for the antenna to operate properly.

If it is grounded, it is for OTHER reasons than antenna operation such
as electrical safety or the elimination of static build up, which has
absolutely NOTHING to do with the antenna operationg as an antenna.

> You should know that the true dipole is directional.
> Are your "dipoles" directional?

Dipoles are not directional, they are bidirectional in the plane of the
antenna and ALL dipoles are bidirectional in the plane of the antenna.

You are a babbling, ineducable, idiot.

How many antennas have you built in your life time?

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.2 2011/11/02 04:08:53
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/
d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team had decided to consider |
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. After a successful trial |
period (90 days, through early July 2009), we decided to adopt this |
change permanently. |

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

Michelson disproved the H.Lorentz aether;
"It appears, from all that precedes, reasonably certain that if there be any
relative motion between the earth and the luminiferous ether, it must be
small; quite small enough entirely to refute Fresnel's explanation of
aberration. Stokes has given a theory of aberration which assumes the ether
at the earth's surface to be at rest with regard to the latter, and only
requires in addition that the relative velocity have a potential; but
Lorentz shows that these conditions are incompatible. Lorentz then proposes
a modification which combines some ideas of Stokes and Fresnel, and assumes
the existence of a potential, together with Fresnel's coefficient. If now it
were legitimate to conclude from the present work that the ether is at rest
with regard to the earth's surface, according to Lorentz there could not be
a velocity potential, and his own theory also fails."
From:
http://en.wikisource.org/wiki/On_the_Relative_Motion_of_the_Earth_and_the_Luminiferous_Ether

The Michelson proved that Stokes aether rotate with the Sun (1887) but not
rotate with the Earth (1925).

```

Did not you read:
"1925 - the Michelson-Gale-Pearson experiment produces a positive result while attempting to detect the effect of Earth's rotation on the velocity of light. The significance of the experiment remains debated to this day, but this planetary Sagnac effect is measured by ring laser gyros and taken into account by the GPS system."

In 1925 Michelson and Gale did show that there is the aether wind caused by the Earth rotation.

"More generally, the Stokes drift velocity is the difference between
theaverage Lagrangian flow velocity of a fluid parcel, and the
averageEulerian flow velocity of the fluid at a fixed position. This
nonlinearphenomenon is named after George Gabriel Stokes, who derived
expressions for this drift in his 1847 study of water waves."

Hi Irv.

It's fun.It leads to some good discussions between the amateurs on this
group.

It's akin to trying to explain amateur radio to a friend. The difference is
that friends usually listen and understand whereas S* is a "copy-and-paste
practitioner" and can't understand.

73, Ian.

Hello Szczepan .
Thank you for proving my point and showing that you do not understand
things.

Regards, Ian.

Ah! The humour of it all. I'm now trying to work out if Szczepan floats
above the ground or keeps his feet firmly anchored in it.
Let's remember that, to him, a transmitter is a black box and that he really
doesn't understand that of which he writes. I do like the way he's moaned
about aerials having to be grounded and now has decided that the ground can
be different for Tx and Rx.

I have to acknowledge that this group has made me smile more than some of
the comedy shows on BBC Radio 4 Extra.

73 to all, Ian.

In Tx the huge amount of electrons must jump off the antenna. They flow from
the big ground.
In Rx only a few electrons enters in antenna and flow to a little ground.

Hello Szczepan.
Your style of physics is so funny. I'll let you work out the obvious mistake
you made.

ttfn, Ian.

The technical discussion on this group has dropped down in the past
year. It is nice to see a renewal of activity, even if some of the
posts are controversial.

However, I personally lose interest when the discussions are
nonsensical.

Well, considering that Franklin stood out in a storm and attempted
to attract lightning, perhaps they have something in common!

I have a dipole with 134 feet of 20 gauge insulated copper wire. What
would happen if I wanted to replace one leg (67 feet) with 18 gauge
copper clad insulated steel wire but chose to keep the other leg with
the 20 gauge wire?
Tks,
Joel

May stay up longer, not much better performance, and have a slight
different tuning.

You probably would not notice anything on 80 meters. It is possiable that the wire not being insulated and a differant size will cause a slight shift in the resonate frequency, but I doubt that you will notice it.

It is sort of like having a truck load of bricks. If you add one more brick, there is an effect, just too slight to make any differance. Unless someone told you the brick was added, you would not notice it.

Hi
Interesting question.
As the others I don't think anything useful will happen.
In such cases it is convenient to put the things to their limits.
Imagine the diameter of one half is infinite.
You now have a quarter wave over a ground plane.A well known case.
Impedance is halved .
Resonnance is only dependant of the remaining wire and unchanged.
Your result should be somewhere between no change and that.
Another similar question :
Instead of burying lots of radials at the base of a vertical
what about digging (or using) a well and having a quarter wave of wire
dropped into it ?

No effect. The bandwidth of the antenna is determined by the diameter of the conductor. The wider the conductor, the greater the bandwidth. The difference between 18 and 20AWG is negligible and has no effect.

However, 18AWG copper wire is not going to support itself for very long. Copper is soft and breaks easily. The weight of the center balun, plus the coax weight, plus any birds that might roost on the wire, are going to break it. Please consider using heavier gauge wire, copperweld, or at least support the center balun.

As I vaguely recall, NEC (National Electrical Code) Section 810
suggests 14AWG minimum for antennas. I'm too lazy to find the chapter
and verse.

My favorite antenna wire is stainless steel fishing line. Very strong
and doesn't rust. The problem is that as soon as I buy a roll, one of
the local hams invents an antenna project that consumes the entire
roll.

The resonance will change because of the conductivity of the copper wire
vs the copper clad wire.
Although the electrons travels on the outside (skin) of the wire, the
core still plays a part in the equasion because the resistance changes
with the materials.

A real well in soil will be the perfect infinite source of electrons.
The well in a dry rock will be most wrong.

The well in the dry rock is used in ULF. But the electrons are pumped from the wet area.

> A real well in soil will be the perfect infinite source of electrons.

A source of electrons is not required. Transmitters use AC (alternating current) so there is no net flow of electrons.

AC is in a transformer.
In an antenna is the oscillatory flow of electrons. So there is the net flow of electrons.

"It is now known that this device operated by emitting electrons from the single electrode through a combination of field electron emission and thermionic emission.[citation needed] Once liberated, electrons are strongly repelled by the high electric field near the electrode during negative voltage peaks from the oscillating HV output of the Tesla Coil"

Do not you know that?

If that were true, there would be a DC current into a transmitting antenna
fed only by HF (AC) current.
But of course there is no such DC current. If it were there, it would
mean there is nonlinearity in the antenna and there would be severe
intermodulation.

Szczepan  seems to be muddling up valves and aerials. I guess there's no
point in trying to explain the difference between the two to him. Didn't he
make a similar posting a few months ago?

73, Ian.

He has been posting his idiotic crap for years and years both here and in sci.phyics.electromag.

No matter what you tell him his response will be a pile of babbling word salad like the above and a reference to something written over a hundred years ago and perhaps a misinterpreted link to a Wiki article about something else that has some similar words in it.

References to textbooks mean nothing to him as he believes all "teachers" are in a conspiracy to hide the truth.

He thinks Feynman was a "teacher" and not credible.

Yeah, Feynman was a teacher like Mozart was a piano player.

Jim, he is either just having a big laugh by posting all this babbling
and watching our reaction or he has a some form of mental illness. If
the later, he is unaware that he has lost touch with reality.

It is probably a form of therapy to cut and paste all the little pieces
of documents he finds. It may make him feel like he has answers that
none of the rest of us have. The clear evidence that he is confusing
valves and antennas is one of the endless indications of his ignorance
of electrical theory.

He continues his babbling because he gets a huge amount of attention
from it. He has an answer for everything. It is just that the answers
make no sense and are rarely related to the questions.

However, if his babblings make sense to anyone, I have and electron
bridge that is securely attached to the earth. It allows perfect radio
communications anywhere in the universe. I am willing to sell this

bridge at a discount price. Please contact me for pricing and delivery.

Michael

I'm headed that way, myself. This FD was no fun. I used to look forward to it.

I was so busy making sure that I met all my responsibilities, I found only a few hours to actually operate. This came after all the prep work, worry and concern, including getting an all-electronic network log running. (That our network logging worked perfectly in no way makes up for my having had trouble sleeping for weeks leading up to FD.)

Next year, this job goes to somebody else.

"Sal"

FD can be a lot of work. I know dragging a tower and beam
out there got to be a tad strenuous.
And I rarely used the thing myself..
I string up dipoles for me, which is pretty easy to deal with.

But even with an easy setup, I still don't care for contest type operating all that much. Just not really my cup of java..

I skipped this year again. Too busy with work, even if I wanted to go.

If I do any more in the future, like I say, I'll probably just hang out on my own property. That way I can operate at a leisurely pace, and if I get burned out, I can just quit and go do something else for a while.

I doubt it.. He seems to be feeding a single dipole, using
twin runs of coax as an expensive type of ladder line. :/

It would almost surely be a matching issue though. The length
of the dipoles, or being resonant or not, doesn't really matter
too much. Almost any length dipole will radiate almost all
power applied to it. The trick is getting the power to it, and
not turning some into heat in the process.
And reception is reciprocal vs transmit.
I don't buy the claims of better signal to noise ratio.
Adding loss is going to lower the level of all received RF equally.
Actual signals will be reduced at the same ratio as any noise.
So at the end of the day, the s/n ratio should stay the same.

hia A. Colinge)
Solution Manual Electronics and Communications for Scientists and Engineers=
 (Martin Plonus)
Solution Manual Cryptography & Network Security (Behrouz A Forouzan)
Solution Manual Data Communications and Networking (3rd Ed., Behrouz A. For=
ouzan)
Solution Manual Data Communications and Networking (4th Ed., Behrouz A. For=
ouzan)
Solution Manual TCP/IP Protocol Suite (2nd Ed., Behrouz Forouzan)
Solution Manual TCP/IP Protocol Suite (3rd Ed., Behrouz Forouzan)
Solution Manual TCP/IP Protocol Suite (4th Ed., Behrouz Forouzan)
Solution Manual Local Area Networks (Behrouz A Forouzan)
Solution Manual Communication Systems : Analysis and Design (Harold P.E. St=
ern & Samy A. Mahmoud)
Solution Manual Introduction to Communication Systems (3rd Ed., Ferrell G. =
Stremler)
Solution Manual Introduction to Digital Communications (Michael B. Pursley)
Solution Manual Digital Communications : A Discrete-Time Approach (Michael =
Rice)
Solution Manual Introduction to Digital Communication (2nd Ed., Rodger E. Z=
iemer & Roger W. Peterson)
Solution Manual Introduction to Spread Spectrum Communications (Rodger E. Z=
iemer, Roger L. Peterson & David E. Borth)
Solution Manual Micro and Smart Systems (G. K. Ananthasuresh, K. J. Vinoy, =
S. Gopalakrishnan, K. N. Bhat, V. K. Aatre)
Solution Manual Analog Integrated Circuit Design (2nd Ed., Tony Chan Caruso=
ne, David A. Johns, Kenneth W. Martin)
Solution Manual Analog Integrated Circuits for Communication : Principles, =
Simulation and Design (2nd Ed., Donald Pederson & Kartikeya Mayaram)
Solution Manual Satellite Communications (2nd Ed, Pratt, Bostian, Allnutt)

Solution Manual Business Data Communications (Behrouz A Forouzan)
Solution Manual Logic and Computer Design Fundamentals (4th Ed., Mano & Kim=
e)
Solution Manual Linear Robust Control (Michael Green, David J. N. Limebeer)
Solution Manual Adaptive Control (2nd Ed., Karl Johan Astrom, Bjorn Wittenm=
ark)
Solution Manual Advanced Engineering Electromagnetics (2nd Ed., Constantine=
 A. Balanis)=20
Solution Manual Digital Logic Circuit Analysis and Design (Victor P. Nelson=
, H. Troy Nagle, Bill D. Carroll, David Irwin)
Solution Manual Digital Control Engineering : Analysis and Design (M. Sami =
Fadali & Antonio Visioli)
Solution Manual Computer-Controlled Systems : Theory and Design (3rd Ed., K=
arl Johan Astrom & Bjorn Wittenmark)
Solution Manual Electric Circuits (7th Ed., Nilsson & Riedel)
Solution Manual Electric Circuits (8th Ed., Nilsson & Riedel)
Solution Manual Electric Circuits (9th Ed., Nilsson & Riedel)
Solution Manual Introductory Circuits for Electrical and Computer Engineeri=
ng (James Nilsson, Susan Riedel)
Solution Manual Electromagnetic Noise and Quantum Optical Measurements (Her=
mann A. Haus)
Solution Manual Optical Fiber Communications (4th Ed., Gerd Keiser)
Solution Manual Fiber Optic Communications (5th Ed., Joseph C. Palais)
Solution Manual Electromagnetics (Branislav M. Notaros)
Solution Manual Electromagnetics for Engineers (Fawwaz T. Ulaby)
Solution Manual Fundamentals of Applied Electromagnetics (5th Ed., Fawwaz T=
. Ulaby)
Solution Manual Applied Electromagnetics : Early Transmission Lines Approac=
h (Stuart Wentworth)=20
Solution Manual Fundamentals of Electromagnetics with Engineering Applicati=
ons (Stuart Wentworth)
Solution Manual Electromagnetics for Engineers : With Applications to Digit=
al Systems and Electromagnetic Interference (Clayton Paul)
Solution Manual MEMS & Microsystems : Design and Manufacture (1st Ed., Tai-=
Ran Hsu)
Solution Manual MEMS & Microsystems : Design, Manufacture, and Nanoscale En=
gineering (2nd Ed., Tai-Ran Hsu)
Solution Manual Probability and Statistics for Engineering and the Sciences=
 (7th Ed., Jay L. DeVore)=20
Solution Manual Probability and Stochastic Processes : A Friendly Introduct=
ion for Electrical and Computer Engineers (2nd Ed., Roy Yates & David Goodm=
an)
Solution Manual Process Systems Analysis and Control (3rd Ed. Donald Cougha=
nowr, Steven LeBlanc)=20
Solution Manual Fuel Cell Engines (Matthew M. Mench)
Solution Manual Fuel Cell Fundamentals (1st Ed., Ryan O'Hayre, et. al)
Solution Manual Fuel Cell Fundamentals (2nd Ed., Ryan O'Hayre, Whitney Cole=
lla, Suk-Won Cha, Fritz Prinz)
Solution Manual Control Systems Engineering (4th Ed., Norman Nise)
Solution Manual Control Systems Engineering (5th Ed., Norman Nise)
Solution Manual Control Systems Engineering (6th Ed., Norman Nise)
Solution Manual Automatic Control Systems (8th Ed., Benjamin C. Kuo, Farid =
Golnaraghi)

Solution Manual Automatic Control Systems (9th Ed., Farid Golnaraghi, Benja=
min C. Kuo)
Solution Manual Basic Electricity for Industry : Circuits and Machines - Ca=
nadian Edition (Doug Edgar)
Solution Manual Basic Engineering Circuit Analysis (8th Ed., Irwin & Nelms)
Solution Manual Basic Engineering Circuit Analysis (9th Ed., Irwin & Nelms)
Solution Manual Basic Engineering Circuit Analysis (10th Ed., Irwin & Nelms=
)
Solution Manual A Brief Introduction to Circuit Analysis (J. David Irwin)
Solution Manual Semiconductor Devices : Basic Principles (Jasprit Singh)
Solution Manual Semiconductor Device Fundamentals (Robert F. Pierret)
Solution Manual Advanced Semiconductor Fundamentals (2nd Ed., Robert F. Pie=
rret)
Solution Manual Device Electronics for Integrated Circuits (3rd Ed., Richar=
d S. Muller, Theodore I. Kamins)
Solution Manual Fundamentals of Semiconductor Devices (Anderson)
Solution Manual Scientific Computing (2nd Ed., Michael T. Heath)
Solution Manual System Identification : An Introduction (Karel J. Keesman)
Solution Manual Scientific Computing with Case Studies (Dianne P. O'Leary)
Solution Manual Pattern Recognition and Machine Learning (Christopher M. Bi=
shop)
Solution Manual Modern Semiconductor Devices for Integrated Circuits (Chenm=
ing C. Hu)
Solution Manual Analysis and Design of Analog Integrated Circuits (4th Ed.,=
 Paul Gray, et al.)
Solution Manual Analysis and Design of Analog Integrated Circuits (5th Ed.,=
 Paul Gray)

5th Ed., Savitch & Carrano)
Solution Manual Introduction to Computing and Programming with Java : A Mul=
timedia Approach (Guzdial & Ericson)
Solution Manual Java How to Program (7th Ed., Harvey & Paul Deitel)
Solution Manual Java How to Program : Early Objects Version (8th Ed., Paul =
Deitel)
Solution Manual Java How to Program : Late Objects Version (8th Ed., Paul D=
eitel)
Solution Manual Java For Students (5th Ed., Bell & Parr)
Solution Manual Java, Java, Java, Object-Oriented Problem Solving (3rd Ed.,=
 Morelli & Walde)
Solution Manual Java : An Eventful Approach (Bruce, Danyluk & Murtagh)
Solution Manual Introduction to Java Programming with JBuilder (3rd Ed., Y.=
 Daniel Liang)
Solution Manual Starting Out with Visual Basic 2008 (4th Ed., Gaddis & Irvi=
ne)
Solution Manual Starting Out with Visual Basic 2010 (5th Ed., Gaddis & Irvi=
ne)
Solution Manual Starting Out with Python (Tony Gaddis)
Solution Manual Object-Oriented Programming in Python (Goldwasser & Letsche=
r)
Solution Manual Introduction to MathCAD 11 (Ronald W. Larsen)
Solution Manual Introduction to MathCAD 13 (2nd Ed., Ronald W. Larsen)
Solution Manual MatLAB Programming (David Kuncicky)
Solution Manual Introduction to Maple 8 (David Schwartz)
Solution Manual Introduction to FORTRAN 90 (2nd Ed., Larry R. Nyhoff & Sanf=
ord Leestma)
Solution Manual Fortran 95/2003 Scientists and Engineers (3rd Ed., Stephen =
J. Chapman)
Solution Manual Introduction to Java (Stephen J. Chapman)
Solution Manual Java Software Solutions for AP Computer Science A (2nd Ed.,=
 Lewis, Loftus & Cocking)
Solution Manual Business Data Networks and Telecommunications (6th Ed., Ray=
mond R. Panko)
Solution Manual Business Data Networks and Telecommunications (7th Ed., Ray=
mond R. Panko)

Solution Manual Business Data Communications (Allen Dooley)
Solution Manual Object-Oriented Programming in C++ (4th Ed., Robert Lafore)
Solution Manual C++ : Classes and Data Structures (Jeffrey Childs)
Solution Manual Data Structures Outside-In with Java (Sesh Venugopal)
Solution Manual Data Structures and Abstractions with Java (2nd Ed., Frank =
M. Carrano)
Solution Manual Data Structures and Algorithms in Java (Peter Drake)
Solution Manual Practical Introduction to Data Structures and Algorithm Ana=
lysis : C++ Edition (2nd Ed., Clifford A. Shaffer)
Solution Manual Computer Vision : A Modern Approach (David Forsyth & Jean P=
once)
Solution Manual Computer Graphics Using Java 2D and 3D (Hong Zhang & Y. Dan=
iel Liang)
Solution Manual Computer Graphics Using OpenGL (3rd Ed., Francis Hill Jr. &=
 Stephen Kelley)
Solution Manual Computer Graphics with OpenGL (3rd Ed., Donald Hearn & M. P=
auline Baker)
Solution Manual User-Centered Web Site Development : A Human-Computer Inter=
action Approach (McCracken & Wolfe)
Solution Manual Fundamentals of Game Design (Ernest Adams & Andrew Rollings=
)
Solution Manual Introduction to The Game Industry (Moore & Sward)
Solution Manual Fundamentals of Math and Physics for Game Programmers (Wend=
y Stahler)
Solution Manual Usability Engineering : Process, Products & Examples (Laura=
 Leventhal & Julie Barnes)
Solution Manual Web Usability : A User-Centered Design Approach (Jonathan L=
azar)
Solution Manual Structured Computer Organization (5th Ed., Andrew S. Tanenb=
aum)
Solution Manual Assembly Language for Intel-Based Computers (5th Ed., Kip I=
rvine)
Solution Manual Assembly Language for x86 Processors (6th Ed., Kip R. Irvin=
e)
Solution Manual Fundamentals of Multimedia (Ze-Nian Li & Mark Drew)
Solution Manual Digital Media Primer (Yue-Ling Wong)
Solution Manual Essentials for Design Macromedia Director MX 2004 Comprehen=
sive (Tara Gray)
Solution Manual Modern Systems Analysis and Design (4th Ed., Jeffrey Hoffer=
, Joey George, & Joseph Valacich)
Solution Manual Modern Systems Analysis and Design (5th Ed., Jeffrey Hoffer=
, Joey George, & Joseph Valacich)
Solution Manual Modern Systems Analysis and Design (6th Ed., Jeffrey Hoffer=
, Joey George, & Joseph Valacich)
Solution Manual Modern Database Management (8th Ed., Hoffer, Prescott & Top=
i)
Solution Manual Modern Database Management (9th Ed., Hoffer, Prescott & Top=
i)
Solution Manual Modern Database Management (10th Ed., Hoffer, Ramesh & Topi=
)
Solution Manual Database Systems Using Oracle (2nd Ed., Nilesh Shah)
Solution Manual An Advanced Course in Database Systems : Beyond Relational =
Databases (Dietrich & Urban)

Solution Manual Data and Text Mining : A Business Applications Approach (Th=
omas Miller)
Solution Manual Network Management : Concepts and Practice, A Hands-On Appr=
oach (J. Richard Burke)
Solution Manual Computer and Communication Networks (Nader F. Mir)
Solution Manual High Performance TCP/IP Networking (Mahbub Hassan & Raj Jai=
n)
Solution Manual Computer Security : Principles and Practice (William Stalli=
ngs & Lawrie Brown)
Solution Manual Computer Forensics : Principles and Practices (Volonino, An=
zaldua & Godwin)
Solution Manual Disaster Recovery : Principles and Practices (April Wells, =
Charlyne Walker & Timothy Walker)
Solution Manual Firewalls and VPNs : Principles and Practices (Richard Tibb=
s & Edward Oakes)=20
Solution Manual Network Defense and Countermeasures : Principles and Practi=
ces (Chuck Easttom)
Solution Manual Corporate Computer and Network Security (1st Ed., Raymond P=
anko)
Solution Manual Corporate Computer and Network Security (2nd Ed., Raymond P=
anko)
Solution Manual IP Telephony Using CallManager Express Lab Portfolio (Chery=
l Schmidt & Ernie Friend)
Solution Manual High-Speed Networks and Internets : Performance and Quality=
 of Service (2nd Ed., William Stallings)
Solution Manual Object-Oriented Modeling and Design with UML (2nd Ed., Mich=
ael Blaha & James Rumbaugh)
Solution Manual Operating Systems : Internals and Design Principles (5th Ed=
., William Stallings)
Solution Manual Operating Systems : Internals and Design Principles (6th Ed=
., William Stallings)
Solution Manual Distributed Systems : Principles and Paradigms (2nd Ed., Ta=
nenbaum & Van Steen)
Solution Manual Modern Operating Systems (3rd Ed., Andrew Tanenbaum)
Solution Manual Computer Networks (4th Ed., Andrew S. Tanenbaum)
Solution Manual Computer Networks (5th Ed., Andrew S. Tanenbaum, David J. W=
etherall)
Solution Manual Operating Systems Design and Implementation (3rd Ed., Andre=
w Tanenbaum & Albert Woodhull)
Solution Manual UNIX Unbounded : A Beginning Approach (5th Ed., Amir Afzal)
Solution Manual Introduction to Operating Systems and Networks (Ruth Watson=
)
Solution Manual Operating Systems (3rd Ed., Harvey Deitel, Paul Deitel & Da=
vid Choffnes)
Solution Manual Operating Systems Principles (Lubomir Bic & Alan Shaw)
Solution Manual A Practical Guide to Linux : Commands, Editors, and Shell P=
rogramming (Mark Sobell)
Solution Manual A Practical Guide to Red Hat Linux : Fedora Core and Red Ha=
t Enterprise Linux (2nd Ed., Mark Sobell)
Solution Manual A Practical Guide to Red Hat Linux : Fedora Core and Red Ha=
t Enterprise Linux (3rd Ed., Mark Sobell)
Solution Manual A Practical Guide to Fedora and Red Hat Enterprise Linux: C=
ollege Edition (Mark Sobell)

Solution Manual A Practical Guide to Ubuntu Linux (Mark Sobell)
Solution Manual Automata, Computability and Complexity : Theory and Applica=
tions (Elaine Rich)
Solution Manual Modern Digital Electronics (R.P. Jain)
Solution Manual Linear Systems and Signals (B.P. Lathi)
Solution Manual Modern Digital and Analog Communications Systems (3rd Ed., =
B. P. Lathi)
Solution Manual Introduction to Digital Systems (Milo D. Ercegovac, Lang & =
Moreno)
Solution Manual Embedded Systems : Architechture, Programming and Design (R=
aj Kamal)
Solution Manual Modern Power System Analysis (D. P. Kothari & I. J. Nagrath=
)
Solution Manual Basic Electrical Engineering (2nd Ed., D.P. Kothari, I.J. N=
agrath)
Solution Manual Electric Machines (3rd Ed., D.P. Kothari, I.J. Nagrath)
Solution Manual Circuits and Networks (A. Sudhakar & S. Palli Shyammohan)
Solution Manual Electrical and Electronic Technology (9th Ed., Edward Hughe=
s, John Hiley, Keith Brown & Ian McKenzie-Smith)
Solution Manual Electrical and Electronic Technology (10th Ed., Edward Hugh=
es, John Hiley, Keith Brown & Ian McKenzie-Smith)
Solution Manual Electric Motors and Drives : Fundamentals, Types and Applic=
ations (3rd Ed., Austin Hughes)=20
Solution Manual Modern Processor Design : Fundamentals of Superscalar Proce=
ssors (John P. Shen)
Solution Manual Computer Networks : Principles, Technologies and Protocols =
for Network Design (N. Olifer & V. Olifer)=20
Solution Manual Computer Networking : Internet Protocols in Action (Jeanna =
Matthews)
Solution Manual Computer Organization (5th Ed., Hamacher et al.)
Solution Manual CMOS Digital Integrated Circuits : Analysis and Design (3rd=
 Ed., Sung-Mo Kang & Yusuf Leblebici)
Solution Manual Introduction to Logic Design (1st Ed., Alan B Marcovitz)=20
Solution Manual Introduction to Logic Design (2nd Ed., Alan B Marcovitz)=20
Solution Manual Introduction to Logic Design (3rd Ed., Alan B Marcovitz)=20
Solution Manual Introduction to Logic and Computer Design (Alan B Marcovitz=
)
Solution Manual Digital Principles and Design (Donald D. Givone)
Solution Manual Programmable Logic Controllers (3rd Ed., Frank Petruzella)
Solution Manual Programmable Logic Controllers (4th Ed., Frank Petruzella)

List of Solutions Manuals and Test Banks=20
----------------------------------------

contact to :         mattosbw1@gmail.com                     mattosbw1(at)g=
mail.com

  =20

NOTE :  "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20
```

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Electrical, Electronics & Computer Engineering :

Solution Manual Antenna Theory and Design (2nd Ed., Stutzman & Thiele)
Solution Manual Antennas for All Applications (3rd Ed., John Kraus & Ronald=
 Marhefka)
Solution Manual Principles of Neurocomputing for Science and Engineering (F=
redric M. Ham & Ivica Kostanic)
Solution Manual Introduction to Algorithms (2nd Ed., Cormen, et al.)
Solution Manual Algorithms (Dasgupta, et al.)
Solution Manual Introduction to Random Signals and Applied Kalman Filtering=
 with Matlab Exercises (4th Ed., Robert Grover Brown, Patrick Y. C. Hwang)
Solution Manual Applied Operating Systems Concepts (Silberschatz, Galvin & =
Gagne)
Solution Manual Operating System Concepts (6th Ed., Silberschatz, Galvin & =
Gagne)
Solution Manual Operating System Concepts (7th Ed., Silberschatz, Galvin & =
Gagne)
Solution Manual Operating System Concepts (8th Ed., Silberschatz, Galvin & =
Gagne)
Solution Manual Operating Systems Concepts with Java (6th Ed., Silberschatz=
, Galvin & Gagne)
Solution Manual Operating System Concepts with Java (7th Ed., Silberschatz,=
 Galvin & Gagne)
Solution Manual Operating System Concepts with Java (8th Ed., Silberschatz,=
 Galvin & Gagne)
Solution Manual C++ Program Design (3rd Ed., Cohoon & Davidson)
Solution Manual Java : Program Design 5.0 (Cohoon & Davidson)
Solution Manual Programming in C++ : Lessons and Applications (Timothy B. D=
'Orazio)
Solution Manual Applied C : An Introduction and More (Alice Fischer)
Solution Manual Programming Languages : Principles and Paradigms (1st Ed., =
Allen Tucker & Robert Noonan)
Solution Manual Programming Languages : Principles and Paradigms (2nd Ed., =
Allen Tucker & Robert Noonan)
Solution Manual Introduction to Parallel Computing (2nd Ed., Grama, Karypis=

```
, Kumar & Gupta)
Solution Manual Parallel Programming in C with MPI and Open MP (Michael J Q=
uinn)
Solution Manual Data Communications and Network Security (Houston H. Carr &=
 Charles Snyder)
Solution Manual Data Communications and Networks (David Miller)
Solution Manual Management Information Systems (3rd Ed., Post & Anderson)
Solution Manual Management Information Systems (4th Ed., Post & Anderson)
Solution Manual Database Management Systems (3rd Ed. Post)
Solution Manual Management Information Systems (9th Ed., James A. O'Brien, =
George Marakas)
Solution Manual Introduction to Systems Analysis and Design (Whitten & Bent=
ley)
Solution Manual Systems Analysis & Design : An Active Approach (2nd Ed., Ma=
rakas)
Solution Manual An Introduction to Object-Oriented Programming with Java (4=
th Ed., C. Thomas Wu - Otani)
Solution Manual An Introduction to Object-Oriented Programming with Java (5=
th Ed., C. Thomas Wu - Otani)
Solution Manual A Comprehensive Introduction to Object-Oriented Programming=
 With Java (C. Thomas Wu)
Solution Manual Data Structures and the Java Collections Framework (1st Ed.=
, William Collins)
Solution Manual Data Structures and the Java Collections Framework (2nd Ed.=
, William Collins)
Solution Manual Data Structures and the Standard Template Library (William =
Collins)
Solution Manual Database System Concepts (4th Ed., Silberschatz)
Solution Manual Database System Concepts (5th Ed., Silberschatz)
Solution Manual Database System Concepts (6th Ed., Silberschatz, Korth & Su=
darshan)
Solution Manual Database Management Systems (3rd Ed., Ramakrishnan & Gehrke=
)
Solution Manual Fundamentals of Network Security (Eric Maiwald)
Solution Manual Computing Concepts (1st Ed., Haag, et al.)
Solution Manual Computing Concepts (2nd Ed., Haag et al.)
Solution Manual Microsoft Office 2003 (Haag et al.)
Solution Manual Advanced Programming Using Visual Basic .NET (2nd Ed., Juli=
a Case Bradley & Anita Millspaugh)
Solution Manual Advanced Programming Using Visual Basic 2005 (3rd Ed., Juli=
a Case Bradley & Anita Millspaugh)
Solution Manual Programming with Java (Julia Case Bradley & Anita Millspaug=
h)
Solution Manual Programming in C#.Net (1st Ed., Julia Case Bradley & Anita =
Millspaugh)
Solution Manual Programming in Visual C# 2005 (2nd Ed., Julia Case Bradley =
& Anita Millspaugh)
Solution Manual Learning Programming Using Visual Basic.Net (Bill Burrows &=
 Joe Lanford)
Solution Manual Programming in Visual Basic.NET : Visual Basic.NET 2005 (6t=
h Ed., Julia Case Bradley & Anita Millspaugh)
Solution Manual Programming in Visual Basic .Net : 2003 Update Edition (5th=
 Ed., Julia Case Bradley & Anita Millspaugh)
```

```
Solution Manual Survey of Operating Systems (2nd Ed., Jane Holcombe & Charl=
es Holcombe)
Solution Manual Principles of Voice and Data Communications (Regis J. Bates=
 & Marcus Bates)
Solution Manual Mike Meyers' Network+ Guide To Managing and Troubleshooting=
 Networks (Michael Meyers)
Solution Manual Introduction to Windows Server 2003 (Eric Ecklund)
Solution Manual Programming The Web : An Introduction (Barrie Sosinsky & Va=
lda Hilley)
Solution Manual Programming The Web Using XML (Ellen Pearlman & Eileen Mull=
in)
Solution Manual Internet Marketing : Building Advantage in a Networked Econ=
omy (2nd Ed., Rafi Mohammed et al.)
Solution Manual Internet Technologies at Work (Fred T. Hofstetter)
Solution Manual Internet Literacy (4th Ed., Fred T. Hofstetter)
Solution Manual Software Engineering : A Practitioner's Approach (5th Ed., =
Roger Pressman)
Solution Manual Software Engineering : A Practitioner's Approach (6th Ed., =
Roger Pressman)=20
Solution Manual Software Engineering : A Practitioner's Approach (7th Ed., =
Roger Pressman)
Solution Manual Web Engineering : A Practioner's Approach (1st Ed., Roger S=
. Pressman & David Lowe)
Solution Manual Object-Oriented Software Engineering (Stephen Schach)
Solution Manual Object-Oriented and Classical Software Engineering (5th Ed.=
, Steve Schach)
Solution Manual Object-Oriented and Classical Software Engineering (6th Ed.=
, Steve Schach)
Solution Manual Object-Oriented and Classical Software Engineering (7th Ed.=
, Steve Schach)
Solution Manual Object-Oriented and Classical Software Engineering (8th Ed.=
, Steve Schach)
Solution Manual Introduction to Object-Oriented Analysis and Design (Steve =
Schach)
Solution Manual Communication Networks (2nd Ed., Alberto Leon-Garcia & Indr=
a Widjaja) =20
Solution Manual Fundamentals of Digital Logic with Verilog Design (1st Ed.,=
 Stephen Brown & Zvonko Vranesic)
Solution Manual Fundamentals of Digital Logic with Verilog Design (2nd Ed.,=
 Stephen Brown & Zvonko Vranesic)
Solution Manual Continuous and Discrete Control Systems (John Dorsey)
Solution Manual Engineering Circuit Analysis (6th Ed., William Hayt, Jack K=
emmerly & Steven Durbin)=20
Solution Manual Engineering Circuit Analysis (7th Ed., William Hayt, Jack K=
emmerly & Steven Durbin)=20
Solution Manual Engineering Electromagnetics (7th Ed., William Hayt & John =
Buck)
Solution Manual Engineering Electromagnetics (8th Ed., William Hayt & John =
Buck)
Solution Manual Principles of Electronic Materials and Devices (2nd Ed., Sa=
fa O. Kasap)
Solution Manual Principles of Electronic Materials and Devices (3rd Ed., Sa=
fa O. Kasap)
```

```
Solution Manual Programming in Haskell (Graham Hutton)
Solution Manual Probability and Random Processes With Applications to Signa=
l Processing and Communications (Miller & Childers)
Solution Manual Logic in Computer Science : Modelling and Reasoning about S=
ystems (2nd Ed., Michael Huth & Mark Ryan)
Solution Manual Introduction to Distributed Algorithms (2nd., Gerard Tel)
Solution Manual Information Theory, Inference and Learning Algorithms (Davi=
d J. C. MacKay)
Solution Manual Digital Systems Engineering (William Dally & John Poulton)
Solution Manual Concepts in Programming Languages (by John Mitchell)
Solution Manual Simulation Modeling and Analysis (3rd Ed., Averill Law & Da=
vid Kealton)
Solution Manual Simulation Modeling and Analysis with Expertfit Software (4=
th Ed., Averill Law)
Solution Manual System Modeling and Analysis : Foundations of System Perfor=
mance Evaluation (Hisashi Kobayashi & Brian Mark)
Solution Manual Wireless Communications (Andrea Goldsmith)
Solution Manual Testing of Digital Systems (N. K. Jha & S. Gupta)
Solution Manual Space-Time Coding (Hamid Jafarkhani)
Solution Manual Space-Time Block Coding for Wireless Communications (Erik L=
arsson & Petre Stoica)
Solution Manual Smart Electronic Materials : Fundamentals and Applications =
(Jasprit Singh)
Solution Manual Radio-Frequency Electronics : Circuits and Applications (Jo=
n Hagen)
Solution Manual Photonic Devices (Jia-ming Liu)
Solution Manual Networking Wireless Sensors (Bhaskar Krishnamachari)
Solution Manual Mobile Wireless Communications (Mischa Schwartz)
Solution Manual Introduction to Color Imaging Science (Hsien-Che Lee)
Solution Manual Fundamentals of Wireless Communication (David Tse & Pramod =
Viswanath)
Solution Manual Fundamentals of Modern VLSI Devices (Yuan Taur & Tak H. Nin=
g)
Solution Manual Electronic and Optoelectronic Properties of Semiconductor S=
tructures (Jasprit Singh)
Solution Manual An Introduction to Statistical Signal Processing (Robert M.=
 Gray)
Solution Manual An Introduction to Radio Frequency Engineering (Christopher=
 Coleman)
Solution Manual Algebraic Codes for Data Transmission (Richard Blahut)
Solution Manual Fundamentals of Solid State Electronics (C.T. Sah)
Solution Manual Fundamentals of Solid State Engineering (2nd Ed., Manijeh R=
azeghi)
Solution Manual Robot Modeling and Control (Spong, Hutchinson & Vidyasagar)
Solution Manual Theory of Applied Robotics : Kinematics, Dynamics and Contr=
ol (Reza N. Jazar)
Solution Manual Control of Robot Manipulators in Joint Space (R. Kelly, V. =
Santib=E1=F1ez, A. Lor=EDa)
Solution Manual Modelling and Control of Robot Manipulators (2nd Ed., Loren=
zo Sciavicco, Bruno Siciliano)=20
Solution Manual Robotics : Modelling, Planning and Control (Bruno Siciliano=
, Lorenzo Sciavicco, Luigi Villani & Giuseppe Oriolo)
Solution Manual Fundamentals of Semiconductor Fabrication (Gary S. May, Sim=
```

on M. Sze)
Solution Manual Semiconductor Devices : Physics and Technology (2nd Ed, Sim=
on M. Sze)
Solution Manual Semiconductor Devices : Physics and Technology (3rd Ed, Sim=
on M. Sze & Ming-Kwei Lee)
Solution Manual Electric Machinery (6th Ed., Fitzgerald)
Solution Manual Electric Machinery Fundamentals (4th Ed., Chapman)
Solution Manual Electric Machinery Fundamentals (5th Ed., Chapman)
Solution Manual Electric Machinery and Power System Fundamentals (Chapman)
Solution Manual Local Area Networks (2nd Ed., Keiser)
Solution Manual Signals and Systems : Analysis of Signals Through Linear Sy=
stems (1st Ed., M.J. Roberts)
Solution Manual Fundamentals of Signals and Systems (M.J. Roberts)
Solution Manual Introduction to Signals and Systems (Lindner)
Solution Manual Semiconductor Physics and Devices : Basic Principles (3rd E=
d., Donald Neamen)
Solution Manual Semiconductor Physics and Devices : Basic Principles (4th E=
d., Donald Neamen)
Solution Manual An Introduction to Semiconductor Devices (Donald Neamen)
Solution Manual Microelectronic Circuit Analysis and Design (3rd Ed., Donal=
d Neamen)
Solution Manual Microelectronic Circuit Analysis and Design (4th Ed., Donal=
d Neamen)
Solution Manual Electronic Circuit Analysis and Design (2nd Ed., Donald Nea=
men)
Solution Manual Design for Electrical and Computer Engineers (1st Ed., Ralp=
h Ford & Chris Coulston)=20
Solution Manual Fundamentals of Modeling and Analyzing Engineering Systems =
(Cha, Rosenberg, Dym)
Solution Manual Linear Systems (Panos J. Antsaklis & Anthony N. Michel)
Solution Manual A Linear Systems Primer (Panos J. Antsaklis & Anthony N. Mi=
chel)
Solution Manual Principles of Linear Systems (Philip E. Sarachik)
Solution Manual Linear Systems Control : Deterministic and Stochastic Metho=
ds (Elbert Hendricks, Ole Jannerup & Paul Haase S=F8rensen)
Solution Manual Power Systems Harmonics : Fundamentals, Analysis and Filter=
 Design (George J. Wakileh)
Solution Manual Principles of Adaptive Filters and Self-learning Systems (A=
nthony Zaknich)=20
Solution Manual Algebraic Methods for Nonlinear Control Systems (2nd Ed., C=
onte, Moog & Perdon)=20
Solution Manual Discrete-Time Control Systems (2nd Ed., K. Ogata)
Solution Manual Modern Control Engineering - Problems B (3rd Ed., K. Ogata)=
=20
Solution Manual Modern Control Engineering (4th Ed., K. Ogata)
Solution Manual Modern Control Engineering (5th Ed., K. Ogata)
Solution Manual Modern Control Engineering - International Version (5th Ed.=
, K. Ogata)
Solution Manual LabVIEW 8 Student Edition (Bishop)
Solution Manual LabVIEW 2009 Student Edition (Bishop)
Solution Manual Learning with LabVIEW 2009 (Bishop)
Solution Manual Introduction to Feedback Control (Li Qiu & Kemin Zhou)
Solution Manual Modeling and Simulation of Dynamic Systems (Robert Woods, J=

r. & Kent Lawrence)
Solution Manual Feedback Control Systems (4th Ed., Charles L. Phillips, Roy=
ce D. Harbor)
Solution Manual Feedback Control Systems (5th Ed., Charles L. Phillips, Joh=
n Parr)
Solution Manual Feedback Control of Dynamic Systems (4th Ed., Gene Franklin=
, J.D. Powell, Abbas Emami-Naeini)
Solution Manual Feedback Control of Dynamic Systems (5th Ed., Gene Franklin=
, J.D. Powell, Abbas Emami-Naeini)
Solution Manual Feedback Control of Dynamic Systems (6th Ed., Gene Franklin=
, J.D. Powell, Abbas Emami-Naeini)
Solution Manual Feedback Control of Dynamic Systems - International Version=
 (6th Ed., Gene Franklin, J.D. Powell, Abbas Emami-Naeini)
Solution Manual Predictive Control with Constraints (Jan Maciejowski)
Solution Manual Computer Numerical Control : Operation and Programming (3rd=
 Ed., Stenerson & Curran)
Solution Manual Engineering Problem Solving with C (3rd Ed., Etter)
Solution Manual Engineering Problem Solving with C++ (2nd Ed., Etter)
Solution Manual Process Control Instrumentation Technology (8th Ed., Johnso=
n)
Solution Manual Electrical Power and Controls (2nd Ed., Skvarenina & DeWitt=
)
Solution Manual Electronics and Computer Math (8th Ed., Deem & Zannini)
Solution Manual Circuits, Signals, and Systems for Bioengineers : A MATLAB-=
Based Introduction (John Semmlow)
Solution Manual Signals and Systems for Bioengineers : A MATLAB-Based Intro=
duction (2nd Ed., John Semmlow)
Solution Manual VLSI Test Principles and Architectures : Design for Testabi=
lity (Laung-Terng Wang, Cheng-Wen Wu & Xiaoqing Wen)=20
Solution Manual Mechatronics : Principles and Applications (Godfrey Onwubol=
u)
Solution Manual Mechatronics (Sabri Cetinkunt)
Solution Manual Introduction to Mechatronic Design (J. Edward Carryer, Matt=
hew Ohline & Thomas Kenny)
Solution Manual Introduction to Mechatronics and Measurement Systems (2nd E=
d., David Alciatore & Michael Histand)
Solution Manual Introduction to Mechatronics and Measurement Systems (3rd E=
d., David Alciatore & Michael Histand)
Solution Manual Introduction to Mechatronics and Measurement Systems (4th E=
d., David Alciatore & Michael Histand)
Solution Manual Machine Vision : Theory, Algorithms, Practicalities (3rd Ed=
., E. R. Davies)
Solution Manual Essential Java for Scientists and Engineers (Brian D. Hahn =
& Katherine M. Malan)
Solution Manual Guide to Microsoft Excel 2002 for Scientists and Engineers =
(3rd Ed., Bernard V. Liengme)
Solution Manual 10-Key Touch Key : Developing Speed and Accuracy (Burton)=
=20
Solution Manual Introduction to C++ Programming, Brief Version (Y. Daniel L=
iang)
Solution Manual Introduction to C++ Programming, Comprehensive (Y. Daniel L=
iang)
Solution Manual C++ for Business Programmers (2nd Ed., John C. Molluzzo)

Solution Manual Introduction to Java Programming - Brief Version (7th Ed., =
Liang)
Solution Manual Introduction to Java Programming - Brief Version (8th Ed., =
Liang)
Solution Manual Introduction to Java Programming - Brief Version - Internat=
ional Edition (8th Ed., Liang)

List of Solutions Manuals and Test Banks=20
----

contact to :   mattosbw1@gmail.com   mattosbw1(at)g=
mail.com
  =20

NOTE : "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Math, Statistics & Probability :

Solution manual Advanced Engineering Mathematics (8th Ed., Erwin Kreyszig)
Solution manual Advanced Engineering Mathematics (9th Ed., Erwin Kreyszig)
Solution manual Advanced Engineering Mathematics (10th Ed., Erwin Kreyszig)
Solution manual Advanced Engineering Mathematics (2nd Ed, Michael Greenberg=
)
Solution manual Advanced Engineering Mathematics (6th Ed., Peter O'Neil)=20
Solution manual Statistics and Finance : An Introduction (David Ruppert)
Solution manual Differential Equations for Engineers and Scientists (Yunus =
A. Cengel, William J. Palm III)=20
Solution manual Mathematics for Carpentry and the Construction Trades (3rd =
Ed., Alfred P. Webster & Kathryn E. Bright)
Solution manual Calculus : Early Transcendental Functions (3rd Ed., Robert =
T. Smith & Roland B. Minton)
Solution manual Calculus : Early Transcendental Functions (4th Ed., Robert =
T. Smith & Roland B. Minton)
Solution manual Elements of Engineering Probability and Statistics (Rodger =
E. Ziemer)
Solution manual Statistics and Probability for Engineers and Scientists, Pr=
eliminary Edition (Bhisham C. Gupta, Irwin Guttman)
Solution manual Statistics and Data Analysis : From Elementary to Intermedi=
ate (Ajit Tamhane, Dorothy Dunlop)
Solution manual Statistics and Data Analysis for Financial Engineering (Dav=
id Ruppert)
Solution manual Mathematical Physics with Partial Differential Equations (J=
ames Kirkwood)
Solution manual Essential Statistics, Regression, and Econometrics (Gary Sm=
ith)
Solution manual Mathematical Methods for Physicists : A Comprehensive Guide=
 (7th Ed., George Arfken, Hans Weber & Frank Harris)
Solution manual Statistics for Physical Sciences - An Introduction (Brian M=
artin)
Solution Manual Mathematical Statistics for Economics and Business (Ron C. =
Mittelhammer)
Solution manual Advanced Modern Engineering Mathematics (3rd Ed., Glyn Jame=
s)
Solution manual Modern Engineering Mathematics (4th Ed., Glyn James)
Solution manual Differential Equations and Dynamical Systems (3rd Ed., Lawr=
ence Perko)=20
Solution manual Introductory Differential Equations with Boundary Value Pro=
blems (3rd Ed., Martha Abell & James Braselton)
Solution manual A Modern Introduction to Differential Equations (2nd Ed., H=
enry J. Ricardo)=20
Solution manual Elementary Differential Equations (7th Ed., Boyce)
Solution manual Elementary Differential Equations (8th Ed., Boyce & Diprima=
)
Solution manual Elementary Differential Equations (9th Ed., Boyce & Diprima=
)
Solution manual Elementary Differential Equations and Boundary Value Proble=
ms (7th Ed., Boyce & Diprima)

Solution manual Elementary Differential Equations and Boundary Value Proble=
ms (8th Ed., Boyce & Diprima)
Solution manual Elementary Differential Equations and Boundary Value Proble=
ms (9th Ed., Boyce & Diprima)
Solution manual Differential Equations : An Introduction to Modern Methods =
and Applications (James Brannan & William Boyce)
Solution manual Differential Equations with Boundary Value Problems : An In=
troduction to Modern Methods and Applications (James Brannan & William Boyc=
e)
Solution manual An Introduction to Mathematical Cryptography (J. Hoffstein,=
 J. Pipher, J.H. Silverman)
Solution manual Practical Business Statistics (Andrew Siegel)
Solution manual Advanced Calculus : A Transition to Analysis (Thomas Dence =
& Joseph Dence)
Solution manual Calculus : Early Transcendentals Combined (8th Ed., Anton, =
Bivens & Davis)
Solution manual Calculus : Early Transcendentals Combined (9th Ed., Anton, =
Bivens & Davis)
Solution manual Calculus : Multivariable (8th Ed., Anton, Bivens & Davis)
Solution manual Calculus : Multivariable (9th Ed., Anton, Bivens & Davis)
Solution manual Calculus : Early Transcendentals Single Variable (8th Ed., =
Anton, Bivens & Davis)
Solution manual Calculus : Early Transcendentals Single Variable (9th Ed., =
Anton, Bivens & Davis)
Solution manual Calculus : Late Transcendentals Combined (8th Ed., Anton, B=
ivens & Davis)
Solution manual Calculus : Late Transcendentals Combined (9th Ed., Anton, B=
ivens & Davis)
Solution manual Calculus : Late Transcendentals Single Variable (8th Ed., A=
nton, Bivens & Davis)
Solution manual Calculus : Late Transcendentals Single Variable (9th Ed., A=
nton, Bivens & Davis)
Solution manual Introduction to the Finite Element Method : Theory, Program=
ming and Applications (Erik G. Thompson)
Solution manual A Physicist's Guide to Mathematica (2nd Ed., Patrick Tam)
Solution manual Mathematics for Engineers : A Modern Interactive Approach (=
3rd., Anthony Croft & Robert Davison)
Solution manual Measurement and Data Analysis for Engineering and Science (=
Patrick F Dunn)
Solution manual Elementary Linear Algebra (4th Ed., Stephen Andrilli & Davi=
d Hecker)
Solution manual Elementary Linear Algebra Edition Abridged (9th Ed., Anton =
& Rorres)
Solution manual Elementary Linear Algebra (9th Ed., Anton)
Solution manual Elementary Linear Algebra with Applications (9th Ed., Anton=
 & Rorres)
Solution manual Boundary Value Problems and Partial Differential Equations =
(6th Ed., David Powers)
Solution manual Introductory Statistics : Using Technology (5th Ed., Prem S=
. Mann)
Solution manual Introductory Statistics (6th Ed., Prem S. Mann)
Solution manual Introductory Statistics (7th Ed., Prem S. Mann)
Solution manual Basic Real Analysis (Houshang H. Sohrab)

Solution manual Essentials of Integration Theory for Analysis (Daniel W. St=
roock)
Solution manual Statistical Methods (3rd Ed., Rudolf Freund, Donna Mohr, Wi=
lliam Wilson)
Solution manual Doing Bayesian Data Analysis : A Tutorial Introduction with=
 R (John Kruschke)
Solution manual Modern Algebra : An Introduction (6th Ed., John Durbin)
Solution manual The Art and Craft of Problem Solving (2nd Ed., Paul Zeitz)
Solution manual Numerical Linear Algebra (Gr=E9goire Allaire, Sidi Mahmoud =
Kaber, K. Trabelsi)
Solution manual Introductory Statistics for the Behavioral Sciences (6th Ed=
., Welkowitz, Cohen & Ewen)
Solution manual Statistics : Principles and Methods (5th Ed., Richard Johns=
on)
Solution manual Statistics : Principles and Methods (6th Ed., Richard Johns=
on)
Solution manual Statistical Bioinformatics : with R (Sunil K. Mathur)
Solution manual A Modern Introduction to Differential Equations (2nd Ed., H=
enry Ricardo)
Solution manual Parameter Estimation and Inverse Problems (Richard Aster, B=
rian Borchers & Clifford Thurber)
Solution manual Parameter Estimation and Inverse Problems (2nd Ed., Richard=
 Aster, Brian Borchers & Clifford Thurber)
Solution manual Codes : An Introduction to Information Communication and Cr=
yptography (Norman L. Biggs)
Solution manual Geometry and Its Applications (2nd Ed., Walter A. Meyer)
Solution manual Elementary Differential Geometry (2nd Ed., A.N. Pressley)
Solution manual Fractal Geometry : Mathematical Foundations and Application=
s (2nd Ed., Kenneth Falconer)
Solution manual Analytical and Computational Methods of Advanced Engineerin=
g Mathematics (Grant B. Gustafson & Calvin H. Wilcox)
Solution manual How to Read and Do Proofs : An Introduction to Mathematical=
 Thought Processes (4th Ed., Daniel Solow)
Solution manual How to Read and Do Proofs : An Introduction to Mathematical=
 Thought Processes (5th Ed., Daniel Solow)
Solution manual A Probability Path (Sidney Resnick)
Solution manual Probability, Reliability, and Statistical Methods in Engine=
ering Design (Achintya Haldar, Sankaran Mahadevan)
Solution manual An Engineers Guide to MATLAB (3rd Ed., Magrab, Azarm, Balac=
handran, Duncan, Herold & Walsh)
Solution manual Intuitive Probability and Random Processes using MATLAB (St=
even Kay)
Solution manual Modeling Random Processes for Engineers and Managers (James=
 Solberg)
Solution manual Probability and Random Processes with Applications to Signa=
l Processing (3rd Ed., Henry Stark & John W. Woods)
Solution manual Probability, Statistics, and Random Processes for Engineers=
 (4th Ed., Henry Stark & John W. Woods)
Solution manual Probability, Statistics, and Random Processes For Electrica=
l Engineering (3rd Ed., Alberto Leon-Garcia)
Solution manual Probability Concepts in Engineering : Emphasis on Applicati=
ons to Civil and Environmental Engineering (2nd Ed., Ang & Tang)
Solution manual Applied Statistics for Engineers and Physical Scientists (3=

rd Ed., Johannes Ledolter & Robert Hogg)
Solution manual Applied Statistics and Probability for Engineers (3rd Ed., =
Montgomery & Runger)
Solution manual Applied Statistics and Probability for Engineers (4th Ed., =
Montgomery & Runger)
Solution manual Applied Statistics and Probability for Engineers (5th Ed., =
Montgomery & Runger)
Solution manual Engineering Statistics (3rd Ed., Montgomery, Runger & Hubel=
e)
Solution manual Engineering Statistics (4th Ed., Montgomery, Runger & Hubel=
e)
Solution manual Engineering Statistics (5th Ed., Montgomery, Runger & Hubel=
e)
Solution manual Introduction to Statistical Quality Control (5th Ed., Montg=
omery)
Solution manual Introduction to Statistical Quality Control (6th Ed., Montg=
omery)
Solution manual Calculus : One Variables (10th Ed., Salas, Hille, Etgen)
Solution manual Calculus : One and Several Variables (8th Ed., Salas, Hille=
, Etgen)
Solution manual Calculus : One and Several Variables (10th Ed., Salas, Hill=
e, Etgen)
Solution manual Squaring the Circle : Geometry in Art and Architecture (Pau=
l Calter)
Solution manual Technical Mathematics (5th Ed., Paul Calter & Michael Calte=
r)
Solution manual Technical Mathematics with Calculus (5th Ed., Paul Calter &=
 Michael Calter)
Solution manual Technical Mathematics with Calculus, Canadian Edition (Paul=
 Calter & Michael Calter)
Solution manual Technical Mathematics with Calculus (6th Ed., Paul Calter &=
 Michael Calter)
Solution manual Techniques of Problem Solving (Luis Fern=E1ndez, Haedeh Goo=
ransarab)
Solution manual Probability and Statistics in Engineering (4th Ed., Hines, =
Montgomery, Goldsman & Borror)
Solution manual A First Course in Design and Analysis of Experiments (Gary =
W. Oehlert)
Solution manual Design and Analysis of Experiments (6th Ed., Douglas Montgo=
mery)
Solution manual Design and Analysis of Experiments (7th Ed., Douglas Montgo=
mery)
Solution Manual Experimental Methods for Engineers (8th Ed., Jack P. Holman=
)
Solution manual Introduction to Engineering Experimentation (2nd Ed., Wheel=
er & Ganji)
Solution manual Introduction to Engineering Experimentation (3rd Ed., Wheel=
er & Ganji)
Solution manual Introduction to the Design & Analysis of Experiments (Canav=
os & Koutrouvelis)
Solution manual Modern Methods For Quality Control and Improvement (2nd Ed.=
, Wadsworth, Stephens, Godfrey)
Solution manual Essential Statistics for Economics, Business and Management=

 (Teresa Bradley)
Solution manual Statistics and Econometrics : Methods and Applications (Ash=
enfelter, Levine & Zimmerman)
Solution manual Applied Combinatorics (5th Ed., Alan Tucker)
Solution manual Applied Combinatorics (6th Ed., Alan Tucker)
Solution manual Vector Calculus (Miroslav Lovric)
Solution manual Applied Multivariate Techniques (Subhash Sharma)
Solution manual Mathematical Modeling (3rd Ed., Mark Meerschaert)
Solution manual Discrete Mathematics : Mathematical Reasoning and Proof wit=
h Puzzles, Patterns, and Games (Douglas Ensley, J. Winston Crawley)
Solution manual Probability, Random Variables and Random Signal Principles =
(4th Ed., Peyton Z., Jr. Peebles)
Solution manual Introduction to C++, Excel MATLAB & Basic Engineering Numer=
ical Methods V1.1 (Harvey Stenger & Charles Smith)
Solution manual Numerical Methods for Engineers and Scientists : An Introdu=
ction with Applications Using MATLAB (1st Ed., Amos Gilat & Vish Subramania=
m)
Solution manual Numerical Methods for Engineers and Scientists : An Introdu=
ction with Applications Using MATLAB (2nd Ed., Amos Gilat & Vish Subramania=
m)
Solution manual MATLAB : An Introduction with Applications (2nd Ed., Amos G=
ilat)
Solution manual MATLAB : An Introduction with Applications (3rd Ed., Amos G=
ilat)
Solution manual MATLAB : An Introduction with Applications (4th Ed., Amos G=
ilat)
Solution manual Matlab : A Practical Introduction to Programming and Proble=
m Solving (Stormy Attaway)
Solution manual Matlab : A Practical Introduction to Programming and Proble=
m Solving (2nd Ed., Stormy Attaway)
Solution manual Data, Statistics, and Decision Models with Excel (Harnett &=
 Horrell)=20
Solution manual Understanding Analysis (Stephen Abbott)
Solution manual Time Series Analysis With Applications in R (2nd Ed., Jonat=
han D. Cryer & Kung-Sik Chan)
Solution manual Time Series Analysis and Its Applications : With R Examples=
 (2nd Ed., Robert Shumway & David Stoffer)
Solution manual Doing Statistics for Business with Excel : Data, Inference,=
 and Decision Making (2nd Ed. Pelosi & Sandifer)
Solution manual Engineering with Excel (3rd Ed., Ronald W. Larsen)
Solution manual Spreadsheet Tools for Engineers Using Excel 2007 (Byron Got=
tfried)
Solution manual Spreadsheet Tools for Engineers using Excel (2nd Ed. Byron =
Gottfried)
Solution manual Spreadsheet Tools for Engineers using Excel (3rd Ed. Byron =
Gottfried)
Solution manual Introduction to Matlab 7 (Etter, Kuncicky & Moore)
Solution manual Introduction to Matlab 6 for Engineers (1st Ed., William Pa=
lm III)
Solution manual Introduction to Matlab 7 for Engineers (2nd Ed., William Pa=
lm III)
Solution manual Introduction to Matlab for Engineers (3rd Ed., William Palm=
 III)

Solution manual A Concise Introduction to MATLAB (William J Palm III)
Solution manual Numerical Methods for Engineers (Bilal M. Ayyub, Richard H.=
 McCuen)
Solution manual Numerical Methods for Engineers (4th Ed. Steven Chapra, Ray=
mond Canale)
Solution manual Numerical Methods for Engineers (5th Ed. Steven Chapra, Ray=
mond Canale)
Solution manual Numerical Methods for Engineers (6th Ed. Steven Chapra, Ray=
mond Canale)
Solution manual Applied Numerical Methods with MATLAB for Engineers and Sci=
entists (1st Ed., Steven Chapra)
Solution manual Applied Numerical Methods with MATLAB for Engineers and Sci=
entists (2nd Ed., Steven Chapra)
Solution manual Applied Numerical Methods with MATLAB for Engineers and Sci=
entists (3rd Ed., Steven Chapra)
Solution manual MATLAB for Engineers (1st Ed., Holly Moore)
Solution manual MATLAB for Engineers (2nd Ed., Holly Moore)
Solution manual Statistics for Engineers and Scientists (1st Ed., William N=
avidi)
Solution manual Statistics for Engineers and Scientists (2nd Ed., William N=
avidi)
Solution manual Statistics for Engineers and Scientists (3rd Ed., William N=
avidi)
Solution manual Principles of Statistics for Engineers and Scientists (Will=
iam Navidi)
Solution manual Elementary Statistics (1st Ed., William Navidi, Barry Monk)
Solution manual Probability (Jim Pitman)
Solution manual Basic Probability Theory (Robert B. Ash)
Solution manual An Introduction to Stochastic Modeling (3rd Ed., Samuel Kar=
lin & Howard M. Taylor)
Solution manual An Introduction to Stochastic Modeling (4th Ed., Mark Pinsk=
y & Samuel Karlin)
Solution manual Stochastic Calculus for Finance (Steven E. Shreve)
Solution manual Markov Processes for Stochastic Modeling (Oliver Ibe)
Solution manual Mathematical Statistics with Applications (K.M. Ramachandra=
n & Chris Tsokos)
Solution manual Probability : A Graduate Course (Allan Gut)=20
Solution manual Linear Algebra Done Right (2nd Ed., Sheldon Axler)
Solution manual Precalculus : A Prelude to Calculus (Sheldon Axler)=20
Solution manual Statistics for Business (Derek Waller)
Solution manual An Introduction to the Mathematics of Financial Derivatives=
 (2nd Ed., Salih Neftci)
Solution manual Elementary Number Theory with Applications (2nd Ed., Thomas=
 Koshy)
Solution manual Introduction to Probability Models (9th Ed., Sheldon Ross)
Solution manual Introduction to Probability Models (10th Ed., Sheldon Ross)
Solution manual Introductory Statistics (2nd Ed., Sheldon Ross)
Solution manual Introductory Statistics (3rd Ed., Sheldon Ross)
Solution manual Introduction to Probability and Statistics for Engineers an=
d Scientists (4th Ed., Sheldon Ross)
Solution manual Basic Mathematics through Applications (4th Ed. by Akst, Br=
agg)
Solution manual Developmental Mathematics (6th Ed., Bittinger & Beecher)

Solution manual Developmental Mathematics (7th Ed., Bittinger & Beecher)
Solution manual Developmental Mathematics : Basic Mathematics and Algebra (=
1st Ed., Lial, Hornsby, McGinnis, Salzman & Hestwood)
Solution manual Developmental Mathematics : Basic Mathematics and Algebra (=
2nd Ed., Lial, Hornsby, McGinnis, Salzman & Hestwood)
Solution manual Essential Mathematics (2nd Ed., Margaret Lial & Stanley Sal=
zman)
Solution manual Essential Mathematics (3rd Ed., Margaret Lial & Stanley Sal=
zman)
Solution manual Prealgebra & Introductory Algebra (2nd Ed. by Elayn El Mart=
in-Gay)
Solution manual Prealgebra (5th Ed., Bittinger, Ellenbogen & Johnson)
Solution manual Prealgebra (5th Ed., Elayn El Martin-Gay)
Solution manual Prealgebra : An Integrated Approach (Lial & Hestwood)
Solution manual Integrated Arithmetic and Basic Algebra (4th Ed., Jordan & =
Palow)
Solution manual Introductory Algebra through Applications (1st Ed., Akst & =
Bragg)
Solution manual Introductory Algebra through Applications (2nd Ed., Akst & =
Bragg)
Solution manual Beginning Algebra (10th Ed., Lial, Hornsby & McGinnis)
Solution manual Elementary Algebra Early Graphing for College Students (3rd=
 Ed., Allen R. Angel)
Solution manual Intermediate Algebra with Applications & Visualization (3rd=
 Ed., Rockswold & Krieger)
Solution manual Intermediate Algebra (10th Ed., Lial, Hornsby & McGinnis)
Solution manual Beginning and Intermediate Algebra (4th Ed., Lial, Hornsby =
& McGinnis)
Solution manual Elementary and Intermediate Algebra : Graphs & Models (3rd =
Ed., Bittinger, Ellenbogen & Johnson)
Solution manual Algebra for College Students (4th Ed., Mark Dugopolski)
Solution manual Algebra for College Students (5th Ed., Mark Dugopolski)
Solution manual Algebra For College Students (6th Ed., Robert F Blitzer)
Solution manual Algebra for College Students (3rd Ed., Allen R. Angel)
Solution manual Algebra for College Students (6th Ed., Lial, Hornsby & McGi=
nnis)
Solution manual Statistics, Data Analysis, and Decision Modeling (3rd Ed., =
James Evans)
Solution manual Statistics, Data Analysis, and Decision Modeling (4th Ed., =
James Evans)
Solution manual College Geometry : A Discovery Approach (2nd Ed., David Kay=
)
Solution manual College Geometry : Using The Geometer's Sketchpad - Prelimi=
nary Edition (Barbara Reynolds & William Fenton)
Solution manual College Geometry : A Problem Solving Approach with Applicat=
ions (2nd Ed., Musser, Trimpe & Maurer)
Solution manual A Survey of Mathematics with Applications (8th Ed., Angel, =
Abbott & Runde)
Solution manual A Survey of Mathematics with Applications: Expanded Edition=
 (8th Ed., Angel, Abbott & Runde)
Solution manual Mathematical Ideas (11th Ed., Miller, Heeren & Hornsby)
Solution manual Mathematical Ideas: Expanded Edition (11th Ed., Miller, Hee=
ren & Hornsby)

Solution manual Mathematical Thinking : Problem-Solving and Proofs (2nd Ed.=
, John P. D'Angelo & Douglas B. West)
Solution manual Thinking Mathematically (4th Ed., Robert F. Blitzer)
Solution manual Introduction to Mathematical Thinking: Algebra and Number S=
ystems (Will J. Gilbert & Scott A. Vanstone)
Solution manual Mathematical Reasoning : Writing and Proof (1st Ed., Ted A.=
 Sundstrom)
Solution manual Mathematical Reasoning : Writing and Proof (2nd Ed., Ted A.=
 Sundstrom)
Solution manual Mathematical Reasoning for Elementary Teachers (4th Ed., Ca=
lvin T. Long & Duane W. DeTemple)
Solution manual Mathematical Reasoning for Elementary Teachers (5th Ed., Lo=
ng, DeTemple & Millman)
Solution manual Mathematics for Elementary School Teachers (4th Ed., O'Daff=
er, Charles, Cooney, Dossey & Schielack)
Solution manual Mathematics for Elementary Teachers (2nd Ed., Sybilla Beckm=
ann)
Solution manual Finite Mathematics and Calculus with Applications (7th Ed.,=
 Lial, Greenwell & Ritchey)
Solution manual Finite Mathematics and Calculus with Applications (8th Ed.,=
 Lial, Greenwell & Ritchey)
Solution manual Additional Calculus Topics (11th Ed., Barnett, Ziegler & By=
leen)
Solution manual College Mathematics for Business, Economics, Life Sciences =
& Social Sciences (11th Ed., Barnett, Ziegler & Byleen)
Solution manual Introductory Mathematical Analysis for Business, Economics =
and the Life and Social Sciences (12th Ed., Haeussler, Paul & Wood)
Solution manual Finite Mathematics for Business, Economics, Life Sciences a=
nd Social Sciences (11th Ed., Barnett, Ziegler, Byleen)
Solution manual Finite Mathematics (9th Ed., Lial, Greenwell & Ritchey)
Solution manual Calculus and Its Applications (9th Ed., Bittinger & Ellenbo=
gen)
Solution manual Calculus for Business, Economics, Life Sciences & Social Sc=
iences (11th Ed., Barnett, Ziegler & Byleen)
Solution manual Calculus with Applications (9th Ed., Lial, Greenwell & Ritc=
hey)
Solution manual Calculus with Applications : Brief Version (9th Ed., Lial, =
Greenwell & Ritchey)
Solution manual Concepts of Calculus with Applications (Martha Goshaw)
Solution manual University Calculus : Elements with Early Transcendentals (=
Hass, Weir & Thomas, Jr.)
Solution manual Thomas' Calculus, Early Transcendentals: Media Upgrade (11t=
h Ed., Thomas Jr., Weir, Hass & Giordano)
Solution manual Thomas' Calculus: Media Upgrade (11th Ed., Thomas Jr., Weir=
, Hass & Giordano)
Solution manual University Calculus : Alternate Edition (Hass, Weir & Thoma=
s, Jr.)
Solution manual Differential Equations Computing and Modeling (4th Ed., Edw=
ards & Penney)
Solution manual Differential Equations and Boundary Value Problems : Comput=
ing and Modeling (4th Ed., Edwards & Penney)
Solution manual Elementary Differential Equations with Boundary Value Probl=
ems (6th Ed., Edwards & Penney)

Solution manual Elementary Differential Equations (6th Ed., Edwards & Penne=
y)
Solution manual Fundamentals of Differential Equations (7th Ed., Nagle, Saf=
f & Snider)
Solution manual Fundamentals of Differential Equations with Boundary Value =
Problems (5th Ed., Nagle, Saff & Snider)
Solution manual Differential Equations and Linear Algebra (3rd Ed., Goode &=
 Annin)
Solution manual College Algebra with Trigonometry (9th Ed., Raymond A. Barn=
ett)
Solution manual College Algebra Enhanced with Graphing Utilities (5th Ed., =
Sullivan & Sullivan III)
Solution manual College Algebra (10th Ed., Lial, Hornsby & Schneider)
Solution manual College Algebra : Graphs and Models (3rd Ed., Bittinger, Be=
echer, Ellenbogen & Penna)
Solution manual College Algebra : Graphs and Models (4th Ed., Bittinger, Be=
echer, Ellenbogen & Penna)
Solution manual College Algebra Essentials (8th Ed., Michael Sullivan)
Solution manual College Algebra (3rd Ed., Judith A. Beecher, Judith A. Penn=
a & Marvin L. Bittinger)
Solution manual College Algebra (8th Ed., Michael Sullivan)
Solution manual College Algebra (9th Ed., Michael Sullivan)
Solution manual Algebra and Trigonometry for College Readiness (Margaret L.=
 Lial & John Hornsby)
Solution manual Algebra and Trigonometry Enhanced with Graphing Utilities (=
5th Ed., Sullivan & Sullivan III)
Solution manual Algebra and Trigonometry : Graphs & Models (4th Ed., Bittin=
ger, Beecher, Ellenbogen & Penna)
Solution manual Trigonometry : A Unit Circle Approach (8th Ed., Michael Sul=
livan)
Solution manual Precalculus (3rd Ed., Lial, Hornsby & Schneider)
Solution manual Precalculus (4th Ed., Lial, Hornsby & Schneider)
Solution manual Precalculus : Enhanced with Graphing Utilities (5th Ed., Su=
llivan & Sullivan III)
Solution manual Precalculus : Functions and Graphs (3rd Ed. Mark Dugopolski=
)
Solution manual Precalculus : Graphs & Models and Graphing (4th Ed., Bittin=
ger, Beecher, Ellenbogen & Penna)
Solution manual Discrete and Combinatorial Mathematics (5th ed., Ralph P. G=
rimaldi)
Solution manual Discrete Mathematics (Sherwood Washburn, Thomas Marlowe & C=
harles T. Ryan)
Solution manual Discrete Mathematics (5th ed., John Dossey, Albert Otto, La=
wrence Spence & Charles Vanden Eynden)
Solution manual Mathematics for New Technologies (Don Hutchison & Mark Yann=
otta)
Solution manual Fundamental Finite Element Analysis and Applications: with =
Mathematica and Matlab Computations (Asghar Bhatti)
Solution manual Advanced Topics in Finite Element Analysis of Structures: W=
ith Mathematica and MATLAB Computations (Asghar Bhatti)=20
Solution manual The Finite Element Method in Engineering (4th Ed., by Rao)
Solution manual An Introduction to the Finite Element Method (3rd Ed., J. N=
. Reddy)

Solution manual Fundamentals of Finite Element Analysis (1st Ed., David V. =
Hutton)=20
Solution manual Simulation Modeling and Analysis (3rd Ed., Averill Law & Da=
vid Kelton)
Solution manual Simulation Modeling and Analysis (4th Ed., Averill Law)
Solution manual The Finite Element Method : Its Basis and Fundamentals (6th=
 Ed., Zienkiewicz, R. L. Taylor & J.Z. Zhu)
Solution manual Algebra : Form and Function (William McCallum, Eric Connall=
y & Deborah Hughes-Hallett)
Solution manual Algebra : Form and Function, Preliminary Edition (William M=
cCallum, Eric Connally & Deborah Hughes-Hallett)
Solution manual Applied Calculus (2nd Ed., Deborah Hughes-Hallett, et al.)
Solution manual Applied Calculus (3rd Ed., Deborah Hughes-Hallett, et al.)
Solution manual Applied Calculus (4th Ed., Deborah Hughes-Hallett, et al.)
Solution manual Calculus : Multivariable (3rd Ed., William G. McCallum, Deb=
orah Hughes-Hallett, et al.)
Solution manual Calculus : Multivariable (4th Ed., William G. McCallum, Deb=
orah Hughes-Hallett, et al.)
Solution manual Calculus : Multivariable (5th Ed., William G. McCallum, Deb=
orah Hughes-Hallett, et al.)
Solution manual Calculus : Single Variable (3rd Ed., Deborah Hughes-Hallett=
, Andrew M. Gleason, et al.)
Solution manual Calculus : Single Variable (4th Ed., Deborah Hughes-Hallett=
, Andrew M. Gleason, et al.)
Solution manual Calculus : Single Variable (5th Ed., Deborah Hughes-Hallett=
, Andrew M. Gleason, et al.)
Solution manual Calculus : Single and Multivariable (3rd Ed., Deborah Hughe=
s-Hallett, Andrew M. Gleason, et al.)
Solution manual Calculus : Single and Multivariable (4th Ed., Deborah Hughe=
s-Hallett, Andrew M. Gleason, et al.)
Solution manual Calculus : Single and Multivariable (5th Ed., Deborah Hughe=
s-Hallett)
Solution manual Functions Modeling Change : A Preparation for Calculus - Te=
xas Edition (2nd Ed., Eric Connally, Deborah Hughes-Hallett & Andrew M. Gle=
ason)
Solution manual Functions Modeling Change : A Preparation for Calculus (2nd=
 Ed., Eric Connally, Deborah Hughes-Hallett, et al.)
Solution manual Functions Modeling Change : A Preparation for Calculus (3rd=
 Ed., Eric Connally)
Solution manual Differential Equations (A. King, J. Billingham, S. Otto)=20
Solution manual Regression Methods in Biostatistics : Linear, Logistic, Sur=
vival, and Repeated Measures Models (Eric Vittinghoff, David Glidden, Steph=
en Shiboski, Charles McCulloch)
Solution manual A Modern Introduction to Probability and Statistics : Under=
standing Why and How (F.M. Dekking, C. Kraaikamp, H.P. Lopuha=E4, L.E. Mees=
ter)
Solution manual Statistical Methods for the Analysis of Repeated Measuremen=
ts (Charles S. Davis)
Solution manual Bayesian Core : A Practical Approach to Computational Bayes=
ian Statistics (Jean-Michel Marin, Christian Robert)
Solution manual The Bayesian Choice : From Decision-Theoretic Foundations t=
o Computational Implementation (2nd Ed., Christian Robert)
Solution manual Essentials of Stochastic Processes (Rick Durrett)

```
Solution manual Methods of Multivariate Statistics (Muni Srivastava)
Solution manual Regression Analysis : Theory, Methods, and Applications (As=
hish Sen & Muni Srivastava)
Solution manual Applied Probability and Statistics (Mario Lefebvre)
Solution manual Basic Probability Theory with Applications (Mario Lefebvre)
Solution manual Foundations of Hyperbolic Manifolds (2nd Ed., John Ratcliff=
e)
Solution manual Fourier and Laplace Transforms (R. J. Beerends , H. G. ter =
Morsche)
Solution manual Infinite-Dimensional Dynamical Systems (James C. Robinson)
Solution manual Mathematical Methods for Physics and Engineering, (3rd Ed.,=
 Riley, Hobson & Bence)
Solution manual Numerical Methods in Engineering with MATLAB (Jaan Kiusalaa=
s)=20
Solution manual Numerical Methods in Engineering with Python (Jaan Kiusalaa=
s)
Solution manual An Introduction to Numerical Analysis (Endre Suli and David=
 Mayers)
Solution manual Fundamentals of Engineering Numerical Analysis  (Parviz Moi=
n)
Solution manual Statistical Design (George Casella)
Solution manual Statistical Inference (2nd Ed., George Casella, Roger L. Be=
rger)
Solution manual Monte Carlo Statistical Methods (2nd Ed., Christian P. Robe=
rt, George Casella)
Solution manual Introducing Monte Carlo Methods with R (Christian Robert & =
George Casella)
Solution manual Introduction to Mathematical Structures and Proofs (Larry J=
. Gerstein)
Solution manual Analyzing Categorical Data (Jeffrey S. Simonoff)=20
Solution manual Fundamentals of Complex Analysis with Applications to Engin=
eering, Science, and Mathematics (3rd Ed., E. Saff & Arthur Snider)
Solution manual Probability & Statistics for Engineers & Scientists (8th Ed=
., Walpole, Myers, Ye)
Solution manual Probability & Statistics for Engineers & Scientists (9th Ed=
., Walpole, Myers, Ye)
Solution manual Statistics for Engineering and the Sciences (5th Ed., Mende=
nhall & Sincich)

List of Solutions Manuals and Test Banks=20
----------------------------------------

contact to :         mattosbw1@gmail.com                     mattosbw1(at)g=
mail.com
  =20

NOTE :  "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
```

ST BANKS.

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Math, Statistics & Probability :

Solution manual A Second Course in Statistics : Regression Analysis (6th Ed=
., Mendenhall & Sincich)
Solution manual A Second Course in Statistics : Regression Analysis (7th Ed=
., Mendenhall & Sincich)
Solution manual Miller & Freund's Probability and Statistics for Engineers =
(7th Ed., Johnson, Miller, Freund)
Solution manual Miller & Freund's Probability and Statistics for Engineers =
(8th Ed., Johnson, Miller, Freund)
Solution manual Numerical Methods Using Matlab (4th Ed., Mathews & Fink)
Solution manual Applied Numerical Analysis Using MATLAB (2nd Ed., Laurene v=
. Fausett)
Solution manual Applied Numerical Analysis (7th Ed., Curtis F. Gerald, Patr=
ick O. Wheatley)
Solution manual Friendly Introduction to Numerical Analysis (Bradie)
Solution manual Elementary Linear Algebra (2nd Ed., Spence, Insel & Friedbe=
rg)
Solution manual Elementary Linear Algebra with Applications (9th Ed., Kolma=
n & Hill)
Solution manual Introductory Linear Algebra : An Applied First Course (8th =
Ed., Kolman & Hill)
Solution manual Linear Algebra with Applications (6th Ed., S. Leon)
Solution manual Linear Algebra with Applications (7th Ed., S. Leon)
Solution manual Linear Algebra with Applications (8th Ed., S. Leon)
Solution manual Linear Algebra for Engineers and Scientists Using Matlab (H=
ardy)
Solution manual Linear Algebra with Applications (3rd Ed., Bretscher)
Solution manual Linear Algebra with Applications (4th Ed., Bretscher)
Solution manual Modern Matrix Algebra (Hill & Kolman)
Solution manual Matrix Methods : Applied Linear Algebra (3rd Ed., Richard B=
ronson & Gabriel B. Costa)
Solution manual A Transition to Abstract Mathematics : Learning Mathematica=
l Thinking and Writing (2nd Ed., Randall Maddox)
Solution manual Partial Differential Equations and Boundary Value Problems =
with Fourier Series (2nd ed., Asmar)

Solution manual Applied Partial Differential Equations (4th Ed., Haberman)
Solution manual Technical Calculus (5th Ed., Dale Ewen, Joan S. Gary & Jame=
s E. Trefzger)
Solution manual Technical Mathematics (2th Ed., Dale Ewen, Joan S. Gary & J=
ames E. Trefzger)
Solution manual Technical Mathematics with Calculus (2th Ed., Dale Ewen, Jo=
an S. Gary & James E. Trefzger)
Solution manual Introductory Mathematics (4th Ed., Cook)
Solution manual Mathematics for the Technical Trades (Cook)
Solution manual College Mathematics (7th Ed., Cleaves & Hobbs)
Solution manual Fundamentals of Statistics (2nd Ed., Michael III Sullivan)
Solution manual Fundamentals of Statistics (3rd Ed., Michael III Sullivan)
Solution manual Statistics : Informed Decisions Using Data (2nd Ed., Michae=
l III Sullivan)
Solution manual Statistics : Informed Decisions Using Data (3rd Ed., Michae=
l III Sullivan)
Solution manual Statistics : Informed Decisions Using Data (4th Ed., Michae=
l III Sullivan)
Solution manual Modern Elementary Statistics (12th Ed., John E. Freund, Ben=
jamin M. Perles)
Solution manual Statistics : The Art and Science of Learning From Data (Agr=
esti & Franklin)
Solution manual Statistics : The Art and Science of Learning From Data (2nd=
 Ed., Agresti & Franklin)
Solution manual Statistics : The Art and Science of Learning From Data (3rd=
 Ed., Agresti & Franklin)
Solution manual Elementary Statistics : Picturing the World (3rd Ed., Larso=
n & Farber)
Solution manual Elementary Statistics : Picturing the World (4th Ed., Larso=
n & Farber)
Solution manual Elementary Statistics : Picturing the World (5th Ed., Larso=
n & Farber)
Solution manual A First Course in Statistics (9th Ed., McClave & Sincich)
Solution manual A First Course in Statistics (10th Ed., McClave & Sincich)
Solution manual A First Course in Statistics (11th Ed., McClave & Sincich)
Solution manual Statistics (10th Ed., McClave & Terry Sincich)
Solution manual Statistics (11th Ed., McClave & Terry Sincich & William Men=
denhall)
Solution manual Statistics (12th Ed., McClave & Terry Sincich)
Solution manual Interactive Statistics (3rd Ed., Martha Aliaga & Brenda Gun=
derson)
Solution manual Statistics for the Life Sciences (3rd Ed., Samuels & Witmer=
)
Solution manual Statistics for the Life Sciences (4th Ed., Samuels, Witmer =
& Schaffner)
Solution manual Applied Statistics and the SAS Programming Language (5th Ed=
., Cody & Smith)
Solution manual Biostatistics for the Health Sciences (R. Clifford Blair & =
Richard Taylor)
Solution manual Biostatistics : How It Works (Steve Selvin)
Solution manual Business Statistics : First Course (4th Ed., Levine, Krehbi=
el & Berenson)
Solution manual Business Statistics : First Course (5th Ed., Levine, Krehbi=

el & Berenson)
Solution manual Course in Business Statistics (4th Ed., Groebner, Shannon, =
Fry & Smith)
Solution manual Business Statistics : A Decision Making Approach (6th Ed., =
Groebner, Shannon, Fry & Smith)
Solution manual Business Statistics : A Decision-Making Approach (7th Ed., =
Groebner, Shannon, Fry & Smith)
Solution manual Business Statistics : A Decision-Making Approach (8th Ed., =
Groebner, Shannon, Fry & Smith)
Solution manual Statistics for Business & Economics (10th Ed., McClave, Ben=
son & Sincich)   =20
Solution manual Statistics for Managers Using Excel (5th Ed., Levine)=20
Solution manual Statistics for Managers Using Microsoft Excel (4th Ed., Lev=
ine, Stephan, Krehbiel & Berenson)
Solution manual Statistics for Business and Economics (5th Ed., Newbold, Ca=
rlson & Thorne)
Solution manual Statistics for Business and Economics (6th Ed., Newbold, Ca=
rlson & Thorne)
Solution manual Statistics for Business and Economics (7th Ed., Newbold, Ca=
rlson & Thorne)
Solution manual Basic Business Statistics : Concepts and Applications (10th=
 Ed., Berenson, Krehbiel & Levine)
Solution manual Basic Business Statistics (11th Ed., Berenson, Levine & Kre=
hbiel)
Solution manual John E. Freund's Mathematical Statistics with Applications =
(7th Ed., Miller)=20
Solution manual Probability and Statistical Inference (7th Ed., Hogg & Tani=
s)
Solution manual Probability and Statistical Inference (8th Ed., Hogg & Tani=
s)
Solution manual Introduction to Mathematical Statistics (6th Ed., Hogg, Cra=
ig & McKean)
Solution manual Introduction to Mathematical Statistics (7th Ed., Hogg, Cra=
ig & McKean)
Solution manual Introduction to Mathematical Statistics and Its Application=
s (4th Ed., Larsen & Marx)
Solution manual Introduction to Mathematical Statistics and Its Application=
s (5th Ed., Larsen & Marx)
Solution manual A Brief Course in Mathematical Statistics (Hogg & Tanis)
Solution manual Fundamentals of Probability, with Stochastic Processes (3rd=
 Ed., Saeed Ghahramani)
Solution manual A First Course in Probability (7th Ed., Sheldon Ross)
Solution manual A First Course in Probability (8th Ed., Sheldon Ross)
Solution manual Applied Multivariate Statistical Analysis (6th Ed., Johnson=
 & Wichern)
Solution manual Multivariate Data Analysis (6th Ed., Hair, Black, Babin, An=
derson & Tatham)
Solution manual Multivariate Data Analysis (7th Ed., Hair, Black, Babin, An=
derson)
Solution manual Essential MATLAB for Engineers and Scientists (3rd Ed., Bri=
an Hahn & Dan Valentine)
Solution manual Essential MATLAB for Engineers and Scientists (4th Ed., Bri=
an Hahn & Dan Valentine)

Solution manual Introduction to Applied Statistical Signal Analysis : Guide=
 to Biomedical and Electrical Engineering Applications (3rd Ed. Richard Shi=
avi)
Solution manual Construction Mathematics (Surinder Virdi & Roy Baker)
Solution manual Numerical Methods in Biomedical Engineering (Stanley Dunn, =
Alkis Constantinides & Prabhas Moghe)
Solution manual Probability and Statistics with Integrated Software Routine=
s (Ronald Deep)
Solution manual Finite Element Analysis with Error Estimators : An Introduc=
tion to the FEM and Adaptive Error Analysis for Engineering Students (J. Ak=
in)
Solution manual Basic Engineering Mathematics (4th Ed., John Bird)
Solution manual Engineering Mathematics (4th Ed., John Bird)
Solution manual Engineering Mathematics (5th Ed., John Bird)
Solution manual Higher Engineering Mathematics (5th Ed., John Bird)
Solution manual Construction Mathematics (Virdi & Baker)
Solution manual Mathematics for Electrical Engineering and Computing (Mary =
Attenborough)
Solution manual Probability and Random Processes : With Applications to Sig=
nal Processing and Communications (Miller & Childers)
Solution manual Introductory Statistics for Engineering Experimentation (Pe=
ter Nelson, Karen Copeland & Marie Coffin)
Solution manual Understanding Engineering Mathematics (Bill Cox)
Solution manual Statistics And Probability For Engineering Applications Wit=
h Microsoft Excel (Decoursey)
Solution manual Business Math Using Calculators : With 10-Key Computer Assi=
sted Instruction (Burton)
Solution manual Mathematics for Economics and Business (5th Ed., Ian Jacque=
s)
Solution manual Business Math, Brief (7th Ed., Cleaves & Hobbs)
Solution manual Math for Merchandising: A Step-by-Step Approach (3rd Ed., M=
oore)
Solution manual Mathematics for Business (7th Ed., Salzman , Miller & Clend=
enen)
Solution manual Mathematics for Business (8th Ed., Salzman , Miller & Clend=
enen)
Solution manual Basic College Mathematics with Early Integers (K. Elayn Mar=
tin-Gay)
Solution manual Developmental Mathematics (K. Elayn Martin-Gay)
Solution manual An Introduction to Analysis (3rd Ed., William Wade)
Solution manual An Introduction to Analysis (4th Ed., William Wade)
Solution manual A Friendly Introduction to Analysis (2nd Ed., Witold A.J. K=
osmala)
Solution manual Advanced Calculus (Gerald Folland)
Solution manual Analysis : With an Introduction to Proof (4th Ed., Steven R=
. Lay)
Solution manual Essentials of Basic College Mathematics (John Jr Tobey, Jr.=
, Jeffrey Slater)
Solution manual Basic College Mathematics (5th Ed., John Tobey & Jeffrey Sl=
ater)
Solution manual Prealgebra (3rd Ed., Jamie Blair, John Tobey & Jeffrey Sla=
ter)
Solution manual Elementary Algebra Early Graphing for College Students (3rd=

```
 Ed., Allen Angel)
Solution manual Elementary Algebra (Michael Sullivan III, Katherine R. Stru=
ve & Janet Mazzarella)
Solution manual Elementary Algebra for College Students (7th Ed., Allen R. =
Angel)
Solution manual Experiencing Introductory and Intermediate Algebra Through =
Functions and Graphs (3rd Ed., JoAnne Thomasson & Robert Pesut)
Solution manual Introductory Algebra (3rd Ed., K. Elayn Martin-Gay)
Solution manual Beginning Algebra (6th Ed., John Jr Tobey & Jeffrey Slater)
Solution manual Beginning Algebra : Early Graphing (Jamie Blair, John Tobey=
 & Jeffrey Slater)
Solution manual Beginning and Intermediate Algebra (2nd Ed., Jamie Blair, J=
ohn Tobey & Jeffrey Slater)
Solution manual Introductory Algebra (4th Ed., Robert Blitzer)
Solution manual Introductory and Intermediate Algebra (2nd Ed., Robert Blit=
zer)
Solution manual Intermediate Algebra for College Students (7th Ed., Allen A=
ngel)
Solution manual Intermediate Algebra (Michael Sullivan III & Katherine Stru=
ve)
Solution manual Intermediate Algebra (3rd Ed., K. Elayn Martin-Gay)
Solution manual Essentials of Intermediate Algebra for College Students (Ro=
bert Blitzer)
Solution manual Intermediate Algebra (4th Ed., Robert Blitzer)
Solution manual Intermediate Algebra for College Students (5th Ed., Robert =
Blitzer)
Solution manual Algebra A Combined Approach (3rd Ed., K. Elayn Martin-Gay)
Solution manual Elementary & Intermediate Algebra (Michael Sullivan III, Ka=
therine R. Struve & Janet Mazzarella)
Solution manual Essentials of Introductory and Intermediate Algebra for Col=
lege Students (Robert F. Blitzer)
Solution manual Algebra for College Students (3rd Ed., Allen R. Angel)
Solution manual Algebra for College Students (5th Ed., Robert F Blitzer)
Solution manual College Algebra Essentials (8th Ed., Michael Sullivan)
Solution manual College Algebra (4th Ed., Robert Blitzer)
Solution manual College Algebra Essentials (2nd Ed., Robert F. Blitzer)
Solution manual College Algebra : An Early Functions Approach (Robert F. Bl=
itzer)
Solution manual College Algebra : Concepts Through Functions (1st Ed., Mich=
ael Sullivan III & Michael Sullivan)
Solution manual College Algebra : Concepts Through Functions (2nd Ed., Mich=
ael Sullivan III & Michael Sullivan)
Solution manual College Algebra Enhanced with Graphing Utilities (4th Ed., =
Michael Sullivan III & Michael Sullivan)
Solution manual Essentials of College Algebra : Enhanced with Graphing Util=
ities (4th Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Algebra and Trigonometry (8th Ed., Michael Sullivan)
Solution manual Algebra and Trigonometry (3rd Ed., Robert F. Blitzer)
Solution manual Algebra and Trigonometry: An Early Functions Approach (Robe=
rt Blitzer)=20
Solution manual Algebra & Trigonometry (7th Ed., Michael Sullivan)
Solution manual Algebra and Trigonometry Enhanced With Graphing Utilities (=
4th Ed., Michael Sullivan III & Michael Sullivan)
```

Solution manual Trigonometry (7th Ed., Michael Sullivan)
Solution manual Trigonometry (8th Ed., Michael Sullivan)
Solution manual Trigonometry Enhanced with Graphing Utilities (4th Ed., Mic=
hael Sullivan III & Michael Sullivan)
Solution manual Precalculus (8th Ed., Michael Sullivan)
Solution manual Precalculus (3rd Ed., Robert Blitzer)
Solution manual Precalculus (4th Ed., Robert Blitzer)
Solution manual Precalculus (1st Ed., J. S. Ratti & Marcus S. McWaters)
Solution manual Precalculus : A Right Triangle Approach (2nd Ed., J. S. Rat=
ti & Marcus S. McWaters)
Solution manual Precalculus Essentials (2nd Ed., Robert Blitzer)
Solution manual Precalculus Essentials (3rd Ed., Robert Blitzer)
Solution manual Precalculus : Concepts Through Functions, A Unit Circle App=
roach to Trigonometry (1st Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Precalculus : Concepts Through Functions, A Unit Circle App=
roach to Trigonometry (2nd Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Precalculus : Concepts Through Functions, A Right Triangle =
Approach to Trigonometry (1st Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Precalculus : Concepts Through Functions, A Right Triangle =
Approach to Trigonometry (2nd Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Precalculus Enhanced with Graphing Utilities (4th Ed., Mich=
ael Sullivan III & Michael Sullivan)
Solution manual Precalculus Enhanced with Graphing Utilities (5th Ed., Mich=
ael Sullivan III & Michael Sullivan)
Solution manual Precalculus Essentials : Enhanced with Graphing Utilities (=
4th Ed., Michael Sullivan III & Michael Sullivan)
Solution manual Excursions in Modern Mathematics (5th Ed., Peter Tannenbaum=
)
Solution manual Excursions In Modern Mathematics with Mini-Excursions (6th =
Ed., Peter Tannenbaum)
Solution manual Quantitive Reasoning & the Environment (Greg Langkamp & Jos=
eph Hull)
Solution manual Fundamentals of Mathematics (10th Ed., William M Setek & Mi=
chael A Gallo)
Solution manual Learning Math in Elementary and Middle School & IMAP Packag=
e (4th Ed., Cathcart, Pothier, Vance & Bezuk)
Solution manual Understanding the Math You Teach: Content and Methods for P=
rekindergarten Through Grade 4 (Anita C. Burris)
Solution manual Algebra Connections (Ira J. Papick & UMO University of Miss=
ouri)
Solution manual Calculus Connections (Asma Harcharras, Dorina Mitrea)
Solution manual Data Analysis and Probability Connections: Mathematics for =
Middle School Teachers (Debra A. Perkowski & Michael Perkowski)
Solution manual Geometry Connections (John K. Beem)
Solution manual Elementary Math Modeling Updated (2nd Ed., Mary Ellen Davis=
 & C. Henry Edwards)
Solution manual Additional Calculus Topics (11th Ed., Raymond Barnett, Mich=
ael Ziegler & Karl Byleen)
Solution manual Finite Math and Its Application (9th Ed., Larry J Goldstein=
, David I Schneider & Martha J. Siegel)
Solution manual Finite Mathematics and Its Application (10th Ed., Larry J G=
oldstein, David I Schneider & Martha J. Siegel)
Solution manual Introductory Mathematical Analysis for Business, Economics =

and the Life and social Sciences (11th Ed., Haeussler, Paul & R.J. Wood)
Solution manual Introductory Mathematical Analysis for Business, Economics =
and the Life and Social Sciences (12th Ed., Haeussler, Paul & R.J. Wood)
Solution manual Additional Calculus Topics (9th Ed., Raymond Barnett, Micha=
el Ziegler & Karl Byleen)
Solution manual College Mathematics for Business, Economics, Life Sciences =
and Social Sciences (10th Ed., Raymond Barnett, Michael Ziegler & Karl Byle=
en)
Solution manual Brief Calculus and Its Applications (11th Ed., Larry Goldst=
ein, David Schneider, David Lay & Nakhle Asmar)
Solution manual Brief Calculus and Its Applications (12th Ed., Larry Goldst=
ein, David Schneider, David Lay & Nakhle Asmar)
Solution manual Calculus and its Applications (10th Ed., Larry Goldstein, D=
avid Schneider, David Lay)
Solution manual Calculus and its Applications (11th Ed., Larry Goldstein, D=
avid Schneider, David Lay & Nakhle Asmar)
Solution manual Calculus and its Applications (12th Ed., Larry Goldstein, D=
avid Schneider, David Lay & Nakhle Asmar)
Solution manual Calculus for Business, Economics, Life Sciences and Social =
Sciences (10th Ed., Raymond Barnett, Michael Ziegler & Karl Byleen)
Solution manual Calculus, Early Transcendentals (6th Ed., C. Henry Edwards =
& David Penney)
Solution manual Calculus, Early Transcendentals (7th Ed., C. Henry Edwards =
& David Penney)
Solution manual Calculus (9th Ed., Dale Varberg, Edwin Purcell & Steve Rigd=
on)
Solution manual Calculus Early Transcendentals (Dale Varberg, Edwin Purcell=
& Steve Rigdon)
Solution manual Calculus (3rd Ed., Monty Strauss, Gerald Bradley & Karl Smi=
th)
Solution manual Calculus (6th Ed., Henry Edwards & David E. Penney)
Solution manual Single Variable Calculus (3rd Ed., Monty Strauss, Gerald Br=
adley & Karl Smith)
Solution manual Vector Calculus (3rd Ed., Susan Colley)
Solution manual Applied Linear Algebra (Peter Olver & Cheri Shakiban)
Solution manual Differential Equations and Linear Algebra (2nd Ed., Jerry F=
arlow, James E. Hall, Jean Marie McDill & Beverly West)
Solution manual Differential Equations and Linear Algebra (2nd Ed., C. Henr=
y Edwards & David Penney)
Solution manual Differential Equations and Linear Algebra (3rd Ed., C. Henr=
y Edwards & David Penney)
Solution manual Differential Equations (2nd Ed., John Polking, Al Boggess &=
David Arnold)
Solution manual Differential Equations with Boundary Value Problems (2nd ed=
., John Polking, Al Boggess & David Arnold)
Solution manual Discrete Mathematics with Graph Theory (3rd Ed., Edgar Good=
aire & Michael Parmenter)
Solution manual Essential Discrete Mathematics (Todd Feil & Joan Krone)
Solution manual Statistical Methods for the Social Sciences (4th Ed., Agres=
ti & Finlay)
Solution manual A Brief Course in Mathematical Statistics (Tanis & Hogg)
Solution manual Business Mathematics, 10th Ed. (Miller, Salzman & Clendenen=
)

Solution manual Business Statistics (Triola & Franklin)
Solution manual Business Statistics (1st Ed., Sharpe, De Veaux & Velleman)
Solution manual Business Statistics (2nd Ed., Sharpe, De Veaux & Velleman)
Solution manual Business Statistics : A First Course (Sharpe, De Veaux & Ve=
lleman)
Solution manual Biostatistics for the Biological and Health Sciences with S=
tatdisk (Marc Triola & Mario Triola)
Solution manual Biostatistics : A Guide to Design, Analysis and Discovery (=
2nd Ed., Ronald Forthofer, Eun Lee, Mike Hernandez)
Solution manual A Course in Probability (Neil A. Weiss)
Solution manual Probability and Statistics (3rd Ed., DeGroot & Schervish)
Solution manual Probability and Statistics (4th Ed., DeGroot & Schervish)
Solution manual Statistics for Science and Engineering (John Kinney)
Solution manual Mathematical Proofs :  A Transition to Advanced Mathematics=
```

 (1st Ed., Chartrand, Polimeni & Zhang)
Solution manual Mathematical Proofs : A Transition to Advanced Mathematics =
(2nd Ed., Chartrand, Polimeni & Zhang)
Solution manual Elementary Number Theory (5th Ed., Kenneth H. Rosen)
Solution manual History of Mathematics : Brief Version (Victor J. Katz)
Solution manual Geometry : An Investigative Approach (2nd Ed., Phares G. O'=
Daffer & Stanley Clemens)
Solution manual A First Course in Abstract Algebra (7th Ed., John Fraleigh)
Solution manual Complex Variables with Applications (3rd Ed., David Wunsch)
Solution manual Numerical Analysis with CD-ROM (Timothy Sauer)
Solution manual Numerical Analysis and Scientific Computation (Jeffery Lead=
er)
Solution manual Linear Algebra and Differential Equations (Gary Peterson & =
James Sochacki)
Solution manual Elementary Differential Equations (2nd Ed., Werner Kohler &=
 Lee Johnson)
Solution manual Elementary Differential Equations with Boundary Value Probl=
ems (2nd Ed., Werner Kohler & Lee Johnson)
Solution manual Fundamentals of Differential Equations (6th Ed., Kent B. Na=
gle, Late, Edward B. Saff & Arthur David Snider)
Solution manual Fundamentals of Differential Equations and Boundary Value P=
roblems (4th Ed., Kent B. Nagle, Late, Edward B. Saff & Arthur David Snider=
)
Solution manual Linear Algebra and Its Applications with CD-ROM, Update (3r=
d Ed., David C. Lay)
Solution manual Introduction to Linear Algebra (5th ed., Lee W. Johnson, R.=
 Dean Riess & Jimmy T. Arnold)
Solution manual Calculus for the Life Sciences (Marvin L. Bittinger, Neal B=
rand & John Quintanilla)
Solution manual Calculus with Applications for the Life Sciences (Raymond N=
. Greenwell, Nathan P. Ritchey & Margaret L. Lial)
Solution manual Calculus : An Integrated Approach to Functions and Their Ra=
tes of Change, Preliminary Edition (Robin J. Gottlieb)
Solution manual Calculus (9th Ed., George B. Thomas, Jr. & Ross L. Finney)
Solution manual Thomas' Calculus, Alternate Edition (9th Ed., George B. Tho=
mas, Jr. & Ross L. Finney)
Solution manual Calculus : A Complete Course (2nd Ed., Ross L. Finney, Fran=
klin D. Demana, Bert K. Waits & Daniel Kennedy)
Solution manual Calculus (Elgin H. Johnston & Jerry Mathews)
Solution manual Thomas' Calculus, Updated (10th Ed., George B. Thomas, Jr.,=
 Ross L. Finney, Maurice D. Weir & Frank R. Giordano)
Solution manual Thomas' Calculus (11th Ed., George B. Thomas, Jr., Maurice =
D. Weir, Joel D. Hass & Frank R. Giordano)
Solution manual Thomas' Calculus Early Transcendentals (11th Ed., George B.=
 Thomas, Jr., Maurice D. Weir, Joel D. Hass & Frank R. Giordano)
Solution manual University Calculus (Joel D. Hass, Maurice D. Weir & George=
 B. Thomas, Jr.)
Solution manual University Calculus : Alternate Edition (Joel D. Hass, Maur=
ice D. Weir & George B. Thomas, Jr.)
Solution manual Thomas' Calculus, Media Upgrade (11th Ed., George B. Thomas=
, Jr., Maurice D. Weir & Frank R. Giordano)
Solution manual Thomas' Calculus, Early Transcendentals, Media Upgrade (11t=
h Ed., George B. Thomas, Jr., Maurice D. Weir, Joel D. Hass & Frank R. Gior=

dano)
Solution manual Calculus with Applications (8th Ed., Margaret L. Lial, Raym=
ond N. Greenwell & Nathan P. Ritchey)
Solution manual Calculus with Applications, Brief Version (8th Ed., Margare=
t L. Lial, Raymond N. Greenwell & Nathan P. Ritchey)
Solution manual Finite Mathematics with Applications (9th Ed., Margaret L. =
Lial, Thomas W. Hungerford & John Holcomb)
Solution manual Finite Mathematics with Applications (10th Ed., Margaret L.=
 Lial, Thomas W. Hungerford & John Holcomb)
Solution manual Finite Mathematics (8th Ed., Margaret L. Lial, Raymond N. G=
reenwell & Nathan P. Ritchey)

hool Teachers (8th Ed., Billstein, Libeskind & Lott)
Solution manual A Problem Solving Approach to Mathematics for Elementary Sc=
hool Teachers (9th Ed., Billstein, Libeskind & Lott)
Solution manual A Problem Solving Approach to Mathematics for Elementary Sc=
hool Teachers (10th Ed., Billstein, Libeskind & Lott)
Solution manual Essentials of Using and Understanding Mathematics : A Quant=
itative Reasoning Approach (Jeffrey Bennett & William Briggs)
Solution manual Technical Calculus with Analytic Geometry (4th Ed., Allyn W=
ashington)
Solution manual Basic Technical Mathematics (8th Ed., Allyn Washington)
Solution manual Basic Technical Mathematics (9th Ed., Allyn Washington)
Solution manual Basic Technical Mathematics with Calculus (8th Ed., Allyn W=

ashington)
Solution manual Basic Technical Mathematics with Calculus (9th Ed., Allyn W=
ashington)
Solution manual Basic Technical Mathematics with Calculus Metric Version (8=
th Ed., Allyn Washington)
Solution manual Introduction to Technical Mathematics (5th Ed., Washington,=
 Triola & Reda)
Solution manual A Graphical Approach to Precalculus (4th Ed., Hornsby, Lial=
 & Rockswold)=20
Solution manual A Graphical Approach to Precalculus with Limits (3rd Ed., H=
ornsby, Lial & Rockswold)
Solution manual A Graphical Approach to Precalculus with Limits : A Unit Ci=
rcle Approach (4th Ed., Hornsby, Lial & Rockswold)
Solution manual A Graphical Approach to Precalculus with Limits : A Unit Ci=
rcle Approach (5th Ed., Hornsby, Lial & Rockswold)
Solution manual Precalculus : Functions and Graphs (5th Ed., Demana, Waits,=
 Foley & Kennedy)
Solution manual Precalculus : Graphical, Numerical, Algebraic (7th Ed., Dem=
ana, Waits, Foley & Kennedy)
Solution manual Precalculus : Graphs and Models Graphing Calculator Manual =
Package (3rd Ed., Bittinger, Beecher, Ellenbogen & Penna)
Solution manual Precalculus : Graphs and Models Graphing Calculator Manual =
Package (4th Ed., Bittinger, Beecher, Ellenbogen & Penna)
Solution manual Functioning in the Real World : A Precalculus Experience (2=
nd Ed., Gordon, F. Gordon, Tucker & Siegel)
Solution manual Precalculus with Modeling and Visualization (3rd Ed., Gary =
K. Rockswold)
Solution manual Precalculus with Modeling and Visualization (4th Ed., Gary =
K. Rockswold)
Solution manual Precalculus (2nd Ed., Beecher, Penna & Bittinger)
Solution manual Precalculus (3rd Ed., Beecher, Penna & Bittinger)
Solution manual Precalculus (3rd Ed., Mark Dugopolski)
Solution manual Precalculus (4th Ed., Mark Dugopolski)
Solution manual Precalculus : Functions and Graphs (2nd Ed., Mark Dugopolsk=
i)
Solution manual Precalculus : Functions and Graphs (3rd Ed., Mark Dugopolsk=
i)
Solution manual Fundamentals of Precalculus (Mark Dugopolski)
Solution manual Trigonometry (1st Ed., Mark Dugopolski)
Solution manual Trigonometry (2nd Ed., Mark Dugopolski)
Solution manual Trigonometry (3rd Ed., Mark Dugopolski)
Solution manual Trigonometry (8th Ed., Lial, Hornsby & Schneider)
Solution manual Trigonometry (9th Ed., Lial, Hornsby & Schneider)
Solution manual Trigonometry : A Circular Function Approach (Marie Aratari)
Solution manual A Graphical Approach to Algebra and Trigonometry (4th Ed., =
Hornsby, Lial & Rockswold)
Solution manual A Graphical Approach to Algebra and Trigonometry (5th Ed., =
Hornsby, Lial & Rockswold)
Solution manual Algebra and Trigonometry : Graphs and Models Graphing Calcu=
lator Manual Package (3rd Ed., Bittinger, Beecher, Ellenbogen & Penna)
Solution manual Algebra and Trigonometry (2nd Ed., Beecher, Penna & Bitting=
er)
Solution manual Algebra and Trigonometry (3rd Ed., Beecher, Penna & Bitting=

er)
Solution manual College Algebra and Trigonometry (1st Ed., J. S. Ratti & Ma=
rcus S. McWaters)
Solution manual College Algebra and Trigonometry (2nd Ed., J. S. Ratti & Ma=
rcus S. McWaters)
Solution manual College Algebra and Trigonometry (3rd Ed., Mark Dugopolski)
Solution manual College Algebra and Trigonometry (4th Ed., Mark Dugopolski)
Solution manual College Algebra and Trigonometry : A Unit Circle Approach (=
5th Ed., Mark Dugopolski)
Solution manual Algebra and Trigonometry with Modeling and Visualization (3=
rd Ed., Gary Rockswold)
Solution manual Algebra and Trigonometry with Modeling and Visualization (4=
th Ed., Gary Rockswold)
Solution manual College Algebra and Trigonometry (3rd Ed., Lial, Hornsby & =
Schneider)
Solution manual College Algebra and Trigonometry (4th Ed., Lial, Hornsby & =
Schneider)
Solution manual A Graphical Approach to College Algebra (4th Ed., John Horn=
sby, Margaret Lial & Gary Rockswold)
Solution manual A Graphical Approach to College Algebra (5th Ed., John Horn=
sby, Margaret Lial & Gary Rockswold)
Solution manual College Algebra : Graphs and Models Graphing Calculator Man=
ual Package (3rd Ed., Bittinger, Beecher, Ellenbogen & Penna)
Solution manual College Algebra (J. S. Ratti & Marcus S. McWaters)
Solution manual College Algebra with Modeling and Visualization (3rd Ed., G=
ary Rockswold)
Solution manual College Algebra with Modeling and Visualization (4th Ed., G=
ary Rockswold)
Solution manual Essentials of College Algebra with Modeling and Visualizati=
on (3rd Ed., Gary Rockswold)
Solution manual Essentials of College Algebra (Lial, Hornsby & Schneider)
Solution manual Essentials of College Algebra, Alternate Edition (Lial, Hor=
nsby & Schneider)
Solution manual Essentials of College Algebra (10th Ed., Lial, Hornsby & Sc=
hneider)
Solution manual College Algebra (3rd Ed., Mark Dugopolski)=20
Solution manual College Algebra (4th Ed., Mark Dugopolski)=20
Solution manual College Algebra (5th Ed., Mark Dugopolski)
Solution manual College Algebra in Context with Applications for the Manage=
rial, Life, and Social Sciences (1st Ed., Ronald Harshbarger & Lisa Yocco)
Solution manual College Algebra in Context with Applications for the Manage=
rial, Life, and Social Sciences (2nd Ed., Ronald Harshbarger & Lisa Yocco)
Solution manual College Algebra (2nd Ed., Judith Beecher, Judith Penna & Ma=
rvin Bittinger)
Solution manual College Algebra (9th Ed., Margaret Lial, John Hornsby & Dav=
id Schneider)
Solution manual Essentials of Geometry for College Students (2nd Ed., Marga=
ret Lial, Barbara Brown, Arnold Steffenson & L. Murphy Johnson)
Solution manual Algebra for College Students (5th Ed., Margaret Lial, John =
Hornsby & Terry McGinnis)
Solution manual Introductory and Intermediate Algebra (2nd Ed., Margaret Li=
al, John Hornsby & Terry McGinnis)
Solution manual Introductory and Intermediate Algebra (3rd Ed., Margaret Li=

```
al, John Hornsby & Terry McGinnis)
Solution manual Introductory and Intermediate Algebra (4th Ed., Margaret Li=
al, John Hornsby & Terry McGinnis)
Solution manual Beginning and Intermediate Algebra (3rd Ed., Margaret Lial,=
 John Hornsby & Terry McGinnis)
Solution manual Beginning and Intermediate Algebra (4th Ed., Margaret Lial,=
 John Hornsby & Terry McGinnis)
Solution manual Elementary and Intermediate Algebra (1st Ed., Tom Carson, E=
llyn Gillespie & Bill Jordan)
Solution manual Elementary and Intermediate Algebra (2nd Ed., Tom Carson, E=
llyn Gillespie & Bill Jordan)
Solution manual Elementary and Intermediate Algebra (3rd Ed., Tom Carson, B=
ill Jordan)
Solution manual Introductory and Intermediate Algebra : A Combined Approach=
 (2nd Ed., Marvin Bittinger & Judith Beecher)
Solution manual Introductory and Intermediate Algebra (3rd Ed., Marvin Bitt=
inger & Judith Beecher)
Solution manual Introductory and Intermediate Algebra through Applications =
(2nd Ed., Geoffrey Akst & Sadie Bragg)
Solution manual Elementary and Intermediate Algebra (1st Ed., George Woodbu=
ry)
Solution manual Elementary and Intermediate Algebra (2nd Ed., George Woodbu=
ry)
Solution manual Elementary and Intermediate Algebra (2nd Ed., Mark Dugopols=
ki)=20
Solution manual Elementary and Intermediate Algebra (3rd Ed., Mark Dugopols=
ki)=20
Solution manual Elementary and Intermediate Algebra : Concepts and Applicat=
ions (4th Ed., Marvin Bittinger, David Ellenbogen & Barbara Johnson)
Solution manual Beginning and Intermediate Algebra with Applications and Vi=
sualization (Gary Rockswold & Terry Krieger)
Solution manual Elementary and Intermediate Algebra : Graphs & Models (2nd =
Ed., Marvin Bittinger, David Ellenbogen & Barbara Johnson)
Solution manual Foundations of Mathematics (Marvin Bittinger & Judith Penna=
)
Solution manual Intermediate Algebra (9th Ed., Marvin Bittinger)
Solution manual Intermediate Algebra (10th Ed., Marvin Bittinger)
Solution manual Intermediate Algebra : Graphs & Models (2nd Ed., Marvin Bit=
tinger, David Ellenbogen & Barbara Johnson)
Solution manual Intermediate Algebra : Graphs & Models (3rd Ed., Marvin Bit=
tinger, David Ellenbogen & Barbara Johnson)
Solution manual Intermediate Algebra (8th Ed., Margaret Lial, John Hornsby =
& Terry McGinnis)
Solution manual Intermediate Algebra (9th Ed., Margaret Lial, John Hornsby =
& Terry McGinnis)
Solution manual Intermediate Algebra with Applications and Visualization (2=
nd Ed., Gary Rockswold & Terry Krieger)
Solution manual Intermediate Algebra (Tom Carson, Ellyn Gillespie & Bill Jo=
rdan)
Solution manual Intermediate Algebra (2nd Ed., Tom Carson, Ellyn Gillespie =
& Bill Jordan)
Solution manual Intermediate Algebra (3rd Ed., Tom Carson, Bill Jordan)
Solution manual Intermediate Algebra: Concepts and Applications (7th Ed., M=
```

arvin Bittinger & David Ellenbogen)
Solution manual Beginning Algebra (10th Ed., Margaret Lial, John Hornsby & =
Terry McGinnis)
Solution manual Prealgebra and Introductory Algebra (Marvin Bittinger & Dav=
id Ellenbogen)
Solution manual Prealgebra and Introductory Algebra (2nd Ed., Marvin Bittin=
ger & David Ellenbogen)
Solution manual Introductory Algebra (9th Ed., Marvin Bittinger)
Solution manual Introductory Algebra (10th Ed., Marvin Bittinger)
Solution manual Prealgebra and Introductory Algebra (2nd Ed., Margaret Lial=
, John Hornsby, Terry McGinnis & Diana Hestwood)
Solution manual Prealgebra and Introductory Algebra (3rd Ed., Margaret Lial=
, Diana Hestwood, John Hornsby & Terry McGinnis)
Solution manual Elementary Algebra with Early Systems of Equations (Tom Car=
son & Ellyn Gillespie)
Solution manual Elementary Algebra (2nd Ed., Tom Carson, Ellyn Gillespie & =
Bill Jordan)
Solution manual Elementary Algebra (3rd Ed., Tom Carson, Bill Jordan)
Solution manual Elementary Algebra : Concepts and Applications (6th Ed., Ma=
rvin Bittinger & David Ellenbogen)
Solution manual Elementary Algebra : Concepts and Applications (7th Ed., Ma=
rvin Bittinger & David Ellenbogen)
Solution manual Introductory Algebra (Richelle Blair)
Solution manual Introductory Algebra (8th Ed., Margaret Lial, John Hornsby =
& Terry McGinnis)
Solution manual Introductory Algebra (9th Ed., Margaret Lial, John Hornsby =
& Terry McGinnis)
Solution manual Beginning Algebra with Applications and Visualization (Gary=
 Rockswold & Terry Krieger)
Solution manual Integrated Arithmetic and Basic Algebra (3rd Ed., Bill Jord=
an & William Palow)
Solution manual Introductory Algebra through Applications (Geoffrey Akst & =
Sadie Bragg)
Solution manual Prealgebra (3rd Ed., Margaret Lial & Diana Hestwood)
Solution manual Prealgebra (4th Ed., Margaret Lial & Diana Hestwood)
Solution manual Prealgebra (4th Ed., Marvin Bittinger & David Ellenbogen)
Solution manual Prealgebra (5th Ed., Marvin Bittinger, David Ellenbogen & B=
arbara Johnson)
Solution manual Prealgebra (2nd Ed., Tom Carson)
Solution manual Basic Mathematics (9th Ed., Marvin Bittinger)
Solution manual Basic Mathematics (10th Ed., Marvin Bittinger)
Solution manual Basic Mathematics Preliminary Edition (Robert Prior)
Solution manual Basic Mathematics with Early Integers (Marvin Bittinger & J=
udith Penna)
Solution manual Basic College Mathematics (7th Ed., Margaret Lial, Stanley =
Salzman & Diana Hestwood)
Solution manual Basic College Mathematics (8th Ed., Margaret Lial, Stanley =
Salzman & Diana Hestwood)
Solution manual Basic Mathematics through Applications (3rd Ed., Geoffrey A=
kst & Sadie Bragg)
Solution manual Fundamental Mathematics through Applications (3rd Ed., Geof=
frey Akst & Sadie Bragg)
Solution manual Wave Motion (J. Billingham & A. C. King)

```
Solution manual Solving ODEs with MATLAB (L. F. Shampine, I. Gladwell & S. =
Thompson)
Solution manual Numerical Solution of Partial Differential Equations: An In=
troduction (2nd Ed., K. W. Morton & D. F. Mayers)
Solution manual Measure Theory and Filtering : Introduction and Application=
s (Lakhdar Aggoun & Robert J. Elliott)
Solution manual Mathematical Models in Biology : An Introduction (Elizabeth=
 S. Allman & John A. Rhodes)
Solution manual Insurance Risk and Ruin (David C. M. Dickson)=20
Solution manual Data Analysis and Graphics Using R : An Example-based Appro=
ach (2nd Ed., John Maindonald & John Braun)
Solution manual Applied Optimization with MATLAB Programming (1st Ed., P. V=
enkataraman)
Solution manual Applied Optimization with MATLAB Programming (2nd Ed., P. V=
enkataraman)
Solution manual Convex Optimization (Stephen Boyd & Lieven Vandenberghe)
Solution manual Concrete Abstract Algebra : From Numbers to Gr=F6bner Bases=
 (Niels Lauritzen)
Solution manual A Concrete Approach to Abstract Algebra : From the Integers=
 to the Insolvability of the Quintic (Jeffrey Bergen)
Solution manual Calculus : Concepts and Methods (Ken Binmore & Joan Davies)
Solution manual An Introduction to Partial Differential Equations (Yehuda P=
inchover & Jacob Rubinstein)
Solution manual An Introduction to Ordinary Differential Equations (James C=
. Robinson)
Solution manual An Introduction to Mathematical Physiology and Biology (2nd=
 Ed., J. Mazumdar)
Solution manual An Introduction to Financial Option Valuation : Mathematics=
, Stochastics and Computation (Desmond Higham)
Solution manual An Interactive Introduction to Mathematical Analysis (Jonat=
han Lewin)
Solution manual An Introduction to Mathematical Finance: Options and Other =
Topics (1st Ed., Sheldon M. Ross)

NOTE :  "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.
```

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Physics & Astronomy :

Solution manual Introduction to Solid State Physics (8th Ed., Charles Kitte=
l)
Solution manual Quantum Physics (3rd Ed., Stephen Gasiorowicz)
Solution manual Fundamentals of Nuclear Reactor Physics (Elmer Lewis)
Solution manual Physics of Solar Energy (C. Julian Chen)
Solution manual Solar Engineering of Thermal Processes (3rd Ed., John Duffi=
e & William Beckman)
Solution manual Physics of Condensed Matter (Prasanta Kumar Misra)
Solution Manual Human Body Dynamics (Aydin Tozeren)
Solution manual Solid-State Physics : Introduction to the Theory (2nd Ed., =
James Patterson, Bernard Bailey)
Solution manual Introduction to Nuclear Engineering (3rd Ed., John R. Lamar=
sh & Anthony J. Baratta)
Solution manual Nuclear Energy : An Introduction to the Concepts, Systems, =
and Applications of Nuclear Processes (6th Ed., Raymond L. Murray)
Solution manual Fundamentals of Electromagnetics with Engineering Applicati=
ons (Stuart M. Wentworth)
Solution manual Physics (7th Ed. by Paul E. Tippens)=20
Solution manual Physics (6th Ed., Cutnell & Johnson) =20
Solution manual Physics (7th Ed., Cutnell & Johnson) =20
Solution manual Physics (8th Ed., Cutnell & Johnson)=20
Solution manual Physics (9th Ed., Cutnell & Johnson)
Solution manual Essentials of Physics (Cutnell & Johnson)=20
Solution manual Understanding Physics (1st Ed., Cummings, Laws, Redish & Co=
oney)
Solution manual Introductory Physics : Building Understanding (Jerold Touge=
r)
Solution manual Physics Matters : An Introduction to Conceptual Physics (Ja=
mes Trefil & Robert Hazen)
Solution manual How Things Work : The Physics of Everyday Life (3rd Ed., Lo=
uis Bloomfield)
Solution manual An Introduction to Modern Astrophysics (2nd Ed., Bradley W.=
 Carroll & Dale A. Ostlie)
Solution manual Foundations of Astrophysics (Barbara Ryden & Bradley Peters=
on)
Solution manual Modern Physics (3rd Ed., Kenneth S. Krane)
Solution manual Physics (5th Ed., Halliday, Resnick, Krane)
Solution manual Fundamentals of Physics (6th Ed., David Halliday, Robert Re=
snick & Jearl Walker)

Solution manual Fundamentals of Physics (7th Ed., David Halliday, Robert Re=
snick & Jearl Walker)
Solution manual Fundamentals of Physics (8th Ed., David Halliday, Robert Re=
snick & Jearl Walker)
Solution manual Fundamentals of Physics (9th Ed., David Halliday, Robert Re=
snick & Jearl Walker)
Solution manual The Physics of Everyday Phenomena : A Conceptual Introducti=
on to Physics (3rd Ed., Thomas Griffith)
Solution manual The Physics of Everyday Phenomena : A Conceptual Introducti=
on to Physics (4th Ed., Thomas Griffith)
Solution manual The Physics of Everyday Phenomena : A Conceptual Introducti=
on to Physics (5th Ed., Thomas Griffith)
Solution manual The Physics of Everyday Phenomena : A Conceptual Introducti=
on to Physics (6th Ed., W. Thomas Griffith & Juliet W. Brosing)
Solution manual The Physics of Everyday Phenomena : A Conceptual Introducti=
on to Physics (7th Ed., W. Thomas Griffith & Juliet W. Brosing)
Solution manual Integrated Science (2nd Ed., Tillery et al.)
Solution manual Integrated Science (3rd Ed., Tillery et al.)
Solution manual Integrated Science (4th Ed., Tillery et al.)
Solution manual Physical Science (5th Ed., Tillery)
Solution manual Physical Science (6th Ed., Tillery)
Solution manual Physical Science (7th Ed., Tillery)
Solution manual Physical Science (8th Ed., Tillery)
Solution manual The Physical Universe (11th Ed., Konrad Krauskopf & Arthur =
Beiser)
Solution manual The Physical Universe (12th Ed., Konrad Krauskopf & Arthur =
Beiser)
Solution manual Physics of the Life Sciences (Jay Newman)
Solution manual Introduction to Biomedical Engineering (2nd Ed., John Ender=
le, Susan Blanchard, Joseph Bronzino)
Solution manual Introduction to Biomedical Engineering (3rd Ed., John Ender=
le, Joseph Bronzino)
Solution manual Physics in Biology and Medicine (3rd Ed., Paul Davidovits)
Solution manual Optics (1st Ed., Ajoy Ghatak)
Solution manual Optics (4th Ed., Eugene Hecht)
Solution manual Nonlinear Optics (3rd Ed., Robert Boyd)
Solution manual Introduction to Optics (3rd Ed., Frank L Pedrotti, Leno M P=
edrotti & Leno S Pedrotti)
Solution manual Principles of Physical Optics (Charles Bennett)
Solution manual Optics : Principles and Applications (Kailash Sharma)
Solution manual Continuum Electromechanics (James R. Melcher)
Solution manual Electromagnetic Noise and Quantum Optical Measurements (Her=
mann A. Haus)
Solution Manual Fuel Cell Engines (Matthew M. Mench)
Solution Manual Fuel Cell Fundamentals (1st Ed., Ryan O'Hayre, et. al)
Solution Manual Fuel Cell Fundamentals (2nd Ed., Ryan O'Hayre, Whitney Cole=
lla, Suk-Won Cha, Fritz Prinz)
Solution manual Matter and Interactions I : Modern Mechanics (2nd Ed., Ruth=
 W. Chabay & Bruce A. Sherwood)
Solution manual Matter and Interactions : Volume 1 : Modern Mechanics (3rd =
Ed., Ruth W. Chabay & Bruce A. Sherwood)
Solution manual Matter and Interactions II : Electric and Magnetic Interact=
ions (2nd Ed., Ruth W. Chabay & Bruce A. Sherwood)

Solution manual Matter and Interactions : Volume 2 : Electric and Magnetic =
Interactions (3rd Ed., Ruth W. Chabay & Bruce A. Sherwood)
Solution manual Thermal Stresses (2nd Ed., Noda, Hetnarski & Tanigawa)
Solution manual Introduction to Statistical Physics (Kerson Huang)
Solution manual Extended Irreversible Thermodynamics (3rd Ed., D. Jou, J. C=
asas-Vazquez & G. Lebon)
Solution manual An Introduction to Thermodynamics and Statistical Mechanics=
 (2nd Ed, Keith Stowe)
Solution manual Equilibrium and Non-Equilibrium Statistical Thermodynamics =
(Michel Le Bellac, Fabrice Mortessagne & G. George Batrouni)
Solution manual Elements of Statistical Mechanics: With an Introduction to =
Quantum Field Theory and Numerical Simulation (Ivo Sachs & Siddhartha Sen)
Solution manual Quantum Transport (2nd Ed., Supriyo Datta)
Solution manual Ocean Waves and Oscillating Systems (Johannes Falnes)
Solution manual Statistical Mechanics (2nd Ed., R.K. Pathria)
Solution manual Statistical Mechanics (3rd Ed., R.K. Pathria , Paul D. Beal=
e)
Solution manual Quantum Mechanics : From Basic Principles to Numerical Meth=
ods and Applications (Louis Marchildon)
Solution manual Quantum Mechanics (Gennaro Auletta, Mauro Fortunato & Giorg=
io Parisi)=20
Solution manual Fundamentals of Quantum Mechanics (C.L. Tang)
Solution manual Astronomy : A Physical Perspective (2nd Ed., Marc L. Kutner=
)=20
Solution manual Classical Mechanics (Douglas Gregory)=20
Solution manual Electromagnetic Field Theory Fundamentals (2nd Ed., Singh G=
uru & Hiziroglu)
Solution manual Special Relativity : From Einstein to Strings (P.M. Schwarz=
 & J.H. Schwarz)
Solution manual Gravity : An Introduction to Einstein's General Relativity =
(James Hartle)
Solution manual A Short Course in General Relativity (3rd Ed., James Foster=
 & J. David Nightingale)=20
Solution manual Statistical Thermodynamics (Normand Laurendeau)=20
Solution Manual Introductory Statistical Thermodynamics (Nils Dalarsson , M=
ariana Dalarsson & Leonardo Golubovic)
Solution manual Statistical Thermodynamics and Microscale Thermophysics (Va=
n P. Carey)
Solution manual Thermal Physics (Ralph Baierlein) =20
Solution manual Topics in Atomic Physics (Charles E. Burkhardt, Jacob J. Le=
venthal)
Solution manual Foundations of Quantum Physics (Charles E. Burkhardt, Jacob=
 J. Leventhal)
Solution manual Essential University Physics (2nd Ed., Richard Wolfson)
Solution manual Essential College Physics (Andrew Rex, Richard Wolfson)
Solution manual Applied Physics (8th Ed., Dale Ewen, Ronald Nelson, Neill S=
churter & Erik Gundersen)
Solution manual Applied Physics (9th Ed., Dale Ewen, Neill Schurter & Erik =
Gundersen)
Solution manual Analytical Mechanics (7th Ed., Grant R. Fowles, George Cass=
iday)
Solution manual Orbital Mechanics for Engineering Students (1st Ed., Howard=
 Curtis)

```
Solution manual Orbital Mechanics for Engineering Students (2nd Ed., Howard=
 Curtis)
Solution manual Diagnostic Ultrasound Imaging : Inside Out (Thomas Szabo)
Solution manual Astronomy : A Beginner's Guide to the Universe (5th Ed., Er=
ic Chaisson & Steve McMillan)
Solution manual The Cosmic Perspective (5th Ed., Jeffrey O. Bennett, Megan =
Donahue, Nicholas Schneider & Mark Voit)
Solution manual The Cosmic Perspective Media Update (4th Ed., Jeffrey O. Be=
nnett, Megan Donahue, Nicholas Schneider & Mark Voit)
Solution manual The Essential Cosmic Perspective Media Update (4th Ed., Jef=
frey O. Bennett, Megan Donahue, Nicholas Schneider & Mark Voit)
Solution manual The Essential Cosmic Perspective Media Update (3rd Ed., Jef=
frey O. Bennett, Megan Donahue, Nicholas Schneider & Mark Voit)
Solution manual The Essential Cosmic Perspective (3rd Ed., Jeffrey O. Benne=
tt, Megan Donahue, Nicholas Schneider & Mark Voit)
Solution manual Astronomy Today (5th Ed., Eric Chaisson & Steve McMillan)
Solution manual Astronomy Today (6th Ed., Eric Chaisson & Steve McMillan)
Solution manual Conceptual Physical Science (3rd Ed., Paul G. Hewitt, John =
A. Suchocki & Leslie Hewitt)
Solution manual Conceptual Physical Science (4th Ed., Paul G. Hewitt, John =
A. Suchocki & Leslie Hewitt)
Solution manual Conceptual Integrated Science (Paul G. Hewitt, Suzanne Lyon=
s, John A. Suchocki & Jennifer Yeh)
Solution manual Physics : Concepts & Connections (4th Ed., Art Hobson)
Solution manual Physics : Concepts & Connections (5th Ed., Art Hobson)
Solution manual Conceptual Physics (10th Ed., Paul Hewitt)
Solution manual Conceptual Physics (11th Ed., Paul Hewitt)
Solution manual Conceptual Physics Fundamentals (Paul G. Hewitt)
Solution manual College Physics : A Strategic Approach (2nd Ed., Randall D.=
 Knight, Brian Jones, Stuart Field)
Solution manual College Physics (6th Ed., Jerry Wilson, Anthony Buffa & Bo =
Lou)=20
Solution manual College Physics (7th Ed., Jerry Wilson, Anthony Buffa & Bo =
Lou)
Solution manual College Physics (8th Ed., Young & Geller)
Solution manual Modern Physics (2nd Ed., Randy Harris)
Solution manual Modern Physics for Scientists and Engineers (John Morrison)
Solution manual Solid State Physics : Essential Concepts (David Snoke)
Solution manual Physics with Mastering Physics (3rd Ed., James Walker)
Solution manual Physics with Mastering Physics (4th Ed., James Walker)
Solution manual Active Learning Guide (Alan Van Heuvelen & Eugenia Etkina)
Solution manual E&M TIPERs : Electricity & Magnetism Tasks (C. J. Hieggelke=
, D. P. Maloney, T. L. O'Kuma & Steve Kanim)
Solution manual Physics : Principles with Applications (6th Ed., Douglas C.=
 Giancoli)
Solution manual Physlet=AE Physics : Interactive Illustrations, Exploration=
s and Problems for Introductory Physics (Wolfgang Christian & Mario Belloni=
)
Solution manual University Physics with Modern Physics with Mastering Physi=
cs (11th Ed., Hugh Young & Roger Freedman)
Solution manual University Physics with Modern Physics with Mastering Physi=
cs (12th Ed., Hugh Young & Roger Freedman)
Solution manual Physics for Scientists and Engineers (3rd Ed., Douglas C. G=
```

iancoli)
Solution manual Physics for Scientists and Engineers with Modern Physics (3=
rd Ed., Douglas Giancoli)
Solution manual Physics for Scientists and Engineers with Modern Physics (4=
th Ed., Douglas Giancoli)
Solution manual Physlet=AE Quantum Physics : An Interactive Introduction (M=
ario Belloni, Wolfgang Christian & Anne Cox)
Solution manual Introduction to Electrodynamics (3rd Ed., David J. Griffith=
s)
Solution manual Introduction to Quantum Mechanics (2nd Ed., David Griffiths=
)
Solution manual Quantum Mechanics : An Accessible Introduction (Robert Sche=
rrer)
Solution manual Modern Quantum Mechanics (J. J. Sakurai)
Solution manual Modern Quantum Mechanics (2nd Ed., J. J. Sakurai & Jim Napo=
litano)
Solution manual The Physics of Sound (3rd Ed., Richard Berg & David Stork)
Solution manual Electromagnetism : Principles and Applications (1st Ed., Pa=
ul Lorrain, Dale R. Corson)
Solution manual Classical Electromagnetism (Jerrold Franklin)
Solution manual Classical Electrodynamics (2nd Ed., John David Jackson)
Solution manual Nanoengineering of Structural, Functional and Smart Materia=
ls (Mark Schulz, Ajit Kelkar, Mannur Sundaresan)
Solution manual Introduction to Color Imaging Science (Hsien-Che Lee)
Solution manual An Introduction to Astrobiology (Iain Gilmour & Mark Sephto=
n)
Solution manual An Introduction to Galaxies and Cosmology (Mark HJones & Ro=
bert Lambourne)
Solution manual An Introduction to the Solar System (Neil McBride & Iain Gi=
lmour)
Solution manual Quantum Physics (Michel Le Bellac)
Solution manual Laser Fundamentals (2nd Ed., William T. Silfvast)
Solution manual Laser Electronics (3rd Ed., Joseph T. Verdeyen)
Solution manual Introductory Quantum Optics (Christopher Gerry & Peter Knig=
ht)
Solution manual Introduction to Plasma Physics: With Space and Laboratory A=
pplications (D. A. Gurnett & A. Bhattacharjee)=20
Solution manual A Short Introduction to Quantum Information and Quantum Com=
putation (Michel Le Bellac)
Solution manual A Quantum Approach to Condensed Matter Physics (Philip L. T=
aylor & Olle Heinonen)
Solution manual A First Course in String Theory (Barton Zwiebach)
Solution manual A First Course in Computational Physics and Object-Oriented=
 Programming with C++ (David Yevick)
Solution manual A Course in Modern Mathematical Physics : Groups, Hilbert S=
pace and Differential Geometry (Peter Szekeres)=20
Solution manual Ultrasonic Nondestructive Evaluation Systems: Models and Me=
asurements (Lester W. Schmerr & Sung-Jin Song)
Solution manual Explorations : Stars Galaxies and Planets (1st Ed. Updated,=
 Thomas Arny)
Solution manual Explorations : An Introduction to Astronomy (2nd Ed., Thoma=
s Arny)
Solution manual Explorations : An Introduction to Astronomy (3rd Ed. Update=

```
d, Thomas Arny)
Solution manual Explorations : An Introduction to Astronomy (4th Ed. Update=
d, Thomas Arny)
Solution manual Explorations : An Introduction to Astronomy (5th Ed. Update=
d, Thomas Arny)
Solution manual Astronomy : Journey to the Cosmic Frontier (3rd Ed., John D=
. Fix)
Solution manual Astronomy : Journey to the Cosmic Frontier (4th Ed., John D=
. Fix)
Solution manual Astronomy : Journey to the Cosmic Frontier (5th Ed., John D=
. Fix)
Solution manual Pathways to Astronomy with Starry Night Pro (Steven  Schnei=
der & Thomas T Arny)
Solution manual From Molecules to Networks (2nd Ed., John Byrne & James Rob=
erts)
Solution manual Biotechnology (David Clark & Nanette Pazdernik)
Solution manual Light and Video Microscopy (Randy Wayne)
Solution manual Mathematical Methods for Physicists : A Comprehensive Guide=
 (7th Ed., George Arfken, Hans Weber & Frank Harris)

List of Solutions Manuals and Test Banks
----

contact to :   mattosbw1@gmail.com   mattosbw1(a=
t)gmail.com

  =20

NOTE : "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Civil Engineering and Architecture :

Solution manual Mechanical and Structural Vibrations : Theory and Applicati=
ons (Jerry H. Ginsberg)
Solution manual Structural Analysis (4th Ed., Aslam Kassimali)
Solution manual Fundamentals of Structural Analysis (1st Ed., Leet & Uang)
Solution manual Fundamentals of Structural Analysis (2nd Ed., Leet & Uang)
Solution manual Fundamentals of Structural Analysis (3rd Ed., Leet, Uang & =
Gilbert)
Solution manual Fundamentals of Structural Analysis (4th Ed., Leet, Uang & =
Gilbert)
Solution manual A Structures Primer (Harry F. Kaufman)
Solution manual Steel Design (4th Ed., William T. Segui)
Solution manual Advanced Methods of Structural Analysis (Igor A. Karnovsky =
& Olga Lebed)
Solution manual Matrix Structural Analysis, With MASTAN2 (2nd Ed., William =
McGuire, Richard H. Gallagher, Ronald D. Ziemian)
Solution manual Structural and Stress Analysis (2nd Ed., Megson)
Solution manual Structural Steel Design ASD Method (4th Ed., Jack McCormac)
Solution manual Structural Steel Design (4th Ed., Jack McCormac)
Solution manual Structural Steel Design (5th Ed., Jack C. McCormac & Stephe=
n F. Csernak)
Solution manual Structural Steel Design : A Practice Oriented Approach (Abi=
 Aghayere & Jason Vigil)
Solution manual Unified Design of Steel Structures (1st Ed., Louis Geschwin=
dner)
Solution manual Unified Design of Steel Structures (2nd Ed., Louis Geschwin=
dner)
Solution manual Steel Structures : Behavior and LRFD (1st Ed., Ramulu Vinna=
kota)
Solution manual The Engineering of Foundations (1st Ed., Rodrigo Salgado)
Solution manual Construction Project Scheduling and Control (2nd Ed., Saleh=
 A. Mubarak)
Solution manual Introduction to Infrastructure : An Introduction to Civil a=
nd Environmental Engineering (Michael R. Penn, Philip J. Parker)=20
Solution manual Civil and Environmental Systems Engineering (2nd Ed., Charl=
es S. Revelle, Earl Whitlatch, Jeff Wright)
Solution manual Mechanics of Materials : A Modern Integration of Mechanics =
and Materials in Structural Design (Christopher Jenkins & Sanjeev Khanna)
Solution manual Analysis and Design of Shallow and Deep Foundations (Lymon =
Reese, William Isenhower & Shin-Tower Wang)=20
Solution manual Elementary Structures for Architects and Builders (5th Ed.,=
 Ronald Shaeffer)
Solution manual Building Structures (3rd Ed., James Ambrose & Patrick Tripe=
ny)
Solution manual Statics and Strength of Materials for Architecture and Buil=
ding Construction (3rd Ed., Onouye & Kane)
Solution manual Statics and Strength of Materials for Architecture and Buil=
ding Construction (4th Ed., Onouye & Kane)
Solution manual Finite Element Techniques in Structural Mechanics (C. T. F.=
 Ross)
Solution manual Fundamental Finite Element Analysis and Applications: with =
Mathematica and Matlab Computations (Asghar Bhatti)
Solution manual Advanced Topics in Finite Element Analysis of Structures : =

With Mathematica and MATLAB Computations (Asghar Bhatti)
Solution manual Adjustment Computations : Spatial Data Analysis (4th Ed., C=
harles Ghilani & Paul Wolf)
Solution manual Adjustment Computations : Spatial Data Analysis (5th Ed., C=
harles Ghilani)
Solution manual Surveying (5th Ed., Jack McCormac)
Solution manual Surveying (6th Ed., Jack McCormac, Wayne Sarasua, William =
Davis)
Solution manual Surveying with Construction Applications (6th Ed., Barry Ka=
vanagh)
Solution manual Surveying with Construction Applications (7th Ed., Barry Ka=
vanagh)
Solution manual Surveying : Principles and Applications (8th Ed., Barry Kav=
anagh)
Solution manual Surveying Fundamentals and Practices (5th Ed., Jerry Nathan=
son, Michael Lanzafama & Philip Kissam)
Solution manual Surveying Fundamentals and Practices (6th Ed., Jerry Nathan=
son, Michael Lanzafama & Philip Kissam)
Solution manual Structural Analysis (5th Ed., Hibbeler)
Solution manual Structural Analysis (7th Ed., Hibbeler)
Solution manual Structural Analysis - SI Units (7th Ed., Hibbeler)
Solution manual Structural Analysis (8th Ed., Hibbeler)
Solution manual Dynamics of Structures (3rd Ed., Chopra)
Solution manual Dynamics of Structures (4th Ed., Chopra)
Solution manual Designing with Geosynthetics (5th Ed., Robert M. Koerner)
Solution manual Geotechnical Earthquake Engineering (Steven L. Kramer)
Solution manual Principles of Geotechnical Engineering (6th Ed., Braja M. D=
as)=20
Solution manual An Introduction to Geotechnical Engineering (2nd Ed., Rober=
t D. Holtz, William D. Kovacs, Thomas C. Sheahan)
Solution manual Foundation Design : Principles and Practices (2nd Ed., Dona=
ld P. Coduto)
Solution manual Geotechnical Engineering: Principles and Practices (2nd Ed.=
, Donald P. Coduto, Man-chu Ronald Yeung & William A. Kitch)
Solution manual Geotechnical Engineering: Principles and Practices - Intern=
ational Version (2nd Ed., Donald P. Coduto, Man-chu Ronald Yeung & William =
A. Kitch)
Solution manual Fundamentals of Structural Stability (George Simitses & Dew=
ey Hodges)
Solution manual Fundamentals of Structural Mechanics (2nd Ed., keith D. Hje=
lmstad)
Solution Manual Structural Dynamics : Theory and Applications (Tedesco, McD=
ougal & Ross)
Solution manual Fundamentals of Structural Dynamics (2nd Ed., Roy Craig & A=
ndrew Kurdila)
Solution manual Concrete (2nd Ed., Sidney Mindess, J. Francis Young, David =
Darwin)=20
Solution manual Design of Concrete Structures (13th Ed., Nilson, Darwin & D=
olan)
Solution manual Design of Concrete Structures (14th Ed., Nilson, Darwin & D=
olan)
Solution manual Structures (6th Ed., Daniel Lewis Schodek & Martin Bechthol=
d)

Solution manual Concrete Structures (Mehdi Setareh & Robert Darvas)
Solution manual Reinforced Concrete Design : A Practical Approach (Brzev & =
Pao)
Solution manual Reinforced Concrete : A Fundamental Approach (6th Ed., Edwa=
rd Nawy)=20
Solution manual Prestressed Concrete : A Fundamental Approach - ACI, AASHTO=
, IBC 2009 Codes Version (5th Ed. Update, Edward Nawy)
Solution manual Reinforced Concrete Design (6th Ed., Chu-Kia Wang, Charles =
Salmon)
Solution manual Reinforced Concrete Design (7th Ed., Chu-Kia Wang, Charles =
Salmon & Jos=E9 Pincheira)
Solution manual Reinforced Concrete Design (6th Ed., George Limbrunner & Ab=
i Aghayere)
Solution manual Reinforced Concrete Design (7th Ed., George Limbrunner & Ab=
i Aghayere)
Solution manual Reinforced Concrete : Mechanics and Design (4th Ed., James =
MacGregor & James Wight)
Solution manual Reinforced Concrete : Mechanics and Design (5th Ed., James =
Wight & James MacGregor)=20
Solution manual Reinforced Concrete : Mechanics and Design - International =
Version (5th Ed., James Wight & James MacGregor)
Solution manual Reinforced Concrete : Mechanics and Design (6th Ed., James =
Wight & James MacGregor)
Solution manual Structural Concrete : Theory and Design (3rd Ed., M. Nadim =
Hassoun & Akthem Al-Manaseer)
Solution manual Structural Concrete : Theory and Design (4th Ed., M. Nadim =
Hassoun & Akthem Al-Manaseer)
Solution manual Design of Reinforced Concrete (6th Ed., Jack McCormac & Jam=
es Nelson)
Solution manual Design of Reinforced Concrete (7th Ed., ACI 318-05 Code Edi=
tion, by Jack McCormac)
Solution manual Design of Reinforced Concrete (8th Ed., Jack McCormac & Rus=
sell Brown)
Solution manual Structural Analysis : Using Classical and Matrix Methods (3=
rd Ed., James Nelson, Jr., Jack McCormac)
Solution manual Structural Analysis : Using Classical and Matrix Methods (4=
th Ed., Jack McCormac)
Solution manual Pavement Design and Materials (A. T. Papagiannakis, E. A. M=
asad)
Solution manual Pavement Analysis and Design (2nd Ed., Yang H. Huang)
Solution manual Traffic Engineering (4th Ed., Roger P. Roess, Elena S. Pras=
sas, William R. McShane)
Solution manual Traffic and Highway Engineering (3rd Ed., Nicholas Garber &=
 Lester Hoel)
Solution manual Principles of Highway Engineering and Traffic Analysis (3rd=
 Ed., Fred Mannering, Walter Kilareski & Scott Washburn)
Solution manual Principles of Highway Engineering and Traffic Analysis (4th=
 Ed., Fred Mannering, Walter Kilareski & Scott Washburn)
Solution manual Highway Engineering (7th Ed., Paul Wright & Karen Dixon)
Solution manual Soil Mechanics : Concepts and Applications (2nd Ed., Willia=
m Powrie)
Solution manual Unsaturated Soil Mechanics (Ning Lu & William Likos)
Solution manual Soil Mechanics and Foundations (2nd Ed., Muni Budhu)

```
Solution manual Soil Mechanics and Foundations (3rd Ed., Muni Budhu)
Solution manual Soils and Foundations - SI Units (6th Ed., Liu & Evett)
Solution manual Soils and Foundations (7th Ed., Liu & Evett)
Solution manual Fundamentals of Soil Mechanics for Sedimentary and Residual=
 Soils (Laurence Wesley)
Solution manual Essentials of Soil Mechanics and Foundations : Basic Geotec=
hnics (7th Ed., David McCarthy)
Solution manual Foundations and Earth Retaining Structures (Muniram Budhu)
Solution manual Design Analysis in Rock Mechanics (William G. Pariseau)
Solution manual Probability Concepts in Engineering : Emphasis on Applicati=
ons to Civil and Environmental Engineering (2nd Ed., Ang & Tang)
Solution manual Hydraulic Control Systems (Noah Manring)
Solution manual Open Channel Hydraulics (A. Osman Akan)
Solution manual Open Channel Hydraulics (1st Ed., Terry Sturm)
Solution manual Open Channel Hydraulics (2nd Ed., Terry Sturm)
Solution manual Open-Channel Flow (2nd Ed., M. Hanif Chaudhry)=20
Solution manual Frozen Ground Engineering (2nd Ed., Orlando Andersland & Br=
anko Ladanyi)
Solution manual Hydraulics in Civil and Environmental Engineering (4th Ed. =
Andrew Chadwick)
Solution manual Fundamentals of Hydraulic Engineering Systems (4th Ed., Rob=
ert Houghtalen, A. Osman Akan, Ned H. C. Hwang)
Solution manual Transportation Engineering : An Introduction (3rd Ed., C. J=
otin Khisty, B. Kent Lall)
Solution manual Introduction to Transportation Engineering (2nd Ed., Banks)
Solution manual Urban Transportation Planning (2nd Ed., Meyer & Miller)
Solution manual Transportation Engineering and Planning (3rd Ed., Papacosta=
s & Prevedouros)
Solution manual Transportation Engineering and Planning - SI Edition (3rd E=
d., Papacostas & Prevedouros)
Solution manual Structural Wood Design : A Practice-Oriented Approach (Abi =
Aghayere & Jason Vigil)
Solution manual Simplified Design of Wood Structures (6th Ed., James Ambros=
e & Patrick Tripeny)
Solution manual Simplified Design of Steel Structures (8th Ed., James Ambro=
se & Patrick Tripeny)
Solution manual Simplified Engineering for Architects and Builders (11th Ed=
., James Ambrose & Patrick Tripeny)
Solution manual Materials and Components of Interior Architecture (7th Ed.,=
 J. Rosemary Riggs)
Solution manual Olin's Construction : Principles, Materials, and Methods (8=
th Ed., H. Leslie Simmons)
Solution manual Basic Construction Materials (8th Ed., Theodore Marotta, Jo=
hn C. Coffey, Cynthia LaFleur-Brown & Christine LaPlante)
Solution manual Fundamentals of Residential Construction (2nd Ed., Edward A=
llen & Rob Thallon)
Solution manual Fundamentals of Building Construction : Materials and Metho=
ds (4th Ed., Edward Allen & Joseph Iano)
Solution manual Fundamentals of Building Construction : Materials and Metho=
ds (5th Ed., Edward Allen & Joseph Iano)
Solution manual Composites for Construction : Structural Design with FRP Ma=
terials (Lawrence Bank)
Solution manual Building Construction : Principles, Materials, and Systems =
```

(Madan Mehta, Diane Armpriest & Walter Scarborough)
Solution manual Construction Contracts (2nd Ed., Jimmie Hinze)
Solution manual Construction Contracts (3rd Ed., Jimmie Hinze)
Solution manual Construction Planning and Scheduling (3rd Ed., Jimmie W. Hi=
nze)
Solution manual Construction Planning and Scheduling (4th Ed., Jimmie W. Hi=
nze)
Solution manual Sustainable Construction and Design (Regina Leffers)
Solution manual Global Engineering and Construction (J. K. Yates)
Solution manual Construction Mathematics (Virdi & Baker)
Solution manual Materials for Civil and Construction Engineers (3rd Ed., Mi=
chael S. Mamlouk & John P. Zaniewski)
Solution manual Construction Management (3rd Ed., Daniel Halpin)
Solution manual Construction Management (4th Ed., Daniel Halpin & Bolivar S=
enior)
Solution manual Financial Management and Accounting Fundamentals for Constr=
uction (Daniel Halpin & Bolivar Senior)
Solution manual Construction Management Fundamentals (1st Ed., Schexnayder =
& Mayo)
Solution manual Construction Management Fundamentals (2nd Ed., Knutson, Sch=
exnayder, Fiori & Mayo)
Solution manual Construction Planning, Equipment, and Methods (6th Ed., Peu=
rifoy & Schexnayder)
Solution manual Construction Planning, Equipment, and Methods (7th Ed., Peu=
rifoy, Schexnayder & Shapira)
Solution manual Construction Planning, Equipment, and Methods (8th Ed., Peu=
rifoy, Schexnayder, Shapira & Schmitt)
Solution manual Construction Methods and Management (7th Ed., Stephens Nunn=
ally)
Solution manual Construction Methods and Management (8th Ed., Stephens Nunn=
ally)
Solution manual Construction Project Administration (8th Ed., Edward Fisk, =
Wayne Reynolds)
Solution manual Construction Project Administration (9th Ed., Edward Fisk, =
Wayne Reynolds)
Solution manual Construction Project Management (3rd Ed., Gould & Joyce)
Solution manual The Management of Construction : A Project Lifecycle Approa=
ch (F. Lawrence Bennett)
Solution manual Construction Accounting and Financial Management (1st Ed., =
Steven Peterson)
Solution manual Construction Accounting and Financial Management (2nd Ed., =
Steven Peterson)
Solution manual Principles and Practices of Commercial Construction (8th Ed=
., Cameron K. Andres & R.C. Smith)
Solution manual Construction Cost Analysis and Estimating (Phillip Ostwald)
Solution manual Cost Analysis and Estimating for Engineering and Management=
 (Phillip Ostwald & Timothy McLaren)
Solution manual Construction Estimating Using Excel (Stephen J. Peterson)
Solution manual Heating, Ventilation, and Air Conditioning in Buildings (1s=
t Ed., John W. Mitchell, James E. Braun)
Solution manual Heating and Cooling of Buildings : Design for Efficiency (2=
nd Ed., Jan Kreider, Peter Curtiss & Ari Rabl)
Solution manual Heating, Cooling, Lighting : Sustainable Design Methods for=

```
 Architects (3rd Ed., Norbert Lechner)
Solution manual Mechanical and Electrical Systems in Architecture, Engineer=
ing and Construction (5th Ed., Frank R. Dagostino & Joseph B. Wujek)
Solution manual Mechanical and Electrical Equipment for Buildings (10th Ed.=
, Stein, Reynolds, Grondzik, Kwok)
Solution manual Mechanical and Electrical Equipment for Buildings (11th Ed.=
, Grondzik, Kwok, Stein & Reynolds)
Solution manual Mechanical & Electrical Systems in Buildings (4th Ed., Rich=
ard Janis & William Tao)
Solution manual Introduction to Naval Architecture : Formerly Muckle's Nava=
l Architecture for Marine Engineers (4th Ed., E.C. Tupper)
Solution manual Architectural Drawing and Light Construction (8th Ed., Phil=
ip A. Grau, III & Edward J. Muller)
Solution manual NEW Autodesk Civil 3D : Procedures & Applications (Harry O.=
 Ward)
Solution manual Structural Health Monitoring with Piezoelectric Wafer Activ=
e Sensors (Victor Giurgiutiu)
Solution manual Architecture Design Notebook (2nd Ed., Peter Fawcett)
Solution manual Civil Drafting Technology (7th Ed., David A. Madsen, Terenc=
e M. Shumaker & David P. Madsen)
Solution manual Introduction to Homeland Security (2nd Ed., Bullock & Georg=
e Haddow)

- Environmental Engineering, Earth and Environmental Sciences :

Solution manual Principles of Environmental Engineering and Science (1st Ed., Mackenzie Davis & Susan Masten)
Solution manual Principles of Environmental Engineering and Science (2nd Ed., Mackenzie Davis & Susan Masten)
Solution manual Introduction to Environmental Engineering (Richard Mines & Laura Lackey)
Solution manual Introduction to Environmental Engineering (4th Ed., MacKenzie Davis & David Cornwell)
Solution manual Introduction to Environmental Engineering (5th Ed., MacKenzie Davis & David Cornwell)
Solution manual Introduction to Environmental Engineering and Science (2nd Ed., Gilbert Masters)
Solution manual Introduction to Environmental Engineering and Science (3rd Ed., Gilbert Masters & Wendell Ela)
Solution manual Thermal Environmental Engineering (3rd Ed., Thomas H. Kuehn, James W. Ramsey, James L. Threlkeld)
Solution manual Solar Energy Engineering (Soteris Kalogirou)
Solution manual Environmental Science and Engineering (2nd Ed., J. Glynn Henry, Gary W. Heinke)
Solution manual Solar Engineering of Thermal Processes (2nd Ed., John Duffie & William Beckman)
Solution manual Solar Engineering of Thermal Processes (3rd Ed., John Duffie & William Beckman)
Solution manual Energy Technology and Directions for the Future (Fanchi)
Solution manual Civil and Environmental Systems Engineering (2nd Ed., Charles S. Revelle, Earl Whitlatch, Jeff Wright)
Solution manual Environmental Engineering : Fundamentals, Sustainability, Design (James Mihelcic, Julie Zimmerman)
Solution manual Environmental Engineering Science (Nazaroff & Alvarez - Cohen)
Solution manual Environmental Engineering (4th Ed., Ruth Weiner & Robin Matthews)
Solution manual Environmental Pollution and Control (4th Ed., Peirce, Vesilind & Weiner)
Solution manual Introduction to Engineering and the Environment (1st Ed., Edward Rubin)
Solution manual Basic Environmental Technology : Water Supply, Waste Management & Pollution Control (5th Ed., Jerry Nathanson)
Solution manual Water and Wastewater Technology - SI Units (5th Ed., Mark J. Hammer, Sr. & Mark Hammer, Jr.)
Solution manual Water and Wastewater Technology (6th Ed., Mark J. Hammer, Sr. & Mark Hammer, Jr.)
Solution manual Water and Wastewater Technology (7th Ed., Mark J. Hammer, Sr. & Mark Hammer, Jr.)
Solution manual Water and Wastewater Engineering (Mackenzie L. Davis)
Solution manual Water and Wastewater Engineering : Water Supply and Wastewater Removal (3rd Ed., Nazih K. Shammas & Lawrence K. Wang)
Solution manual Water Supply and Pollution Control (8th Ed., Viessman Jr., Hammer, Perez & Chadik)
Solution manual Water Supply and Pollution Control - International Version (8th Ed., Viessman Jr., Hammer, Perez & Chadik)
Solution manual Water Treatment : Principles and Design (2nd Ed., by MWH)

Solution manual Water Resources Engineering (Ralph A. Wurbs & Wesley P. James)
Solution manual Ground and Surface Water Hydrology (Larry W. Mays)
Solution manual Water Resources Engineering 2005 Edition (Larry W. Mays)
Solution manual Water Resources Engineering (2nd Ed., Larry W. Mays)
Solution manual Water Resources Engineering (2nd Ed., Chin)
Solution manual Water Chemistry (Benjamin)
Solution manual Aquatic Pollution : An Introductory Text (3rd Ed., Edward A. Laws)
Solution manual Plant Pathology (5th Ed., George Agrios)
Solution manual Radiation Detection and Measurement (3rd Ed., Glenn Knoll)
Solution manual Radiation Detection and Measurement (4th Ed., Glenn Knoll)
Solution manual Principles of Sequence Stratigraphy (Octavian Catuneanu)
Solution manual The Earth's Ionosphere : Plasma Physics & Electrodynamics (2nd Ed., Michael Kelley)
Solution manual Atmosphere, Ocean and Climate Dynamics : An Introductory Text (Marshall & Plumb)
Solution manual Atmospheric Science : An Introductory Survey (2nd Ed., John Wallace, Peter Hobbs)
Solution manual Environmental Issues : An Introduction to Sustainability (3rd Ed., McConnell & Abel)
Solution manual Environmental Science : Toward A Sustainable Future (10th Ed., Wright & Nebel)
Solution manual Hazard City : Assignments in Applied Geology (3rd Ed., King, Carpenter & Wilson)
Solution manual Introduction to Environmental Geology (4th ERd., Edward Keller)
Solution manual The Science of Grapevines : Anatomy and Physiology (Markus Keller)
Solution manual Geoenvironmental Engineering : Site Remediation, Waste Containment, and Emerging Waste Management Technologies (Hari Sharma & Krishna Reddy)
Solution manual Natural Hazards : Earth's Processes as Hazards, Disasters and Catastrophes (2nd Ed., Keller & Blodgett)
Solution manual Essentials of Oceanography (9th Ed., Trujillo & Thurman)
Solution manual Exercises for Weather and Climate (6th Ed., Greg Carbone)
Solution manual Fundamentals of Ground Water (Franklin Schwartz & Hubao Zhang)
Solution manual Practical Problems in Groundwater Hydrology (Scott Bair & Terry Lahm)
Solution manual Groundwater Hydrology (3rd Ed., David Keith Todd & Larry Mays)
Solution manual Groundwater Science (Charles Fitts)
Solution manual Frozen Ground Engineering (2nd Ed., Orlando Andersland & Branko Ladanyi)
Solution manual Stormwater Management for Land Development : Methods and Calculations for Quantity Control (Thomas A. Seybert)
Solution manual Urban Hydrology, Hydraulics, and Stormwater Quality : Engineering Applications and Computer Modeling (A. Osman Akan & Houghtalen)
Solution manual Hydraulics in Civil and Environmental Engineering (4th Ed. Andrew Chadwick)
Solution manual Hydrologic Analysis and Design (3rd Ed., Richard H. McCuen)
Solution manual Introduction to Hydrology (5th Ed., Warren Viessman, Jr. , Gary L. Lewis)
Solution manual Fundamentals of Hydraulic Engineering Systems (4th Ed., Robert Houghtalen, A. Osman Akan, Ned H. C. Hwang)
Solution manual Agriculture's Ethical Horizon (Robert Zimdahl)
Solution manual Environmental Contaminants : Assessment and Control (Daniel Vallero)

Solution manual A Problem-Solving Approach to Aquatic Chemistry (James Jensen)
Solution manual Hazardous Waste Management (2nd Ed., Michael LaGrega, Phillip Buckingham & Jeffrey Evans)
Solution manual Environmental Biotechnology : Principles and Applications (1st Ed., Bruce Rittmann & Perry McCarty)
Solution manual Chemistry for Environmental Engineering and Science (5th Ed., Clair Sawyer, Perry McCarty & Gene Parkin)
Solution manual Geology for Engineers and Environmental Scientists (3rd Ed., Alan Kehew)
Solution manual Ocean Waves and Oscillating Systems (Johannes Falnes)
Solution manual Radiation Detection and Measurement (3rd Ed., Glenn Knoll)
Solution manual Probability Concepts in Engineering : Emphasis on Applications to Civil and Environmental Engineering (2nd Ed., Ang & Tang)
Solution manual Hydrology : Water Quantity and Quality Control (2nd Ed., Wanielista, Kersten & Eaglin)
Solution manual Hydrology and Floodplain Analysis (4th Ed., Philip Bedient, Wayne Huber & Baxter Vieux)
Solution manual Hydrology : An Introduction (Brutsaert)
Solution manual Applied Atmospheric Dynamics (Amanda H. Lynch & John J. Cassano)
Solution manual Mid-Latitude Atmospheric Dynamics : A First Course (Jonathan E. Martin)
Solution manual Adjustment Computations : Spatial Data Analysis (4th Ed., Charles Ghilani & Paul Wolf)
Solution manual Adjustment Computations : Spatial Data Analysis (5th Ed., Charles Ghilani)
Solution manual Ecology (4th Ed., Manuel C. Molles)
Solution manual Industrial Ecology and Sustainable Engineering (T. E. Graedel & Braden R. Allenby)
Solution manual Principles of Environmental Science : Inquiry and Applications (4th Ed., Cunningham)
Solution manual Principles of Environmental Science : Inquiry and Applications (5th Ed., Cunningham)
Solution manual Environmental Science : A Global Concern (9th Ed., Cunningham)
Solution manual Environmental Science : A Global Concern (10th Ed., Cunningham)
Solution manual Essential Environmental Science (1st Ed., Edward Keller & Daniel Botkin)
Solution manual Environmental Science : Earth as a Living Planet (6th Ed., Daniel Botkin & Edward Keller)
Solution manual Environmental Science : Earth as a Living Planet (7th Ed., Daniel Botkin & Edward Keller)
Solution manual Environmental Science : Earth as a Living Planet, Canadian Edition (Daniel Botkin & Edward Keller & Isobel Heathcote)
Solution manual Introduction to Marine Biogeochemistry (2nd Ed., Susan Libes)
Solution manual Farm Management (5th Ed., Ronald Kay, William Edwards & Patricia Duffy)
Solution manual Farm Management (6th Ed., Ronald Kay, William Edwards & Patricia Duffy)
Solution manual Environmental Geology (6th Ed., Carla Montgomery)
Solution manual Environmental Geology (7th Ed., Carla Montgomery)
Solution manual Environmental Geology (8th Ed., Carla Montgomery)
Solution manual Environmental Geology (9th Ed., Carla Montgomery)
Solution manual Natural Disasters (4th Ed., Patrick Abbott)
Solution manual Natural Disasters (5th Ed., Patrick Abbott)

Solution manual Natural Disasters (6th Ed., Patrick Abbott)
Solution manual Natural Disasters (7th Ed., Patrick Abbott)
Solution manual Natural Disasters (8th Ed., Patrick Abbott)
Solution manual Geography Information Systems (2nd Ed., Kang-tsung Chang)
Solution manual Meteorology (2nd Ed., Danielson et al.)
Solution manual Fundamentals of Oceanography (4th Ed., Duxbury, Sverdrup)
Solution manual Fundamentals of Oceanography (5th Ed., Duxbury, Sverdrup)
Solution manual Introduction to Geography (8th Ed., Getis et al.)
Solution manual Introduction to Geography (9th Ed., Getis et al.)
Solution manual Introduction to Geography (10th Ed., Getis et al.)
Solution manual Introduction to Geography (11th Ed., Getis et al.)
Solution manual Physical Geology : The Earth Revealed (4th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology : The Earth Revealed (6th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology : Earth Revealed (7th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology (9th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology (10th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology (11th Ed., Plummer, McGeary & Carlson)
Solution manual Physical Geology (12th Ed., Plummer, McGeary & Carlson)
Solution manual Exploring the World Ocean (W. Sean Chamberlin & Tommy Dickey)
Solution manual Mastering ArcGIS (3rd Ed., Maribeth Price)
Solution manual Mastering ArcGIS (4th Ed., Maribeth Price)
Solution manual An Introduction to the World's Oceans (7th Ed., Sverdrup et al.)
Solution manual An Introduction to the Worlds Oceans (8th Ed., Sverdrup et al.)
Solution manual An Introduction to the Worlds Oceans (9th Ed., Sverdrup & Armbrust)
Solution manual An Introduction to the Worlds Oceans (10th Ed., Sverdrup & Armbrust)
Solution manual Laboratory Studies in Earth History (8th Ed., Brice et al.)
Solution manual Laboratory Studies in Earth History (9th Ed., Brice et al.)
Solution manual Exploring Geology (1st Ed., Reynolds et al.)
Solution manual Manual of Mineral Science (23rd Ed., Cornelis Klein & Barbara Dutrow)
Solution manual Isotopes : Principles and Applications (3rd Ed., Gunter Faure & Teresa Mensing)
Solution manual Earth Science : Understanding Environmental Systems (Edgar Spencer)
Solution manual Fundamentals of Weed Science (3rd Ed., Robert Zimdahl)
Solution manual Field and Laboratory Exercises in Animal Behavior (Tillberg, Breed & Hinners)
Solution manual Soils : An Introduction (6th Ed., Michael Singer & Donald Munns)
Solution manual Soils, Land, and Life (Stan Buol)
Solution manual Soils in Our Environment (10th Ed., Raymond Miller & Duane Gardiner)
Solution manual Soils in Our Environment (11th Ed., Raymond Miller & Duane Gardiner)
Solution manual Soil Microbiology, Ecology and Biochemistry (3rd Ed., Eldor Paul)
Solution manual Soil in the Environment : Crucible of Terrestrial Life (Daniel Hillel)
Solution manual Design Analysis in Rock Mechanics (William G. Pariseau)
Solution manual Forest Management and Planning (Bettinger, Boston, Siry & Grebner)

Solution manual Agricultural Systems : Agroecology and Rural Innovation for Development (Sieglinde Snapp & Barry Pound)
Solution manual Plant Systematics (Michael Simpson)
Solution manual The Nature and Properties of Soils (14th Ed., Nyle Brady & Raymond Weil)
Solution manual Elements of the Nature and Properties of Soils (2nd Ed., Nyle Brady & Ray Weil)
Solution manual Materials and the Environment : Eco-informed Material Choice (Michael Ashby)
Solution manual Materials and the Environment : Eco-informed Material Choice (2nd Ed., Michael Ashby)

List of Solutions Manuals and Test Banks=20
----

contact to :   mattosbw1@gmail.com   mattosbw1(at)g=
mail.com

=20

NOTE : "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Mechanics, Mechanical Engineering & Aerospace Engineering:

Solution Manual Classical Mechanics (Douglas Gregory)=20
Solution Manual Classical Mechanics : From Newton to Einstein : A Modern In=
troduction (2nd Ed., Martin McCall)=20
Solution Manual Advanced Dynamics (Donald T. Greenwood)
Solution Manual Principles of Dynamics (2nd Ed., Donald T. Greenwood)
Solution Manual Advanced Engineering Dynamics (2nd Ed., Jerry Ginsberg)
Solution Manual Classical Dynamics (Jorge V. Jos=E9)=20
Solution Manual Impact Mechanics (W.J. Stronge)
Solution Manual Human Body Dynamics (Aydin Tozeren)
Solution Manual Statistical Mechanics (2nd Ed., R.K. Pathria)
Solution Manual Statistical Mechanics (3rd Ed., R.K. Pathria & Paul D. Beal=
e)
Solution Manual Engineering Mechanics of Solids (2nd Ed., Egor P. Popov)
Solution Manual Introduction to Continuum Mechanics (4th Ed., W. Michael La=

i, David Rubin & Erhard Krempl)
Solution Manual Analytical Mechanics (7th Ed., Grant R. Fowles, George Cass=
iday)
Solution Manual Introduction to Mechanical Engineering (Rizza)
Solution Manual Engineering Fundamentals and Problem Solving (4th Ed., Eide=
, Jenison, Mashaw & Northup)
Solution Manual Engineering Fundamentals and Problem Solving (5th Ed., Eide=
, Jenison, Northup & Mickelson)
Solution Manual Engineering Fundamentals and Problem Solving (6th Ed., Eide=
, Jenison, Northup & Mickelson)
Solution Manual Mechanical Engineering Principles (Bird & Ross)=20
Solution Manual Dynamics of Mechanical Systems (C.T.F. Ross)
Solution Manual Mechanics of Solids (C.T.F. Ross)
Solution Manual Introduction to Engineering Analysis (1st Ed., Hagen)
Solution Manual Introduction to Engineering Analysis (2nd Ed., Hagen)
Solution Manual Introduction to Engineering Analysis (3rd Ed., Hagen)
Solution Manual Engineering Design (Rudolph J. Eggert)
Solution Manual Creative Design of Products and Systems (Saeed Niku)
Solution Manual Fundamentals of Engineering Design (2nd Ed., Barry Hyman)
Solution Manual Engineering Design (4th Ed., George Dieter & Linda Schmidt)
Solution Manual Engineering Design (5th Ed., George Dieter & Linda Schmidt)
Solution Manual Engineering Design and Graphics with Autodesk Inventor 2009=
 (James Bethune)
Solution Manual Engineering Design : A Project-Based Introduction (2nd Ed.,=
 Clive Dym & Patrick Little)=20
Solution Manual Engineering Design : A Project-Based Introduction (3rd Ed.,=
 Clive Dym & Patrick Little)=20
Solution Manual Tools and Tactics of Design (Dominick, Demel, Lawbaugh, Fre=
uler, Kinzel & Fromm)
Solution Manual Biofluid Mechanics - An Introduction to Fluid Mechanics, Ma=
crocirculation, and Microcirculation (David Rubenstein, Wei Yin & Mary Fram=
e)
Solution Manual Advanced Fluid Mechanics (William Graebel)=20
Solution manual Modern Fluid Dynamics (Clement Kleinstreuer)
Solution manual Essential Computational Fluid Dynamics (Oleg Zikanov)
Solution Manual Computational Fluid Dynamics : A Practical Approach (Jiyuan=
 Tu, Guan Heng Yeoh & Chaoqun Liu)
Solution Manual Mechanics of Fluids (8th Ed., Massey)=20
Solution Manual Fluid Mechanics (5th Ed., Frank White)=20
Solution Manual Fluid Mechanics (6th Ed., Frank White)
Solution Manual Fluid Mechanics (7th Ed., Frank White)
Solution Manual Viscous Fluid Flow (3rd Ed., Frank White)=20
Solution Manual Statistical Thermodynamics (Normand Laurendeau)
Solution Manual Introductory Statistical Thermodynamics (Nils Dalarsson , M=
ariana Dalarsson & Leonardo Golubovic)
Solution Manual Thermodynamics and Heat Power (6th Ed., Kurt C. Rolle)
Solution Manual Modern Engineering Thermodynamics (Robert Balmer)
Solution Manual Introduction to the Thermodynamics of Materials (4th Ed. Da=
vid Gaskell)
Solution Manual Introduction to Thermodynamics and Heat Transfer (2nd Ed., =
Yunus Cengel)
Solution Manual Thermal Design : Heat Sinks, Thermoelectrics, Heat Pipes, C=
ompact Heat Exchangers, and Solar Cells (HoSung Lee)

Solution Manual Fundamentals of Thermal-Fluid Sciences (1st Ed., Yunus Ceng=
el)=20
Solution Manual Fundamentals of Thermal-Fluid Sciences (2nd Ed., Yunus Ceng=
el)
Solution Manual Fundamentals of Thermal-Fluid Sciences (3rd Ed., Yunus Ceng=
el & Robert Turner)
Solution Manual Fundamentals of Thermal-Fluid Sciences (4th Ed., Yunus Ceng=
el , Robert Turner & John Cimbala)
Solution Manual Thermodynamics : An Engineering Approach (5th Ed., Yunus Ce=
ngel)=20
Solution Manual Thermodynamics : An Engineering Approach (6th Ed., Yunus Ce=
ngel & Michael Boles)=20
Solution Manual Thermodynamics : An Engineering Approach (7th Ed., Yunus Ce=
ngel & Michael Boles)
Solution Manual Essentials of Fluid Mechanics : Fundamentals and Applicatio=
ns (1st Ed., Yunus Cengel, John Cimbala) =20
Solution Manual Fluid Mechanics (1st Ed., Yunus Cengel & John Cimbala)=20
Solution Manual Fluid Mechanics (2nd Ed., Yunus Cengel & John Cimbala)=20
Solution Manual Heat Tranfer (2nd Ed., Yunus Cengel)=20
Solution Manual Heat and Mass Transfer : A Practical Approach (3rd Ed., Yun=
us Cengel)=20
Solution Manual Heat and Mass Transfer : Fundamentals and Applications (4th=
 Ed., Yunus Cengel & Afshin Ghajar)
Solution Manual Introduction to Fluid Mechanics (6th Ed., Robert Fox, Alan =
McDonald & Philip Pritchard)
Solution Manual Introduction to Fluid Mechanics (7th Ed., Robert Fox, Phili=
p Pritchard & Alan McDonald)
Solution Manual Fox and McDonald's Introduction to Fluid Mechanics (8th Ed.=
, Philip Pritchard)
Solution Manual Fluid Mechanics (5th Ed., Douglas)
Solution Manual Fluid Mechanics (3rd Ed., Kundu & Cohen)=20
Solution Manual Fluid Mechanics (4th Ed., Kundu & Cohen)=20
Solution Manual Fluid Mechanics (5th Ed., Kundu , Cohen & Dowling)
Solution Manual Elementary Fluid Mechanics (7th Ed., Street, Watters & Venn=
ard)
Solution Manual Fluid Mechanics with Engineering Applications (10th Ed., Fi=
nnemore & Franzini)=20
Solution Manual Fundamentals of Fluid Mechanics (4th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi)=20
Solution Manual Fundamentals of Fluid Mechanics (5th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi)
Solution Manual Fundamentals of Fluid Mechanics (6th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi, Wade Huebsch)
Solution Manual Fundamentals of Fluid Mechanics - SI Units (6th Ed., Bruce =
Munson, Donald Young, Theodore Okiishi, Wade Huebsch)
Solution Manual Fundamentals of Fluid Mechanics (7th Ed., Bruce Munson, The=
odore Okiishi, Wade Huebsch, Alric Rothmayer)
Solution Manual A Brief Introduction to Fluid Mechanics (3rd Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi)
Solution Manual A Brief Introduction to Fluid Mechanics (4th Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi, Wade Huebsch)
Solution Manual A Brief Introduction to Fluid Mechanics (5th Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi, Wade Huebsch)

Solution Manual Engineering Fluid Mechanics (7th Ed., Clayton Crowe, Donald=
 Elger, John Roberson)
Solution Manual Engineering Fluid Mechanics (8th Ed., Clayton Crowe, Donald=
 Elger, John Roberson)
Solution Manual Engineering Fluid Mechanics (9th Ed., Clayton Crowe, Donald=
 Elger, John Roberson, Barbara Williams)
Solution Manual Engineering Fluid Mechanics - SI Version (9th Ed., Clayton =
Crowe, Donald Elger, John Roberson, Barbara Williams)
Solution Manual Fluid Mechanics (Potter & Foss)
Solution Manual Mechanics of Fluids (3rd Ed., Potter)
Solution Manual Fluid Power with Applications (7th Ed., Esposito)
Solution Manual Mechanics of Fluids (4th Ed., Shames)
Solution Manual Applied Fluid Mechanics (6th Ed., Mott) =20
Solution Manual Applied Fluid Mechanics - SI Units (6th Ed., Mott) =20
Solution Manual Hydraulic Control Systems (Noah Manring)
Solution Manual Fluid Mechanics and Thermodynamics of Turbomachinery (5th E=
d., S.L. Dixon)=20
Solution Manual Fluid Mechanics and Thermodynamics of Turbomachinery (6th E=
d., S.L. Dixon & Cesare Hall)
Solution Manual The Design of High-Efficiency Turbomachinery and Gas Turbin=
es (2nd Ed., David Gordon Wilson & Theododios Korakianitis)
Solution Manual Fundamentals of Turbomachinery (William Peng)
Solution Manual Principles of Turbomachinery in Air-Breathing Engines (Bask=
harone)
Solution Manual Theory of Aerospace Propulsion (Pasquale Sforza)
Solution Manual Fundamentals of Jet Propulsion with Applications (Ronald D.=
 Flack)
Solution Manual Extended Irreversible Thermodynamics (3rd Ed., D. Jou, J. C=
asas-Vazquez & G. Lebon)
Solution Manual Thermodynamics : An Integrated Learning System (Schmidt, Ez=
ekoye, Howell & Baker)
Solution Manual Design of Fluid Thermal Systems (2nd Ed., William Janna)
Solution Manual Design and Simulation of Thermal Systems (N.V. Suryanarayan=
a & Oner Arici)
Solution Manual Introduction to Thermal and Fluids Engineering (Kaminski & =
Jensen)
Solution Manual Heating, Ventilating and Air Conditioning Analysis and Desi=
gn (6th Ed., McQuiston)
Solution Manual Heating, Ventilation, and Air Conditioning in Buildings (1s=
t Ed., John W. Mitchell, James E. Braun)
Solution manual Heating and Cooling of Buildings : Design for Efficiency (2=
nd Ed., Jan Kreider, Peter Curtiss & Ari Rabl)
Solution Manual Electricity, Electronics, and Control Systems for HVAC (4th=
 Ed., Thomas Kissell)
Solution Manual Heat and Mass Transfer (Anthony Mills)
Solution Manual Heat Transfer (2nd Ed., A.F. Mills)
Solution Manual Basic Heat and Mass Transfer (2nd Ed., A.F. Mills)
Solution Manual Convective Heat and Mass Transfer (4th Ed., Kays & Crawford=
)
Solution Manual Advanced Engineering Thermodynamics (3rd Ed., Bejan)
Solution Manual Convection Heat Transfer (3rd Ed., Bejan)
Solution Manual Design with Constructal Theory (Adrian Bejan & Sylvie Loren=
te)

Solution Manual Shape and Structure, from Engineering to Nature (Adrian Bej=
an)
Solution Manual Thermodynamics : Concepts and Applications (Stephen Turns)=
=20
Solution Manual Experimental Methods for Engineers (8th Ed., Jack P. Holman=
)
Solution Manual Heat Transfer (10th Ed., Jack Holman)
Solution Manual Principles of Heat Transfer (Kaviany)
Solution Manual Heat Convection (Latif M. Jiji)
Solution Manual Fundamentals of Momentum, Heat and Mass Transfer (5th Ed., =
Welty)
Solution Manual Analytical Methods for Heat Transfer and Fluid Flow Problem=
s (Bernhard Weigand)
Solution Manual An Introduction to Fluid Dynamics : Principles of Analysis =
and Design (Stanley Middleman)
Solution Manual An Introduction to Mass and Heat Transfer : Principles of A=
nalysis and Design (Stanley Middleman)
Solution Manual Fundamentals of Thermodynamics (5th Ed., Richard Sonntag, C=
laus Borgnakke & Gordon Van Wylen)
Solution Manual Fundamentals of Thermodynamics (6th Ed., Richard Sonntag, C=
laus Borgnakke & Gordon Van Wylen)
Solution Manual Fundamentals of Thermodynamics (7th Ed., Claus Borgnakke & =
Richard Sonntag)
Solution Manual Introduction to Engineering Thermodynamics (1st Ed., Richar=
d Sonntag & Claus Borgnakke)
Solution Manual Introduction to Engineering Thermodynamics (2nd Ed., Richar=
d Sonntag & Claus Borgnakke)
Solution Manual Fundamentals of Engineering Thermodynamics (5th Ed., Michae=
l Moran, Howard Shapiro)=20
Solution Manual Fundamentals of Engineering Thermodynamics (6th Ed., Michae=
l Moran, Howard Shapiro)
Solution Manual Fundamentals of Engineering Thermodynamics - SI Units (6th =
Ed., Michael Moran, Howard Shapiro)
Solution Manual Fundamentals of Engineering Thermodynamics (7th Ed., Michae=
l Moran, Howard Shapiro, Daisie Boettner, Margaret Bailey)
Solution Manual Fundamentals of Heat and Mass Transfer (5th Ed., Incropera,=
 DeWitt, Bergman, Lavine)
Solution Manual Fundamentals of Heat and Mass Transfer (6th Ed., Incropera,=
 DeWitt, Bergman, Lavine)
Solution Manual Fundamentals of Heat and Mass Transfer (7th Ed., Incropera,=
 DeWitt, Bergman, Lavine)
Solution Manual Introduction to Heat Transfer (4th Ed., Incropera, DeWitt)
Solution Manual Introduction to Heat Transfer (5th Ed., Incropera, DeWitt, =
Bergman, Lavine)
Solution Manual Introduction to Heat Transfer (6th Ed., Incropera, DeWitt, =
Bergman, Lavine)
Solution Manual Radiation Detection and Measurement (3rd Ed., Glenn Knoll)
Solution Manual Radiation Detection and Measurement (4th Ed., Glenn Knoll)
Solution Manual Radiative Heat Transfer (2nd Ed., Michael Modest)
Solution Manual Principles of Combustion (2nd Ed., Kenneth Kuan-yun Kuo)
Solution Manual An Introduction to Combustion : Concepts and Applications (=
3rd Ed., Stephen R. Turns)
Solution Manual Combustion (2nd Ed., Irvin Glassman)

Solution Manual Combustion (3rd Ed., Irvin Glassman)
Solution Manual Combustion (4th Ed., Irvin Glassman)
Solution Manual Incompressible Flow (3rd Ed., Panton)
Solution Manual Modern Compressible Flow : With Historical Perspective (3rd=
 Ed., John Anderson)=20
Solution Manual Non-Newtonian Flow : Fundamentals and Engineering Applicati=
ons (R.P. Chhabra & J F Richardson)
Solution Manual Computational Techniques for Fluid Dynamics (Srinivas, K., =
Fletcher, C.A.J.)=20
Solution Manual Introduction to Computational Fluid Dynamics (A.W. Date)=20
Solution Manual Robot Modeling and Control (Spong, Hutchinson & Vidyasagar)
Solution Manual Introduction to Robotics : Mechanics and Control (3rd Ed., =
John J. Craig)
Solution Manual Introduction to Robotics: Analysis, Control, Applications (=
2nd Ed., Saeed B. Niku)
Solution Manual Theory of Applied Robotics : Kinematics, Dynamics and Contr=
ol (Reza N. Jazar)
Solution Manual Control of Robot Manipulators in Joint Space (R. Kelly, V. =
Santib=E1=F1ez, A. Lor=EDa)
Solution Manual Modelling and Control of Robot Manipulators (2nd Ed., Loren=
zo Sciavicco, Bruno Siciliano)=20
Solution Manual Robotics : Modelling, Planning and Control (Bruno Siciliano=
, Lorenzo Sciavicco, Luigi Villani & Giuseppe Oriolo)
Solution Manual Fundamentals of Robotic Mechanical Systems : Theory, Method=
s, and Algorithms (3rd Ed., Jorge Angeles)
Solution Manual Kinematic Chains and Machine Components Design (Dan B. Marg=
hitu)=20
Solution Manual Kinematics, Dynamics, and Design of Machinery (2nd Ed., Wal=
dron & Kinzel)=20
Solution Manual Kinematics and Dynamics of Machinery (3rd Ed., Charles E. W=
ilson & J. Peter Sadler)
Solution Manual Kinematics and Dynamics of Machinery - SI Units (3rd Ed., C=
harles E. Wilson & J. Peter Sadler)
Solution Manual Machines and Mechanisms : Applied Kinematic Analysis (3rd E=
d., David H. Myszka) =20
Solution Manual Machines and Mechanisms : Applied Kinematic Analysis (4th E=
d., David H. Myszka)
Solution Manual Mechanism Design : Analysis and Synthesis (4th Ed., Erdman,=
 Sandor & Kota)
Solution Manual Mechanical Design : A Components Approach (2nd Ed., Peter C=
hilds)
Solution Manual Mechanical Design of Machine Elements and Machines : A Fail=
ure Prevention Perspective (1st Ed., Collins)=20
Solution Manual Mechanical Design of Machine Elements and Machines : A Fail=
ure Prevention Perspective (2nd Ed., Collins, Busby & Staab)=20
Solution Manual Fundamentals of Machine Component Design (3rd Ed., Juvinall=
)
Solution Manual Fundamentals of Machine Component Design (4th Ed., Juvinall=
 & Marshek)
Solution Manual Fundamentals of Machine Component Design (5th Ed., Juvinall=
 & Marshek)
Solution Manual Design of Machine Elements (8th Ed., Spotts)
Solution Manual Machine Elements in Mechanical Design (4th Ed., Mott)

Solution Manual Machine Elements in Mechanical Design - SI Units (4th Ed., =
Mott)
Solution Manual Mechanical Design : An Integrated Approach (1st Ed., Ansel =
Ugural)
Solution Manual Design of Machinery (3rd Ed., Norton)
Solution Manual Design of Machinery (4th Ed., Norton)
Solution Manual Design of Machinery (5th Ed., Norton)
Solution Manual Machine Design : An Integrated Approach (3rd Ed., Norton)
Solution Manual Machine Design : An Integrated Approach (4th Ed., Norton)
Solution Manual Mechanical Engineering Design (6th Ed., Shigley)
Solution Manual Mechanical Engineering Design (7th Ed., Shigley, Mischke & =
Budynas)
Solution Manual Shigley's Mechanical Engineering Design (8th Ed., Budynas &=
 Nisbett)
Solution Manual Shigley's Mechanical Engineering Design (9th Ed., Budynas &=
 Nisbett)
Solution Manual Fundamentals of Machine Elements (1st Ed., Hamrock)
Solution Manual Fundamentals of Machine Elements (2nd Ed., Hamrock)
Solution Manual Mechanics of Materials (Paul S. Steif)
Solution Manual Mechanics of Materials : A Modern Integration of Mechanics =
and Materials in Structural Design (Christopher Jenkins & Sanjeev Khanna)
Solution Manual Mechanics of Materials (3th Ed., Beer)
Solution Manual Mechanics of Materials (5th Ed., Gere & Timoshenko)
Solution Manual Mechanics of Materials (6th Ed., Gere & Timoshenko)
Solution Manual Mechanics of Materials (7th Ed., Gere & Goodno)
Solution Manual Mechanics of Materials (Ansel Ugural)
Solution Manual Mechanics of Materials : An Integrated Learning System (1st=
 Ed., Timothy Philpot)
Solution Manual Mechanics of Materials : An Integrated Learning System (2nd=
 Ed., Timothy Philpot)
Solution Manual Mechanics of Materials (2nd Ed., Roy R. Craig)
Solution Manual Mechanics of Materials (3rd Ed., Roy R. Craig)
Solution Manual Simplified Mechanics and Strength of Materials (6th Ed., Ja=
mes Ambrose)
Solution Manual Engineering Applications of Dynamics (Dean Karnopp & Donald=
 Margolis)
Solution Manual Engineering Mechanics : Statics (Arthur Boresi, Richard Sch=
midt)
Solution Manual Engineering Mechanics : Dynamics (Arthur Boresi, Richard Sc=
hmidt)
Solution Manual Engineering Mechanics : Statics (5th Ed., J. L. Meriam, L. =
G. Kraige)
Solution Manual Engineering Mechanics : Statics - SI Version (5th Ed., J. L=
. Meriam, L. G. Kraige)
Solution Manual Engineering Mechanics : Statics (6th Ed., J. L. Meriam, L. =
G. Kraige)
Solution Manual Engineering Mechanics : Statics - SI Version (6th Ed., J. L=
. Meriam, L. G. Kraige)
Solution Manual Engineering Mechanics : Statics (7th Ed., J. L. Meriam, L. =
G. Kraige)
Solution Manual Engineering Mechanics : Dynamics (5th Ed., J. L. Meriam, L.=
 G. Kraige)
Solution Manual Engineering Mechanics : Dynamics - SI Version (5th Ed., J. =

L. Meriam, L. G. Kraige)
Solution Manual Engineering Mechanics : Dynamics (6th Ed., J. L. Meriam, L.=
 G. Kraige)
Solution Manual Engineering Mechanics : Dynamics - SI Version (6th Ed., J. =
L. Meriam, L. G. Kraige)
Solution Manual Engineering Mechanics : Dynamics (7th Ed., J. L. Meriam, L.=
 G. Kraige)
Solution Manual Vector Mechanics for Engineers : Statics (7th Ed., Ferdinan=
d Beer)=20
Solution Manual Vector Mechanics for Engineers : Statics (8th Ed., Ferdinan=
d Beer)=20
Solution Manual Vector Mechanics for Engineers : Dynamics (7th Ed., Ferdina=
nd Beer)=20
Solution Manual Vector Mechanics for Engineers : Dynamics (8th Ed., Ferdina=
nd Beer)=20
Solution Manual Statics : Analysis and Design of Systems in Equilibrium (Sh=
eppard & Tongue)=20
Solution Manual Statics : Analysis and Design of Systems in Equilibrium - U=
pdate Edition (Sheppard & Tongue)
Solution Manual Dynamics : Analysis and Design of Systems in Motion (Sheppa=
rd & Tongue)
Solution Manual Dynamics : Analysis and Design of Systems in Motion (2nd Ed=
., Sheppard & Tongue)
Solution Manual Statics and Mechanics of Materials : An Integrated Approach=
 (2nd Ed., Riley, Sturges & Morris)
Solution Manual Mechanics of Materials (6th Ed., Riley, Sturges & Morris)
Solution Manual Computational Methods in Elasticity and Plasticity : Solids=
 and Porous Media (A. Anandarajah)
Solution Manual Basic Engineering Plasticity : An Introduction with Enginee=
ring and Manufacturing Applications (David Rees)
Solution Manual Theory of Plasticity (3rd Ed. Jagabanduhu Chakrabarty)
Solution Manual Deformation and Fracture Mechanics of Engineering Materials=
 (4th Ed., Richard Hertzberg)
Solution Manual Deformation and Fracture Mechanics of Engineering Materials=
 (5th Ed., Richard Hertzberg, Richard Vinci, Jason Hertzberg)
Solution Manual Deformable Bodies and Their Material Behavior (Haslach & Ar=
mstrong)
Solution Manual Intermediate Mechanics of Materials (1st Ed., Barber)=20
Solution Manual Elasticity (2nd Ed., J.R. Barber)=20
Solution Manual Elasticity : Theory, Applications, and Numerics (1st Ed., M=
artin Sadd)
Solution Manual Elasticity : Theory, Applications, and Numerics (2nd Ed., M=
artin Sadd)
Solution Manual Elasticity in Engineering Mechanics (2nd Ed., Boresi)
Solution Manual Elasticity in Engineering Mechanics (3rd Ed., Boresi, Chong=
, Lee)
Solution Manual Advanced Mechanics of Materials and Applied Elasticity (5th=
 Ed., Ansel C. Ugural & Saul K. Fenster)
Solution Manual Advanced Mechanics of Materials (6th Ed., Boresi) =20
Solution Manual Advanced Mechanics of Materials (2nd Ed., Cook & Young)
Solution Manual Metal Fatigue in Engineering (2nd Ed., Stephens, Fatemi & F=
uchs)
Solution Manual Applied Mechanics for Engineering Technology (8th Ed., Keit=

h M. Walker)
Solution Manual Applied Statics and Strength of Materials (5th Ed. Limbrunn=
er & Spiegel)
Solution Manual Statics and Strength of Materials (Robert Mott)
Solution Manual Applied Strength of Materials (4th Ed., Mott)
Solution Manual Applied Strength of Materials (5th Ed., Mott)
Solution Manual Intermediate Dynamics for Engineers (Marcelo R.M & Crespo d=
a Silva)
Solution Manual Engineering Mechanics : Statics (Michael Plesha, Gary Gray =
& Francesco Costanzo)
Solution Manual Engineering Mechanics : Statics (2nd Ed., Michael Plesha, G=
ary Gray & Francesco Costanzo)
Solution Manual Engineering Mechanics : Dynamics (Michael Plesha, Gary Gray=
 & Francesco Costanzo)
Solution Manual Engineering Mechanics : Statics (4th Ed., Anthony Bedford &=
 Wallace Fowler)
Solution Manual Engineering Mechanics : Statics (5th Ed., Anthony Bedford &=
 Wallace Fowler)
Solution Manual Engineering Mechanics : Statics - SI Units (5th Ed., Anthon=
y Bedford, Wallace Fowler & Yusof Ahmad)
Solution Manual Engineering Mechanics : Dynamics (4th Ed., Anthony Bedford =
& Wallace Fowler)
Solution Manual Engineering Mechanics : Dynamics (5th Ed., Anthony Bedford =
& Wallace Fowler)
Solution Manual Engineering Mechanics : Dynamics - SI Units (5th Ed., Antho=
ny Bedford, Wallace Fowler & Yusof Ahmad)
Solution Manual Elastic And Inelastic Stress Analysis (Irving Shames)
Solution Manual Strength of Materials - A New Unified Theory for the 21st C=
entury (Surya Patnaik & Dale Hopkins)
Solution Manual Statics and Strengths of Materials (6th Ed., Morrow & Koker=
nak)
Solution Manual Statics and Strengths of Materials (7th Ed., Morrow & Koker=
nak)
Solution Manual Engineering Mechanics : Statics (11th Ed., Hibbeler)
Solution Manual Engineering Mechanics : Statics (12th Ed., Hibbeler)
Solution Manual Engineering Mechanics : Statics - SI Units (12th Ed., Hibbe=
ler)
Solution Manual Engineering Mechanics : Dynamics (11th Ed., Hibbeler)
Solution Manual Engineering Mechanics : Dynamics (12th Ed., Hibbeler)
Solution Manual Engineering Mechanics : Dynamics - SI Units (12th Ed., Hibb=
eler)
Solution Manual Mechanics of Materials (4th Ed., Hibbeler)
Solution Manual Mechanics of Materials (6th Ed., Hibbeler)
Solution Manual Mechanics of Materials (7th Ed., Hibbeler)
Solution Manual Mechanics of Materials - SI Units (7th Ed., Hibbeler)
Solution Manual Mechanics of Materials (8th Ed., Hibbeler)
Solution Manual Mechanics of Materials - SI Units (8th Ed., Hibbeler)
Solution Manual Statics and Mechanics of Materials (Beer, Johnston, DeWolf =
& Mazurek)
Solution Manual Statics and Mechanics of Materials (Bedford, Liechti & Fowl=
er)
Solution Manual Statics and Mechanics of Materials (2nd Ed., Hibbeler)
Solution Manual Statics and Mechanics of Materials - SI Units (2nd Ed., Hib=

beler)
Solution Manual Statics and Mechanics of Materials (3rd Ed., Hibbeler)
Solution Manual Statics and Mechanics of Materials - SI Units (3rd Ed., Hib=
beler, Fan Sau Cheong)
Solution Manual Energy Principles and Variational Methods in Applied Mechan=
ics (2nd Ed., Reddy)
Solution Manual The Physics of Vibrations and Waves (6th Ed., Pain)=20
Solution Manual Engineering Vibrations (3rd Ed., Inman)
Solution Manual Theory of Vibrations with Applications (5th Ed., William T.=
 Thomson, Marie Dillon Dahleh)
Solution Manual Mechanical Vibrations - SI Units (4th Ed., Singiresu S. Rao=
)
Solution Manual Mechanical Vibrations (5th Ed., Singiresu S. Rao)
Solution Manual Theory of Vibration : An Introduction (2nd Ed., A.A. Shaban=
a)
Solution Manual Vibration of Discrete and Continuous Systems (2nd Ed., Ahme=
d Shabana)
Solution Manual Introduction to Finite Element Vibration Analysis (Maurice =
Petyt)
Solution Manual Vibrations and Stability : Advanced Theory, Analysis, and T=
ools (2nd Ed., Jon J. Thomsen)=20
Solution Manual Dynamics and Vibration : An Introduction (Magd Abdel Wahab)
Solution Manual Mechanical Vibration (William J. Palm, III)
Solution Manual Random Vibrations : Analysis of Structural and Mechanical S=
ystems (Loren Lutes & Shahram Sarkani)
Solution Manual Mechanical and Structural Vibrations : Theory and Applicati=
ons (by Jerry H. Ginsberg)
Solution Manual Fundamentals of Structural Integrity : Damage Tolerant Desi=
gn and Nondestructive Evaluation (Alten F. Grandt)
Solution Manual A First Course in the Finite Element Method (4th Ed., Daryl=
 L. Logan)
Solution Manual Introduction to Finite Elements in Engineering (3rd Ed.,Tir=
upathi R. Chandrupatla, Ashok D. Belegundu)
Solution Manual Introduction to Finite Elements in Engineering (4th Ed.,Tir=
upathi R. Chandrupatla, Ashok D. Belegundu)
Solution Manual Finite Element Analysis Theory and Application with ANSYS (=
3rd Ed., Moaveni)
Solution Manual An Introduction to the Finite Element Method (3rd Ed., J. N=
. Reddy)
Solution Manual Fundamentals of Finite Element Analysis (1st Ed., David V. =
Hutton)=20
Solution Manual The Finite Element Method in Engineering (4th Ed., Rao)
Solution Manual The Finite Element Method in Engineering (5th Ed., Rao)
Solution Manual The Finite Element Method and Applications in Engineering U=
sing ANSYS (Madenci & Guven)=20
Solution Manual Introduction to Finite Element Analysis and Design (Nam-Ho =
Kim, Bhavani V. Sankar)
Solution Manual Introduction to the Finite Element Method : Theory, Program=
ming and Applications (Erik G. Thompson)
Solution Manual The Finite Element Method : Its Basis and Fundamentals (6th=
 Ed., Zienkiewicz, R. L. Taylor & J.Z. Zhu)
Solution Manual Fundamental Finite Element Analysis and Applications : with=
 Mathematica and Matlab Computations (Asghar Bhatti)

Solution Manual Advanced Topics in Finite Element Analysis of Structures : =
With Mathematica and MATLAB Computations (Asghar Bhatti)=20
Solution Manual Modeling and Analysis of Dynamic Systems (3rd Ed., Close)
Solution Manual Modeling and Simulation of Dynamic Systems (Robert Woods, J=
r. & Kent Lawrence)
Solution Manual Modeling, Analysis, and Control of Dynamic Systems (2nd Ed.=
, William J. Palm, III)
Solution Manual System Dynamics (1st Ed., William J Palm III)
Solution Manual System Dynamics (2nd Ed., William J Palm III)
Solution Manual System Dynamics and Response (S. Graham Kelly)
Solution Manual System Dynamics for Engineering Students : Concepts and App=
lications (Nicolae Lobontiu)
Solution Manual Dynamic Modeling and Control of Engineering Systems (2nd Ed=
., J. Lowen Shearer, Bohdan Kulakowski, John Gardner)
Solution Manual System Dynamics : Modeling and Simulation of Mechatronic Sy=
stems (4th Ed., Karnopp, Margolis & Rosenberg)
Solution Manual System Dynamics : Modeling, Simulation, and Control of Mech=
atronic Systems (5th Ed., Dean C. Karnopp, Donald L. Margolis, Ronald C. Ro=
senberg)
Solution Manual Concepts and Applications of Finite Element Analysis (4th E=
d., Cook, Malkus, Plesha & Witt)
Solution Manual Finite Element Modeling for Stress Analysis (Robert Cook)=
=20
Solution Manual Principles of Fracture Mechanics (R. J. Sanford)
Solution Manual Fracture Mechanics (Chin-Teh Sun & Zhihe Jin)
Solution Manual Fracture Mechanics : Fundamentals and Applications (2nd Ed.=
, T.L. Anderson)
Solution Manual Mechanical Behavior of Materials (3rd Ed., Dowling)
Solution Manual Mechanical Behavior of Materials (4th Ed., Dowling)
Solution Manual Mechanical Behavior of Materials (W.F. Hosford)=20
Solution Manual Mechanical Behavior of Materials (Keith Bowman)
Solution Manual Theory and Design for Mechanical Measurements (4th Ed., Fig=
liola & Beasley)
Solution Manual Theory and Design for Mechanical Measurements (5th Ed., Fig=
liola & Beasley)
Solution Manual Theory and Design for Mechanical Measurements - Internation=
al Student Version (5th Ed., Figliola & Beasley)
Solution Manual Mechanical Measurements (6th Ed., Beckwith, Marangoni & Lie=
nhard)
Solution Manual Measurement and Instrumentation : Theory and Application (A=
lan Morris & Reza Langari)
Solution Manual Measurement and Data Analysis for Engineering and Science (=
Patrick Dunn)
Solution Manual Design and Analysis of Lean Production Systems (Askin & Gol=
dberg)=20
Solution Manual Computer-Aided Manufacturing (3rd Ed., Tien-Chien Chang, Ri=
chard A. Wysk, Hsu-Pin Wang)
Solution Manual Work Systems : The Methods, Measurement & Management of Wor=
k (Mikell P. Groover)
Solution Manual Automation, Production Systems, and Computer-Integrated Man=
ufacturing (2nd Ed., Groover)
Solution Manual Automation, Production Systems, and Computer-Integrated Man=
ufacturing (3rd Ed., Groover)

Solution Manual Fundamentals of Modern Manufacturing : Materials, Processes=
, and Systems (3rd Ed., Mikell Groover)
Solution Manual Fundamentals of Modern Manufacturing : Materials, Processes=
, and Systems (4th Ed., Mikell Groover)
Solution Manual Introduction to Manufacturing Processes (Mikell Groover)
Solution Manual Materials and Processes in Manufacturing (9th Ed., E. Paul =
DeGarmo, J. T. Black, Ronald A. Kohser)
Solution Manual DeGarmo's Materials and Processes in Manufacturing (10th Ed=
., E. Paul DeGarmo, J. T. Black, Ronald A. Kohser)
Solution Manual DeGarmo's Materials and Processes in Manufacturing (11th Ed=
., J. T. Black, Ronald A. Kohser)
Solution Manual Principles of Metal Manufacturing Processes (Beddoes & Bibb=
y)
Solution Manual Design for Manufacturing : A Structured Approach (Corrado P=
oli)
Solution Manual Fundamentals of Manufacturing (2nd Ed., Philip D. Rufe)
Solution Manual Engineering Materials Science (Milton Ohring)
Solution Manual Engineering Materials : Properties and Selection (8th Ed., =
Budinski)
Solution Manual Engineering Materials : Properties and Selection (9th Ed., =
Budinski)
Solution Manual Materials Science for Engineering Students (Traugott Fische=
r)
Solution Manual Essentials of Modern Materials Science and Engineering (Jam=
es Newell)
Solution Manual Science and Design of Engineering Materials (2nd Ed., Schaf=
fer, Saxena, et al)
Solution Manual Structure and Properties of Engineering Materiales (5th Ed.=
, Daniel Henkel & Alan Pense)
Solution Manual Materials Selection in Mechanical Design (3rd Ed., Michael =
Ashby)
Solution Manual Materials Selection in Mechanical Design (4th Ed., Michael =
Ashby)
Solution Manual Materials : Engineering, Science, Processing and Design (1s=
t Ed., Michael Ashby, Hugh Shercliff & David Cebon)
Solution Manual Materials : Engineering, Science, Processing and Design (2n=
d Ed., Michael Ashby, Hugh Shercliff & David Cebon)
Solution Manual Engineering Materials Vol. 1 : An Introduction to Propertie=
s, Applications and Design (3rd Ed., Michael Ashby & David Jones)=20
Solution manual Engineering Materials Vol. 1 : An Introduction to Propertie=
s, Applications and Design (4th Ed., Michael Ashby & David Jones)
Solution Manual Engineering Materials Vol. 2 : An Introduction to Microstru=
ctures, Processing and Design (3rd Ed., Michael Ashby & David Jones)
Solution Manual Materials Science and Engineering : An Introduction (6th Ed=
., William Callister)=20
Solution Manual Materials Science and Engineering : An Introduction (7th Ed=
., William Callister)=20
Solution Manual Materials Science and Engineering : An Introduction (8th Ed=
., William Callister)=20
Solution Manual Fundamentals of Materials Science and Engineering : Integra=
ted Approach (2nd Ed., William Callister)
Solution Manual Fundamentals of Materials Science and Engineering : Integra=
ted Approach (3rd Ed., William Callister)

Solution Manual Foundations of Materials Science and Engineering (3rd Ed, S=
mith)
Solution Manual Foundations of Materials Science and Engineering (4th Ed, S=
mith & Hashemi)
Solution Manual Foundations of Materials Science and Engineering (5th Ed, S=
mith & Hashemi)
Solution Manual Introduction to Materials Science for Engineers (6th Ed., S=
hackelford)
Solution Manual Introduction to Materials Science for Engineers (7th Ed., S=
hackelford)
Solution Manual Introduction to Materials Science for Engineers - Internati=
onal Edition (7th Ed., Shackelford)
Solution Manual Manufacturing Facilities Design and Material Handling (3rd =
Ed., Meyers & Stephens)
Solution Manual Manufacturing Facilities Design and Material Handling (4th =
Ed., Stephens & Meyers)
Solution Manual Technology Of Machine Tools (7th Ed., Steve F. Krar, Arthur=
 R. Gill, Peter Smid)
Solution Manual Manufacturing Processes for Engineering Materials (5th Ed. =
Kalpakjian & Smith)
Solution Manual Manufacturing Processes for Engineering Materials - SI Unit=
s (5th Ed. Kalpakjian, Smith & Chih-Wah Kok)
Solution Manual Manufacturing, Engineering & Technology (5th Ed. Kalpakjian=
 & Smith)
Solution Manual Manufacturing, Engineering & Technology (6th Ed. Kalpakjian=
 & Smith)
Solution Manual Manufacturing, Engineering & Technology - SI Units (6th Ed.=
 Kalpakjian & Smith)
Solution Manual Principles of Corrosion Engineering and Corrosion Control (=
Zaki Ahmad)
Solution Manual Steels : Microstructure and Properties (3rd Ed. Bhadeshia &=
 Honeycombe)
Solution Manual Analysis and Performance of Fiber Composites (3rd Ed., Bhag=
wan Agarwal, Lawrence Broutman & K. Chandrashekhara)
Solution Manual Nanoengineering of Structural, Functional and Smart Materia=
ls (Mark Schulz, Ajit Kelkar, Mannur Sundaresan)
Solution Manual Applied Manufacturing Process Planning : With Emphasis on M=
etal Forming and Machining (Nelson, Schneider)
Solution Manual Mastering CAD/CAM (1st Ed., Ibrahim Zeid)=20
Solution Manual Principles of CAD/CAM/CAE (Kunwoo Lee)
Solution Manual Computer Numerical Control : Operation and Programming (3rd=
 Ed., Stenerson & Curran)
Solution Manual Introduction to Computer Numerical Control (4th Ed., Valent=
ino & Goldenberg)
Solution Manual Linear State-Space Control Systems (Robert L. Williams, II =
& Douglas A. Lawrence)
Solution Manual Gas Turbine Theory (6th Ed., H.I.H. Saravanamuttoo, G.F.C. =
Rogers, H. Cohen & Paul Straznicky)
Solution Manual Rocket Propulsion Elements (7th Ed., George P. Sutton & Osc=
ar Biblarz)
Solution Manual Rocket Propulsion Elements (8th Ed., George P. Sutton & Osc=
ar Biblarz)
Solution Manual Orbital Mechanics for Engineering Students (1st Ed., Howard=

 Curtis)
Solution Manual Orbital Mechanics for Engineering Students (2nd Ed., Howard=
 Curtis)
Solution Manual Atmospheric and Space Flight Dynamics : Modeling and Simula=
tion with MATLAB and Simulink (Ashish Tewari)
Solution Manual Flight Dynamics Principles (2nd Ed., by Cook)
Solution Manual Mechanics of Flight (1st Ed., Warren F. Phillips)=20
Solution Manual Mechanics of Flight (2nd Ed., Warren F. Phillips)
Solution Manual Modern Flight Dynamics (David K. Schmidt)
Solution Manual Fundamentals of Airplane Flight Mechanics (David G. Hull)
Solution Manual Dynamics of Flight : Stability and Control (3rd Ed., Bernar=
d Etkin & Lloyd Duff Reid)
Solution Manual Aircraft Rescue and Firefighting (5th Ed., IFSTA)
Solution Manual Aircraft Dynamics : From Modeling to Simulation (Marcello N=
apolitano)
Solution Manual Aircraft Propulsion (Saeed Farokhi)
Solution Manual Aircraft Performance (Maido Saarlas)
Solution Manual Design of Aircraft (Thomas C. Corke)
Solution Manual Flight Performance of Fixed and Rotary Wing Aircraft (Anton=
io Filippone)
Solution Manual Fundamentals Of Aircraft Structural Analysis (Howard Curtis=
)
Solution Manual Aircraft Control and Simulation (2nd Ed., Brian Stevens & F=
rank Lewis)
Solution Manual Aircraft Structures for Engineering Students (3rd Ed., T.H.=
G. Megson)=20
Solution Manual Aircraft Structures for Engineering Students (4th Ed., T.H.=
G. Megson)
Solution Manual Aircraft Structures for Engineering Students (5th Ed., T.H.=
G. Megson)
Solution Manual Aerodynamics for Engineering Students (6th Ed., E. L. Hough=
ton, P. W. Carpenter, Steven Collicott, Dan Valentine)
Solution Manual Introduction to Aircraft Structural Analysis (T.H.G. Megson=
)
Solution Manual Mechanics of Aircraft Structures (2nd Ed, C. T. Sun)
Solution Manual Principles of Helicopter Aerodynamics (1st Ed., Leishman)
Solution Manual Fundamentals of Aerodynamics (2nd Ed., Anderson)
Solution Manual Fundamentals of Aerodynamics (3th Ed., Anderson)
Solution Manual Fundamentals of Aerodynamics (4th Ed., Anderson)
Solution Manual Fundamentals of Aerodynamics (5th Ed., Anderson)
Solution Manual Aerodynamics for Engineers (5th Ed., John Bertin & Russell=
 Cummings)
Solution Manual Introduction to Flight (5th Ed., Anderson)
Solution Manual Introduction to Flight (6th Ed., Anderson)
Solution Manual Introduction to Flight (7th Ed., Anderson)
Solution Manual Mechatronics : Principles and Applications (Godfrey Onwubol=
u)
Solution Manual Mechatronics (Sabri Cetinkunt)
Solution Manual Introduction to Mechatronic Design (J. Edward Carryer, Matt=
hew Ohline & Thomas Kenny)
Solution Manual Introduction to Mechatronics and Measurement Systems (2nd E=
d., David Alciatore & Michael Histand)
Solution Manual Introduction to Mechatronics and Measurement Systems (3rd E=

d., David Alciatore & Michael Histand)
Solution Manual Introduction to Mechatronics and Measurement Systems (4th E=
d., David Alciatore & Michael Histand)
Solution Manual Introduction to Engineering Experimentation (2nd Ed., Wheel=
er & Ganji)
Solution Manual Introduction to Engineering Experimentation (3rd Ed., Wheel=
er & Ganji)
Solution Manual Gas Dynamics (3rd Ed., John & Keith)=20
Solution Manual Fundamentals of Gas Dynamics (2nd Ed, Robert D. Zucker)
Solution Manual Theory of Ground Vehicles (3rd Ed., J. Y. Wong)
Solution Manual Theory of Ground Vehicles (4th Ed., J. Y. Wong)
Solution Manual Vehicle Dynamics : Theory and Application (Reza Jazar)
Solution Manual Engineering Fundamentals of the Internal Combustion Engine =
(2nd Ed., Willard W. Pulkrabek)
Solution Manual Internal Combustion Engines : Applied Thermosciences (2nd E=
d., Ferguson & Kirkpatrick)
Solution Manual Advanced Engine Performance Diagnosis (4th Ed., James Halde=
rman)
Solution Manual Automotive Engines (8th Ed., Crouse)=20
Solution Manual Automotive Heating & Air Conditioning (5th Ed., Tom Birch)
Solution Manual Diagnosis and Troubleshooting of Automotive Electrical, Ele=
ctronic, and Computer Systems (5th Ed., James Halderman)
Solution Manual Automotive Brake Systems Package (4th Ed., Rehkopf)
Solution Manual Automotive Brake Systems (4th Ed., Halderman)
Solution Manual Automotive Engine Performance (2nd Ed., Halderman)
Solution Manual Automotive Engines : Theory and Servicing (6th Ed., James H=
alderman)=20
Solution Manual Automotive Fuel and Emissions Control Systems (2nd Ed., Jam=
es Halderman & James Linder)
Solution Manual Automotive Science and Mathematics (Allan Bonnick)
Solution Manual Automotive Mathematics (Jason Rouvel)
Solution Manual Automotive Service Management (Andrew Rezin)
Solution Manual Automotive Technology : Principles, Diagnosis, and Service =
(3rd Ed., Halderman)
Solution Manual Automotive Steering, Suspension, and Alignment (4th Ed., Ha=
lderman)
Solution Manual Automatic Transmissions & Transaxles (4th Ed., Tom Birch & =
Chuck Rockwood)
Solution Manual Hybrid and Alternative Fuel Vehicles (Halderman & Martin)
Solution Manual Manual Drivetrains and Axles (5th Ed., Birch & Rockwood)
Solution Manual Blueprint Reading for the Machine Trades (6th Ed., Schultz =
& Smith)
Solution Manual Modern Welding Technology (6th Ed., Cary & Helzer)
Solution Manual Tissue Engineering (Bernhard O. Palsson & Sangeeta N. Bhati=
a)=20
Solution Manual Tissue Engineering (Clemens van Blitterswijk, et al.)
Solution Manual Tissue Mechanics (Cowin, Doty)
Solution Manual Technology and Society (3rd Ed., Hjorth, Eichler, Khan & Mo=
rello)
Solution Manual BTEC First Engineering Curriculum Support Pack (Mike Tooley=
)
Solution Manual BTEC First Engineering (Mike Tooley)
Solution Manual Exploring Engineering : An Introduction to Engineering and =

```
Design (1st Ed., Philip Kosky, George Wise, Robert Balmer & William Keat)
Solution Manual Exploring Engineering : An Introduction to Engineering and =
Design (2nd Ed., Philip Kosky, Robert Balmer, William Keat & George Wise)
Solution Manual Engineering Science (5th Ed., W. Bolton)
Solution Manual Principles of Energy Conversion (2nd Ed., Archie W. Culp)
Solution Manual Fundamentals of Renewable Energy Processes (1st Ed., Aldo d=
a Rosa)=20
Solution Manual Fundamentals of Renewable Energy Processes (2nd Ed., Aldo d=
a Rosa)
Solution Manual Alternative Energy Systems (B. K. Hodge)
Solution Manual Modeling, Analysis and Optimization of Process and Energy S=
ystems (F. Carl Knopf)=20
Solution Manual Solar Energy Engineering : Processes and Systems (Soteris K=
alogirou)
Solution Manual Solar Engineering of Thermal Processes (2nd Ed., John Duffi=
e & William Beckman)
Solution Manual Solar Engineering of Thermal Processes (3rd Ed., John Duffi=
e & William Beckman)
Solution Manual Energy Technology and Directions for the Future (Fanchi)
Solution Manual Power Generation Technologies (Paul Breeze)
Solution Manual Foundations of Engineering (2nd Ed, Holtzapple & Dan Reece)
Solution Manual Industrial Mechanics and Maintenance (3rd Ed., Larry Chasta=
in)
Solution Manual Mechanical and Electrical Equipment for Buildings (10th Ed.=
, Stein, Reynolds, Grondzik, Kwok)
Solution Manual Mechanical and Electrical Equipment for Buildings (11th Ed.=
, Grondzik, Kwok, Stein & Reynolds)
Solution Manual Mechanical & Electrical Systems in Buildings (4th Ed., Rich=
ard Janis & William Tao)
Solution Manual Engineering Drawing And Design (7th Ed., Jensen, Helsel & S=
hort)=20
Solution Manual Pipe Drafting and Design (3rd Ed., Roy A. Parisher)=20
Solution Manual Autodesk Inventor (James M. Leake)=20
Solution Manual Engineering Design Graphics : Sketching, Modeling, and Visu=
alization (1st Ed., James Leake & Jacob Borgerson)
Solution Manual Orthopaedic Biomechanics : Mechanics and Design in Musculos=
keletal Systems (Donald Bartel, Dwight Davy & Tony Keaveny)
Solution Manual Science for Engineering (3rd Ed., John Bird)

List of Solutions Manuals and Test Banks=20
----------------------------------------

contact to :         mattosbw1@gmail.com                     mattosbw1(at)g=
mail.com

  =20

NOTE :  "THIS SERVICE IS NOT AVAILABLE FOR :   CHINA, INDIA, RUSSIA, PAKIST=
AN, IRAQ, IRAN, PHILIPPINES, NORTH KOREA, NEPAL, BANGLADESH, SRI LANKA, MAL=
DIVES, BHUTAN & COLOMBIA".

If your wanted solutions manual is not in this list, also can ask me if is =
available (it is a partial list). Then if you need solutions manual only co=
ntact me by email.=20

"ARE NOT AVAILABLES BOOKS IN DIGITAL FORMAT", ONLY SOLUTIONS MANUALS AND TE=
ST BANKS.
```

I do not review the forums, just send me an email. Please do not use emails=
 from servers "LIVE" , all they are take as spam emails in my inbox.

- Mechanics, Mechanical Engineering & Aerospace Engineering:

Solution Manual Classical Mechanics (Douglas Gregory)=20
Solution Manual Classical Mechanics : From Newton to Einstein : A Modern In=
troduction (2nd Ed., Martin McCall)=20
Solution Manual Advanced Dynamics (Donald T. Greenwood)
Solution Manual Principles of Dynamics (2nd Ed., Donald T. Greenwood)
Solution Manual Advanced Engineering Dynamics (2nd Ed., Jerry Ginsberg)
Solution Manual Classical Dynamics (Jorge V. Jos=E9)=20
Solution Manual Impact Mechanics (W.J. Stronge)
Solution Manual Human Body Dynamics (Aydin Tozeren)
Solution Manual Statistical Mechanics (2nd Ed., R.K. Pathria)
Solution Manual Statistical Mechanics (3rd Ed., R.K. Pathria & Paul D. Beal=
e)
Solution Manual Engineering Mechanics of Solids (2nd Ed., Egor P. Popov)
Solution Manual Introduction to Continuum Mechanics (4th Ed., W. Michael La=
i, David Rubin & Erhard Krempl)
Solution Manual Analytical Mechanics (7th Ed., Grant R. Fowles, George Cass=
iday)
Solution Manual Introduction to Mechanical Engineering (Rizza)
Solution Manual Engineering Fundamentals and Problem Solving (4th Ed., Eide=
, Jenison, Mashaw & Northup)
Solution Manual Engineering Fundamentals and Problem Solving (5th Ed., Eide=
, Jenison, Northup & Mickelson)
Solution Manual Engineering Fundamentals and Problem Solving (6th Ed., Eide=
, Jenison, Northup & Mickelson)
Solution Manual Mechanical Engineering Principles (Bird & Ross)=20
Solution Manual Dynamics of Mechanical Systems (C.T.F. Ross)
Solution Manual Mechanics of Solids (C.T.F. Ross)
Solution Manual Introduction to Engineering Analysis (1st Ed., Hagen)
Solution Manual Introduction to Engineering Analysis (2nd Ed., Hagen)
Solution Manual Introduction to Engineering Analysis (3rd Ed., Hagen)
Solution Manual Engineering Design (Rudolph J. Eggert)
Solution Manual Creative Design of Products and Systems (Saeed Niku)
Solution Manual Fundamentals of Engineering Design (2nd Ed., Barry Hyman)
Solution Manual Engineering Design (4th Ed., George Dieter & Linda Schmidt)
Solution Manual Engineering Design (5th Ed., George Dieter & Linda Schmidt)
Solution Manual Engineering Design and Graphics with Autodesk Inventor 2009=
 (James Bethune)
Solution Manual Engineering Design : A Project-Based Introduction (2nd Ed.,=
 Clive Dym & Patrick Little)=20
Solution Manual Engineering Design : A Project-Based Introduction (3rd Ed.,=
 Clive Dym & Patrick Little)=20
Solution Manual Tools and Tactics of Design (Dominick, Demel, Lawbaugh, Fre=

uler, Kinzel & Fromm)
Solution Manual Biofluid Mechanics - An Introduction to Fluid Mechanics, Ma=
crocirculation, and Microcirculation (David Rubenstein, Wei Yin & Mary Fram=
e)
Solution Manual Advanced Fluid Mechanics (William Graebel)=20
Solution manual Modern Fluid Dynamics (Clement Kleinstreuer)
Solution manual Essential Computational Fluid Dynamics (Oleg Zikanov)
Solution Manual Computational Fluid Dynamics : A Practical Approach (Jiyuan=
 Tu, Guan Heng Yeoh & Chaoqun Liu)
Solution Manual Mechanics of Fluids (8th Ed., Massey)=20
Solution Manual Fluid Mechanics (5th Ed., Frank White)=20
Solution Manual Fluid Mechanics (6th Ed., Frank White)
Solution Manual Fluid Mechanics (7th Ed., Frank White)
Solution Manual Viscous Fluid Flow (3rd Ed., Frank White)=20
Solution Manual Statistical Thermodynamics (Normand Laurendeau)
Solution Manual Introductory Statistical Thermodynamics (Nils Dalarsson , M=
ariana Dalarsson & Leonardo Golubovic)
Solution Manual Thermodynamics and Heat Power (6th Ed., Kurt C. Rolle)
Solution Manual Modern Engineering Thermodynamics (Robert Balmer)
Solution Manual Introduction to the Thermodynamics of Materials (4th Ed. Da=
vid Gaskell)
Solution Manual Introduction to Thermodynamics and Heat Transfer (2nd Ed., =
Yunus Cengel)
Solution Manual Thermal Design : Heat Sinks, Thermoelectrics, Heat Pipes, C=
ompact Heat Exchangers, and Solar Cells (HoSung Lee)
Solution Manual Fundamentals of Thermal-Fluid Sciences (1st Ed., Yunus Ceng=
el)=20
Solution Manual Fundamentals of Thermal-Fluid Sciences (2nd Ed., Yunus Ceng=
el)
Solution Manual Fundamentals of Thermal-Fluid Sciences (3rd Ed., Yunus Ceng=
el & Robert Turner)
Solution Manual Fundamentals of Thermal-Fluid Sciences (4th Ed., Yunus Ceng=
el , Robert Turner & John Cimbala)
Solution Manual Thermodynamics : An Engineering Approach (5th Ed., Yunus Ce=
ngel)=20
Solution Manual Thermodynamics : An Engineering Approach (6th Ed., Yunus Ce=
ngel & Michael Boles)=20
Solution Manual Thermodynamics : An Engineering Approach (7th Ed., Yunus Ce=
ngel & Michael Boles)
Solution Manual Essentials of Fluid Mechanics : Fundamentals and Applicatio=
ns (1st Ed., Yunus Cengel, John Cimbala) =20
Solution Manual Fluid Mechanics (1st Ed., Yunus Cengel & John Cimbala)=20
Solution Manual Fluid Mechanics (2nd Ed., Yunus Cengel & John Cimbala)=20
Solution Manual Heat Tranfer (2nd Ed., Yunus Cengel)=20
Solution Manual Heat and Mass Transfer : A Practical Approach (3rd Ed., Yun=
us Cengel)=20
Solution Manual Heat and Mass Transfer : Fundamentals and Applications (4th=
 Ed., Yunus Cengel & Afshin Ghajar)
Solution Manual Introduction to Fluid Mechanics (6th Ed., Robert Fox, Alan =
McDonald & Philip Pritchard)
Solution Manual Introduction to Fluid Mechanics (7th Ed., Robert Fox, Phili=
p Pritchard & Alan McDonald)
Solution Manual Fox and McDonald's Introduction to Fluid Mechanics (8th Ed.=

, Philip Pritchard)
Solution Manual Fluid Mechanics (5th Ed., Douglas)
Solution Manual Fluid Mechanics (3rd Ed., Kundu & Cohen)=20
Solution Manual Fluid Mechanics (4th Ed., Kundu & Cohen)=20
Solution Manual Fluid Mechanics (5th Ed., Kundu , Cohen & Dowling)
Solution Manual Elementary Fluid Mechanics (7th Ed., Street, Watters & Venn=
ard)
Solution Manual Fluid Mechanics with Engineering Applications (10th Ed., Fi=
nnemore & Franzini)=20
Solution Manual Fundamentals of Fluid Mechanics (4th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi)=20
Solution Manual Fundamentals of Fluid Mechanics (5th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi)
Solution Manual Fundamentals of Fluid Mechanics (6th Ed., Bruce Munson, Don=
ald Young, Theodore Okiishi, Wade Huebsch)
Solution Manual Fundamentals of Fluid Mechanics - SI Units (6th Ed., Bruce =
Munson, Donald Young, Theodore Okiishi, Wade Huebsch)
Solution Manual Fundamentals of Fluid Mechanics (7th Ed., Bruce Munson, The=
odore Okiishi, Wade Huebsch, Alric Rothmayer)
Solution Manual A Brief Introduction to Fluid Mechanics (3rd Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi)
Solution Manual A Brief Introduction to Fluid Mechanics (4th Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi, Wade Huebsch)
Solution Manual A Brief Introduction to Fluid Mechanics (5th Ed., Donald Yo=
ung, Bruce Munson, Theodore Okiishi, Wade Huebsch)
Solution Manual Engineering Fluid Mechanics (7th Ed., Clayton Crowe, Donald=
 Elger, John Roberson)
Solution Manual Engineering Fluid Mechanics (8th Ed., Clayton Crowe, Donald=
 Elger, John Roberson)
Solution Manual Engineering Fluid Mechanics (9th Ed., Clayton Crowe, Donald=
 Elger, John Roberson, Barbara Williams)
Solution Manual Engineering Fluid Mechanics - SI Version (9th Ed., Clayton =
Crowe, Donald Elger, John Roberson, Barbara Williams)
Solution Manual Fluid Mechanics (Potter & Foss)
Solution Manual Mechanics of Fluids (3rd Ed., Potter)
Solution Manual Fluid Power with Applications (7th Ed., Esposito)
Solution Manual Mechanics of Fluids (4th Ed., Shames)
Solution Manual Applied Fluid Mechanics (6th Ed., Mott) =20
Solution Manual Applied Fluid Mechanics - SI Units (6th Ed., Mott) =20
Solution Manual Hydraulic Control Systems (Noah Manring)
Solution Manual Fluid Mechanics and Thermodynamics of Turbomachinery (5th E=
d., S.L. Dixon)=20
Solution Manual Fluid Mechanics and Thermodynamics of Turbomachinery (6th E=
d., S.L. Dixon & Cesare Hall)
Solution Manual The Design of High-Efficiency Turbomachinery and Gas Turbin=
es (2nd Ed., David Gordon Wilson & Theododios Korakianitis)
Solution Manual Fundamentals of Turbomachinery (William Peng)
Solution Manual Principles of Turbomachinery in Air-Breathing Engines (Bask=
harone)
Solution Manual Theory of Aerospace Propulsion (Pasquale Sforza)
Solution Manual Fundamentals of Jet Propulsion with Applications (Ronald D.=
 Flack)
Solution Manual Extended Irreversible Thermodynamics (3rd Ed., D. Jou, J. C=

```
asas-Vazquez & G. Lebon)
Solution Manual Thermodynamics : An Integrated Learning System (Schmidt, Ez=
ekoye, Howell & Baker)
Solution Manual Design of Fluid Thermal Systems (2nd Ed., William Janna)
Solution Manual Design and Simulation of Thermal Systems (N.V. Suryanarayan=
a & Oner Arici)
Solution Manual Introduction to Thermal and Fluids Engineering (Kaminski & =
Jensen)
Solution Manual Heating, Ventilating and Air Conditioning Analysis and Desi=
gn (6th Ed., McQuiston)
Solution Manual Heating, Ventilation, and Air Conditioning in Buildings (1s=
t Ed., John W. Mitchell, James E. Braun)
Solution manual Heating and Cooling of Buildings : Design for Efficiency (2=
nd Ed., Jan Kreider, Peter Curtiss & Ari Rabl)
Solution Manual Electricity, Electronics, and Control Systems for HVAC (4th=
 Ed., Thomas Kissell)
Solution Manual Heat and Mass Transfer (Anthony Mills)
Solution Manual Heat Transfer (2nd Ed., A.F. Mills)
Solution Manual Basic Heat and Mass Transfer (2nd Ed., A.F. Mills)
Solution Manual Convective Heat and Mass Transfer (4th Ed., Kays & Crawford=
)
Solution Manual Advanced Engineering Thermodynamics (3rd Ed., Bejan)
Solution Manual Convection Heat Transfer (3rd Ed., Bejan)
Solution Manual Design with Constructal Theory (Adrian Bejan & Sylvie Loren=
te)
Solution Manual Shape and Structure, from Engineering to Nature (Adrian Bej=
an)

We (the group excluding Szczepan) have some good discussions.
Szczepan can be amusing in the views he puts forward. I can't work out whether he is trying to tease us or really is confused.

I suppose there's also the hope that Szczepan might read and understand the information that some of us are showing him. It's a bit like trying to explain radio to a youngster except that a youngster will listen and learn.
Szczepan's idea of using a well to get an infinite supply of electrons made me smile. We've a lot of disused coal pits in my part of England and it would be great to turn them into electron mines. We could dispense with coal fired power stations, wind turbines, solar cells.
Not sure if the electrons would be packed in bottles (like water) or in sacks (like coal).

73, Ian.

I think it is not productive to reply to every posting with "you are
a babbling idiot". That is not going to convince him that he is, and
it just annoys the others.

When you ask him real questions, he either does not answer or he digs up
some prehistoric finding that may have been accurate at that time, but
can easily be disproven today.

For example, his theory that an antenna acts like a vacuum diode, emitting
electrons during one phase of the HF voltage and not taking them back
during the next phase, clearly must be wrong. If it were true, an antenna
would be a nonlinear element that would cause intermodulation. As we
don't see that happen on a well-designed antenna (it *does* happen when
there are bad contacts with diode-effect in the antenna), we know that
an antenna by itself cannot be nonlinear and so there cannot be a net
flow of electrons.

He cannot dispute that so he wanders of in a different direction.

Hello Rob.
I can't answer your point about the "babbling idiot" postings as I'm not the one who makes them.
Szczepan reminds me of an elderly relative who grew up in the 1920s when electronics was large components on wooden baseboards. They seemed to be developed from mechanical engineering (see if and understand it). It was a challenge to get the relative to understand that any progress had been made since the days of valves. Szczepan seems to have grasped electronics as being the movement of electrons and has muddled that up with air or liquid flow.
Initially, I hoped that a polite explanation would help him but after a few weeks I realised that he's not capable of understanding and learning (always assuming that he isn't an Extra Class licensee having a big laugh - which is why I enjoy the humour in his postings).

He seems to go around in circles lasting several weeks - I think that the thoughts in some of his recent postings are similar to ones he made a month or more ago.

73, Ian.

In EM the electricity is like the LIQUID flow (incompressible and massles).
In electronics is GAS flow. Electron gas. Electrons have mass.

Do you see the difference between massive GAS and massles LIQUID?

Szczepan, you say that liquids are massles (I assume that you means
massless). This is definitely wrong. Thanks for the laugh.
Regards, Ian.

In 1884 Heavisde wrote the EM. He assumed that electricity and magnetism are
like the massless liquid.

Hello Szczepan. Liquids definitely are not massless.

> during the next phase, clearly must be wrong.

The antenna always has the counterpoise:
"A counterpoise which consists of one or more wires in a network insulated

from the ground will often reduce loss resistances which might occur when the quarterwave antenna is connected to poorly conducting earth. The counterpoise in the case of a network of several wires acts as a condenser plate with high capacity to earth, with the result of lower loss in the antenna system; for this reason the counterpoise should be fairly close to the ground. [See Fig. 1.] "
From: http://www.antennex.com/shack/Dec06/cps.html

Joel dipole has the two legs.
One of them is the antenna and the second the counterpoise.

The net flow of electrons is from the counterpoise to end of antenna.

Always is the "DC" (net electron flow) from the counterpoise to end of an
antenna.

How do you explain that there is no intermodulation as a result of
the nonlinearity of the antenna that you claim?

Hello readers. I've had a busy day on the keyboard and my stubby fingers
are rather tired. Anyone else want to try to explain to Szczepan the
differences between DC and AC. Shall we simply say that
  DC = direct current and
  AC = alternating current
and there's a big and significant difference between "direct" and
"alternating"?
How about
  direct = flat road
  alternating = road with hills and valleys?
I think that Szczepan may understand "flat", "hills" and "valleys" but I
wouldn't care to bet on it. Maybe he'll start to quote from National
Geographic.
Wonder what would happen if he plugged his computer into a DC supply rather
than an AC supply?
73, Ian.

This is just word salad nonsense.

There is no such thing as a massles (sic) liquid.

You are a babbling idiot.

Hey Szczepan,

What do you think about the Higgs Boson?
It was described in 1964 and found in 2012, so probably after the
closing date for new inventions in your book.

Does it exist?

On the contrary, his history on sci.phyics.elecromag shows if all his
posts get the same response from everyone, he at least goes away for
a while.

It is utterly hopeless to think he can be educated.

Heavide (sic) didn't "wrote the EM", he speculated about the nature of EM.

And in the intervening 128 years everyone but you has come to realize
that his speculations were incorrect.

You are an ineducable idiot.

> From: http://www.antennex.com/shack/Dec06/cps.html

Again, you take a random quote out of context.

The quote is talking about end fed vertical antennas, and ONLY end fed vertical antennas.

It is NOT true for OTHER types of antennas.

> Joel dipole has the two legs.
> One of them is the antenna and the second the counterpoise.

Nope, measurment of the voltages, currents, and fields show this to be wrong.

> The net flow of electrons is from the counterpoise to end of antenna.
> S*

Nope, measurment shows this to be wrong.

You are an ineducable idiot.

> The antenna always has the counterpoise:

Where is the counterpoise for these antennna:

A full wave loop antenna

A slot antenna

A horn antenna

For the purposes of the discussion, each antenna is driven by a small, modular oscillator that has no chassis or metalwork of any kind and is located half way between the Milky Way and the Andromeda Galaxy, i.e. it is about 1,250,000 million light years from anything.

Amen to that!

Last year, I put up three 30-foot poles to support a 20m dipole at its optimum height. This year, I thought I was gettting off easy with just one pole. Maybe so, but with the top section having a crossarm and the extra weight of the elements and tethers, getting that sucker up the same 30 feet was still an adventure. I'm thinking of something simpler next year and not ruling out being a home station for the first time ever.

I've said I keep my excess electons (from leakage) in old shoe boxes. Szczepan said I should instead be using Leyden jars.

I am here to learn.

Lately I have learn from Bilou:
"In such cases it is convenient to put the things to their limits.
Imagine the diameter of one half is infinite.
You now have a quarter wave over a ground plane.A well known case."

It means that a dipole fed from a coax is the monopole (a quarter wave) with the counterpoise.

"In the case of very rocky or poorly conducting soil a counterpoise often is substituted for a buried network of wires. A counterpoise is a network of wires place above the earth a slight distance and insulated from it, so arranged to produce a very high capacity to the earth."

So I know now why you all claim that a dipole do not need a ground.

The number of radials is the power dependent. More power radiated more electrons must be taken from a ground.
Do you agree?
S*

Please don't wander off the subject and answer the question!
You did not answer the question why there is no intermodulation
in a transmitter antenna, while you claim it is nonlinear.

Because a dipole does not need a ground, it is a symmetric antenna which
is not driven relative to ground.

Good morning Szczepan.
Here are two questions for you to ponder:
How many radials are needed for a receiving aerial?
Are liquids massless?

Here is something to learn - the monopole and dipole are two different
aerials.

Regards, Ian.

No, you are obviously not here to learn.

No matter what you are told from people who have actually been dealing
with antenna systems from years, your response continues to be babbling
nonsense and quotes from century old literature that has long ago proven
to be false.

> Lately I have learn from Bilou:
> "In such cases it is convenient to put the things to their limits.
> Imagine the diameter of one half is infinite.
> You now have a quarter wave over a ground plane.A well known case."

Babble.

> It means that a dipole fed from a coax is the monopole (a quarter wave) with
> the counterpoise.

No, it doesn not mean that.

> "In the case of very rocky or poorly conducting soil a counterpoise often is
> substituted for a buried network of wires. A counterpoise is a network of
> wires place above the earth a slight distance and insulated from it, so
> arranged to produce a very high capacity to the earth."

This is just a random factoid dealing with a particular situation for
a particular antenna type and NOT true in general.

> So I know now why you all claim that a dipole do not need a ground.

No, you do not know anything.

A dipole does NOT need a ground.

> The number of radials is the power dependent. More power radiated more
> electrons must be taken from a ground.
> Do you agree?

No, this is babbling nonsense.

Radials are only required for an end fed monopole.

The number of radial required is dependant on the ground conductivity and
totally independant of power.

Ask Heaviside.
>
> Here is something to learn - the monopole and dipole are two different aerials.

I did:
"The dipole antenna, which is the basis for most antenna designs, is a balanced component, with equal but opposite voltages and currents applied at its two terminals through a balanced transmission line (or to a coaxial transmission line through a so-called balun)."

The dipole antenna is the two monopoles.

" The vertical antenna, on the other hand, is a monopole antenna. It is typically connected to the inner conductor of a coaxial transmission line (or a matching network); the shield of the transmission line is connected to ground."

If the antenna has the two legs and the one leg is connected to the shield of the coax we have the monopole.

"In this way, the ground (or any large conductive surface) plays the role of the second conductor of a dipole, thereby forming a complete circuit.[3] Since monopole antennas rely on a conductive ground, a so-called grounding structure may be employed to provide a better ground contact to the earth or which itself acts as a ground plane to perform that function regardless of (or in absence of) an actual contact with the earth." From:
http://en.wikipedia.org/wiki/Antenna_(radio)

So: " It means that a dipole fed from a coax is the monopole (a quarter wave) with the counterpoise." is right.
Do you agree?

All is linear in the textbooks (necesary simplification).
In reality all is nonlinear.

""In the case of very rocky or poorly conducting soil a counterpoise often
is substituted for a buried network of wires".

The number of buried radials or that above ground (counterpoise) is power
dependent.
S*

The voltages inside of the computer is DC / not AC.

If he removed the power supply - it would still work on battery power.

So you think the electron emission from your transmitter antenna is
something not in the textbooks but still happening in reality?

That is not a correct way to feed a dipole!
There must be a balun between the coax and the dipole.

To provide a return for the HF current being fed into an unbalanced
vertical.   Not to provide electrons to be emitted.

This is meaningless babble.

While lower level, i.e. grade school textbooks, may contain simplifications,
university level textbooks do not.

I would bet heavily that you have never read any textbook beyond the grade
school level.

>>> Lately I have learn from Bilou:

>
> Do you mean the antenna with the two legs where the one leg is connected to
> the shield of a coax?

There is nothing that requires a dipole to be connected to coax.

In fact many dipoles are connected to balanced line all the way to the
transmitter.

Those that are connected with coax usually have device between the coax
and the dipole to convert from unbalance to balanced.

Again you show you know nothing about antennas or the real world.

>>> The number of radials is the power dependent. More power radiated more

>>> Do you agree?
>>> S*
>>
>> No.
>
> For what are sometime the 120 radials?
> S*

One more time, the number of radials needed for good perfomance for an end fed monopole, and ONLY an end fed monopole, depends ONLY on the ground conductivity.

Dipoles do NOT need radials.

Yagis do NOT need radials.

Loops do not need radials.

Slots do not need radials.

Horns do not need radials.

Rhombics do not need radials.

Stermba curtains do not need radials.

Log-periodics do not need radials.

Helicals do not need radials.

Only end fed monopoles need radials.

No, it is not, it is ground conductivity dependant and has nothing to do
with power and they are ONLY needed for end fed monopoles.

>> Are liquids massless?
>
> Ask Heaviside.

Heaviside has been dead for 87 years, but he did live long enough to
learn that there is no such thing as a massless liquid.

You will never live long enough to understand that.

OK so far.

> The dipole antenna is the two monopoles.

Now you are starting to drift off into la-la land again.

> " The vertical antenna, on the other hand, is a monopole antenna. It is
> typically connected to the inner conductor of a coaxial transmission line
> (or a matching network); the shield of the transmission line is connected to

> ground."

OK again.

> If the antenna has the two legs and the one leg is connected to the shield
> of the coax we have the monopole.

No, you do not.

You glossed right over the part in your own qoute that says: "or to a coaxial
transmission line through a so-called balun".

> "In this way, the ground (or any large conductive surface) plays the role of
> the second conductor of a dipole, thereby forming a complete circuit.[3]
> Since monopole antennas rely on a conductive ground, a so-called grounding
> structure may be employed to provide a better ground contact to the earth or
> which itself acts as a ground plane to perform that function regardless of
> (or in absence of) an actual contact with the earth." From:
> http://en.wikipedia.org/wiki/Antenna_(radio)

And again, you don't get it.

The above quote is talking about end fed monopoles and ONLY end fed
monopoles and has NOTHING to do with dipoles.

> So: " It means that a dipole fed from a coax is the monopole (a quarter
> wave) with the counterpoise." is right.
> Do you agree?

No.

Once again you show you are incapable of reading and understanding your
own quotes.

For a laptop, but not for a computer in general unless you mean a bunch
of batteries for all the various voltages.

OK so far for an end fed monopole and only for an end fed monopole.

> The number of buried radials or that above ground (counterpoise) is power
> dependent.

No, it is not, the number of radial required is dependant on the ground
conductivity and totally independant of power.

There are hundreds of studies that show you are an utter idiot.

An amusing guess and totally wrong.
What happens when the aerial is used with a receive-only station?

Ian.

Tell us which is which. Without your usual nonsense.

I know I'm asking the impossible here, but maybe just this once you could answer a question clearly and directly.

And lipsticked pigs may fly at light speed.

Where can I find the planet potentials?

The dielectric is in the textbooks. In real space is the rare plazma
(conductor).
" Since plasmas contain equal numbers of electrons and ions, they are
electrically neutral overall and thus electric fields play a lesser
dynamical role. Because plasmas are highly conductive, any charge imbalances
are readily neutralised."

"Norwegian explorer and physicist Kristian Birkeland may have been the first
to predict that space is filled with plasma. He wrote in 1913: "It seems to
be a natural consequence of our points of view to assume that the whole of
space is filled with electrons and flying electric ions of all kinds. We
have assumed that each stellar system in evolutions throws off electric
corpuscles into space. It does not seem unreasonable therefore to think that

the greater part of the material masses in the universe is found, not in the
solar systems or nebulae, but in "empty" space."[1]["

And of course there is the real problem. If he claims antennas work by
radiating electrons, why do insulated wires work?

I am going to love this answer.

And so it will have delay related to the transmitted frequency.  So that
part will be predictable.

But you won't have a clue as to how it works, as usual.

He's been posting the same idiotic crap to multiple groups for years now.

I don't think he is a troll, I think he really is that stupid.

Hi
Do you have any links about the relative potential of planets ?
I have always been wondering what would my meter indicate if
connected between an earth and a moon terminals.
On the other hand electrons move quite easily in vacum this was used
in radio not so long ago.
But of course much slowly than electromagnetic waves.

Light (and radio waves) are the oscillatory flow of electrons (L. Lorenz 1869).

Glass, ice and water are insulators.
As you probably know the wires insulated with the water do not work.
It is the   wave lenght dependent.

Oh, that must be why light and radio waves do not pass through glass!

In telegraph wire the electrons travel (as the disturbance) with the speed of light.
The same is in the space. The disturbance always travel with the speed of light.

And all waves transport the mass (medium). In the our case the electrons.

But in medium are aso the winds. The speeds of them is "of course much
slowly than electromagnetic waves."

So in the space are the oscillatory flow of electrons and the electron wind.

Infrared and UV light do not pass through glass.
For infrared you must use the NaCl. And for UV the quartz.
"It is the   wave length dependent."

Yes, but that is because it does not work the way you think it does.

When it was just a matter of flow of electrons, any insulator would
block the waves.  The fact that some waves can pass through an insulator
clearly shows that those waves are not an oscillatory flow of electrons.

As the well-known expression says "it's good for a giggle".
Well, it is well known in the UK.

 We have had some good discussions.

73, Ian.

Sadly, Szczepan is around 25 years too late to be a script writer for a "Carry On" film. We've also lost Stanley Unwin who would doubtless have enjoyed Szczepan's Gobbledygook, not only because Unwin was a comedian but also because he knew a bit about transmitters.

ttfn, Ian.

Szczepan, this news that "Infrared and UV light do not pass through glass"
should be passed to Canon and Nikon and other manufacturers of digital
cameras who fit infrared filters onto their sensors. They do not know that
infrared will not reach the sensor, having been stopped by all the glass in
the lens.
According to Wikipedia, glass is approximately 75% SiO2. Quartz is SiO2.

Regards, Ian.

> According to Wikipedia, glass is approximately 75% SiO2. Quartz is SiO2.

The use of fused quartz for UV and salt for IR is actually
something he is right about.

Ordinary glass only passes a small amount of UV close to the
visual spectrum. Lenses that go far into the ultraviolet

are made using fused quartz and fluorite elements. (This combination gives excellent broadband colour correction so such lenses are also used for near-infrared.)

Ordinary glass passes a fair bit of the IR spectrum but salt passes much longer wave IR than glass does.

Peter.

Electrons and what you call "the disturbance' are completely different
things.
Nothing with a mass can travel at the speed of light.
Even in high vacuum tubes electrons travel much slower than the speed of
light
And this creates lots of problems.
Around an atom of hydrogen the electron travels at less than 1% of the
speed of light.

> Do you have any links about the relative potential of planets ?

I have a book that is still packed from my latest move. The theory is that =
since charged particles from the sun result in an electric current and sinc=
e planets with varying characteristics (distance, size, magnetic field, etc=
, deflect charged particles differently, the charge on varying planets must=
 necessarily be different. Space probes have measured the electric potentia=
l near planets and moons and one has been damaged by the intense electric f=
ields near a moon but not in space. But think about it. Since the electric =
potential is not the same at different points on earth, it is likely imposs=
ible to be a fixed value anywhere else. (There are lightning discharges on =
the surface of Jupiter.)

> On the other hand electrons move quite easily in vacuum this was used
> in radio not so long ago.

Space probes have measured the density of free electrons in space. There ar=
e simply not enough electrons there to call space a conductor. There is som=
ething there, for sure, but it is not conventional matter. Apparently, the =
"aether" consists of dark matter.

The "disturbance", which is a DC transient condition, has been proven by me=
asuring instruments to consist of photons. All AC, RF, and transient (distu=
rbance) DC phenomena (within a telegraph wire) involve photons that are emi=
tted and absorbed by electrons, which act as a sort of bucket brigade for t=
he photons. If something travels at the speed of light in the medium, it ca=
nnot be an electron. A single electron, traveling at the speed of light, wo=
uld collapse the universe.

In a 1 mm telegraph wire carrying 3 amps of DC, an electron travels at a velocity of about one meter per hour. I can walk 3000 times faster than that. It's time to come to grips with electron particles containing mass vs speed of light functions.

I earlier said an electron traveling at the speed of light would collapse "the" universe. I should have said: collapse "its" universe.

Almost all energy is in visible light.
In greenhouse it is reworked into heat. But the warm interior radiate the
infrared. Such can not escape through the glass.
In the result my greenhouse stays hot on a sunny day.

Hello Jeff.

I am now checking the front of my camera lens. Yes - there's a UV filter on it. Wonder why?

Best wishes, Ian.

I heard a good one on the radio the other day. A fellow was describing a dipole and he was feeding it with parallel lines of rg8x to keep it in balance. Then into a tuner.

That did not bother me, but what made my ears perk up is that he cut the dipole either longer or shorter (forgot which) so the SWR was about 2.5 to 3 to 1. By doing this he said the signal to noise ratio was a lot beter on receive.

Or you can turn down the RF gain and accomplish the same thing on receive
but not effect transmit.

Yes they do actually.

You can also put salt water in an insulating glass tube and use it as an
```

antenna.

> It is the   wave lenght dependent.

What is?

> S*
>
>

You did not answer the question. I will restate it.

How can a wire that is completely insulated with respect to electrons
radiate an RF signal?

An additional question.

Since radio waves, according to you, are made up of electrons, how do
radios receive and transmit inside building which are made of insulating
and nonconducting glass and concrete?

tom

I think you missed the point.

USING a SWR meter to tune a antenna does nothing to express resonance.

Dipoles by nature are a 1/2 wavelength or wavelengths in size.

The RG 8X was used as phasing lines - was the tuneable matching network.

Maybe what the person intended to say was that they tuned the antenna for a different frequency / hence at the frequency they desired to use, was a poor match with that antenna.

It stands to reason, if the antenna was not resonant, it would not receive as well at X Mhz.

In communications, we want to receive as much as we can possibly receive, unless what you are trying to do is local communications into the one local repeater - since most public service communications takes place on one frequency or one band of frequencies. Police, Fire, Ambulance etc...

When tropospheric ducting takes place, it is not uncommon to hear others communicating on your frequency, even if they are hundreds of miles away - even on 450 MHz...

Things went well. The "crew" was available the evening before FD and the antenna went up easily. I had 30 feet of 1 1/2" PVC pipe, guyed at every 10 feet. The quad, hung in a diamond configuration, dangled to within a few feet of the ground when the corners were tethered out. We were on the shore of San Diego Bay.

The driven element was cut a little large, so I trimmed about a foot in small increments to bring it in-band. The antenna analyzer said it had a 39 ohm impedance and I got about a 2.1:1 VSWR at the radio (TS-870), whose internal tuner made a match in a second or two.

It performed quite well. 20m screamed all day and into the evening. I had contacts all over the US, including Hawaii off the back of the antenna. I was surprised to hear and work the East Coast well into the night. I got Delaware and South Florida at 1:00 AM Local.

We used N3FJP Field Day Logger 2.6 to collect the contacts. I provided an HP laptop running Windows XP as the server and we had a donated Netgear router at 8' to create a Wi-Fi network. I had a small generator for power and a UPS for the network when the generator needed refueling. I did NOT like staying awake all night babysitting that generator.

The network and the program performed almost perfectly. However, at 10:45 PM, 12 hours in, the server laptop screen went dark   I almost had a heart attack. But then it began to display the screen saver. Aha! As soon as I rubbed the touchpad, the display came back.

Most of our eight stations held the network for the whole 24 hours. A couple of our stations dropped the network once or twice each for unexplained reasons. They were able to reacquire the network and when they did, the program on their machines instantly accessed the logfile on the server and updated their displays, as expected.

One feature of this program is a map display, showing all the US states, Canada and parts of the Caribbean. The map starts out in B&W outline format but the outlines are colored-in, section-by-section as the sections are worked. Neat. I did notice that every minute, all the colors change on two of my computers. I haven't tried all of them -- yet. Is it a bug or an undocumented feature? :-)

"Sal"
(KD6VKW)

In the salt water works only the ULF.
>

No insulators to make a wire that is completely insulated with respect to
electrons. It is the material, thickness and frequency dependent.

>
> An additional question.
>
> Since radio waves, according to you, are made up of electrons, how do
> radios receive and transmit inside building which are made of insulating
> and nonconducting glass and concrete?

Light (and radio waves) are made up of electrons, according to Faraday, L.
Lorentz, Tesla and Dirac.
The conductance is the frequency dependent.
The light travel in the glass fibre but do not travel in a copper wire.

EM waves are older than Tesla and Dirac:
"In the year 1884 Oliver Heaviside selected these four equations, and in conjunction with Willard Gibbs, he put them into modern vector notation. This gives rise to the claim by some scientists that Maxwell's equations are in actual fact Heaviside's equations.
The matter is further confused by the fact that the term 'Maxwell's Equations' is also used to describe a set of eight equations labelled (A) to (H) in Maxwell's 1864 paper A Dynamical Theory of the Electromagnetic Field.
It therefore helps when referring to 'Maxwell's Equations' to specify whether we are talking about the original eight equations or the modified 'Heaviside Four'.

Gauss's Law is the only equation that appears in both sets, however the Maxwell/Amp�re equation in the 'Heaviside Four' is an amalgamation of two equations in the original eight." From:
http://users.aims.ac.za/~franckm/Maxwell's_equations.html

The Heaviside's EM is usefull for the near-field.

The "far-field" is the oscillatory flow of electrons.

Faraday, L. Lorentz, Tesla and Dirac were ignorant?

S*.

Hello Szczepan. Please explain, in your own words, to help me understand
what you are trying to say, the meaning of
"near-field",
"far-field" and
"oscillatory flow of electrons". No quoting from web pages or books.

Kindest regards, Ian.
```

>and "oscillatory flow of electrons". No quoting from web pages or books.

In 1867 Lorenz wrote: " Ludvig Valentin Lorenz, "On the identity of the
vibrations of light with
electrical currents," Philosophical Magazine, Vol. 34, 1867, p. 287-301"

http://books.google.pl/books?id=caJdQfAKHtMC&hl=pl&pg=RA1-
PA287#v=onepage&q&f=false

On p. 301 he wrote:
"The present general opinion regards light as consisting of backward and
forward motions of particles of aether."
If this were the case the electrical current would be the progressive motion
of the aether in the direction of the electrical current."

In today's words: "Light is the oscillatory flow of electrons".

Each wave is the oscillatory flow:
"Stokes drift may occur in all instances of oscillatory flow which are
inhomogeneous in space."
From: http://en.wikipedia.org/wiki/Stokes_drift

The " backward and forward motions of particles" are always not simmetric.
The forward is always stronger.

Hello Szczepan .
I see you aren't able to explain "oscillatory flow of electrons" in your
own words.

With " backward and forward motions of particles" I would have asked "backwards and forwards relative to what" but I suspect that you can't explain this in your own words.

The aether drift theory was disproven in 1905 (as published by
Michelson and Morley):
<http://en.wikipedia.org/wiki/Michelson-Morley_experiment>
<http://en.wikipedia.org/wiki/Luminiferous_aether>
Please try to keep up to date:
<http://en.wikipedia.org/wiki/Timeline_of_luminiferous_aether>

Actually, Jeff, I don't think it was disproven. In what world do you
maintain that lack of evidence is proof of non-existance?

(By the way, I'm on their side.)

Oops. The 1905 date should be 1887.

>Actually, Jeff, I don't think it was disproven. In what world do you
>maintain that lack of evidence is proof of non-existance?

Yeah, I know. Absense of proof is not proof of absensce. At the
time, it was much like dark matter. There's plenty of evidence to
suggest that it might exist, but no experimental proof.

Many scientists have produced results both postive and "lack of

evidence" for the aether drift along the way. Michelson Morley was
the first reproducable test that failed to show the existence of a
luminiferous aether wind, thus suggesting that it might be rubbish.

>(By the way, I'm on their side.)

Plenty of sides to choose from. Today, the consensus is that there is
no aether wind:
<http://en.wikipedia.org/wiki/Timeline_of_luminiferous_aether>
However, if it did exist, it might help explain why I can hear a DX
station, but they never seem to hear me. Asymmetrical skip perhaps?
My signal goes easier or farther downwind?

It is not a lack of evidence.

It is that the abudant evidence does not support the existance of an aether.

A loop antenna reduces one type of noise considerably compared to a dipole, i.e.
precipitation static which is unrelated to EM far-field signals.

If you ground your dipole properly, you have no static.

If you ground your dipole properly, you have less static.
Commercial dipole antennas also are shielded for that reason.
Ever seen one?

w.

I was referring more to small loops used for receiving. Not large
loops.. It's mostly in the case of small loops that many claim a
shielded loop is "quieter" than an unshielded loop. I still consider
that claim as pure hogwash...

This is not the same as the full size horizontal loops you are using
on 75m. But.. Even in this case, the loop is not any "quieter" than
the dipole. Like I said before, and you've had verified by the other
guy, it's the pattern that changes, and may receive less signal at
certain heights or angles. There is no "immunity" to noise. It's just
that the change in pattern has less gain at the lower angles than the
usual dipole at the same height.
As you have noted with your conversions with the other guy...
If the noise were from overhead, as in lightning 200 miles away, the
noise of which goes up, and reflected right back down like any other
signal, the loop would be the noisiest, by about a 1/2 db.

If you model a 80m dipole at 30 feet, the gain at 5 degrees is -10.49
dbi according to the plot I'm looking at in eznec.

If you model an 80m full size horizontal loop at 30 feet, the gain at the same 5 degrees is -12.72 dbi. So.. about 2 db or so, which happens to be the appx gain the loop has over a dipole in free space.

So, if you have a noise source on the horizon at 5 degrees, you can expect it to be a good 2 db down on the loop. But even 2 db is not all that much. Usually less than an S meter on most receivers, but could vary. So on paper, the signals at low elevations should be down on the loop, but not hugely so.

The only difference in the pattern between the two antennas is the dipoles pattern is a little more squat than the one from the loop.

The loop has a tighter beamwidth than the dipole.

At 90 degrees, "straight up" there is only about .4 db difference between the two antennas. "8.82 dbi vs 8.41 dbi" That's hardly enough difference to see on a meter. And one reason why I came to the conclusion the loops were not worth the extra work and wire..

But I'm not trying to reduce signals from low elevations..

If you raised both antennas to 50 feet, the gain at 5 degrees with the dipole would slightly increase.

With the horizontal loop at 50 ft, the gain at 5 degrees will be even less than at 30 ft. I wasn't really expecting that, but that's what the plots are showing.

Both are very good at NVIS paths. BTW, both are using the same "medium ground" qualities in eznec.

The best way to see the difference in pattern is modeling them.

This is the elevation plot of the 80m dipole at 30 ft.

http://home.comcast.net/~nm5k/80dipole.jpg

This is the 80m horizontal loop at 30 ft.

http://home.comcast.net/~nm5k/80horloop.jpg

Both were made using the eznec demo.

http://www.eznec.com/demoinfo.htm

>
> So in finishing up, a horizontal loop probably offers little noise immunity when operated in the countryside where you have no nearby sources of interference. It offers a lot of noise suppression when operated in the city or suburban areas.
>
> Michael

One problem is calling it noise immunity. When one says a loop is immune to noise, it *is* a myth.

If an antenna were immune to noise, it would be immune to all signals. Would be a fairly useless piece of hardware.

If you point a loop towards noise, it will pick it up just as well as any other antenna, if the gain at a certain angle were equal or greater than another antenna.

Saying it has less gain at a certain lower angle is more accurate in your case. And that gain at low angles will increase as you raise the antenna off the ground.

BTW, 300 miles is about average for 80 in the day, dipole or
loop.. And your loop couldn't be too awful bad at the somewhat
lower angles, or your contacts to CA wouldn't pan out too well.
That is one handy thing about the eznec program. You can use the
mouse and place the green angle indicator at any angle, and see
what the gain will be. You can see on both of those plots I
set it for 5 degrees. The "DBmax" is the level compared to the
gain at it's maximum angle, which in both of these cases, is straight
up.

I'm in the city of Houston, not out in the country. And I never
noticed the horizontal loop to receive much less local noise
than the dipoles or turnstiles I have used.
But generally, I don't have bad noise that would overpower
the usual atmospheric noise on 80m at night.

Ooops.. That is generally the case, but as earlier mentioned, I
actually saw less gain at 5 degrees with the hor loop at 50 ft,
than I did with it at 30 ft.. Which would likely help with
reducing your local noise. I don't know how high yours is..
But the dipole gain at low angles did increase with height
above ground.

Don't forget the effects of polarization. At my previous QTH, my horizontal dipole
was about 2 S-units less noisy than my vertical even when communicating with
remote vertical antennas.

(snip)
     ISTR with my portable shielded loop, when its horizontal, its omni;
when its vertical, max received signal is when the edge is pointing to
the tx. The null happens when the plane of the loop is at right angles to
a line to the tx.

I'm not. I'm just trying to show that an antenna can't tell what
is noise, and what is an actual desired signal. To the antenna,
they are both the same. RF.. One can not magically filter noise,
without filtering the actual signals along with it.
This applies more to the small receiving loop, comparing shielded
to non shielded, but also would apply in most any other case.
I'm fairly comfortable saying the claims of reduced noise pickup
with shielded loops is a myth. I've compared them, and I saw no
difference here. And that includes the usual far field signals,
but also closer local noise, such as monitor noise from the shack,
etc..
I never saw any difference with that type of local noise either.
Both types picked it up equally well if it was there.
And both types could null it out equally well, if from a single
source.

Say, you have interference with a local origin and a signal with
a remote origin, wouldn't it be possible to tell the two apart?

E.g. by using two antennas.  The received signal is the same on
both antennas but the noise is different.  This can be used to
cancel out the local noise but keep the remote signal.  Phasing boxes
that operate on this principle are commercially available, so maybe
it is possible.

Sure, but that's a whole different thing entirely.
That's nothing to do with the antennas themselves.

But once you move a bit further away and consider the two antennas
and phasingbox together as a single antenna, it suddenly is capable
of telling apart local noise and distant signal. That is promising.

As I said above, I am not talking about atmospheric noise. I am suppressing the local noise generated in my community by various electrical and electronic devices. These are close enough to arrive where I live from an extremely low angle. This low angle is exactly what my loop "magically" nulls out.

I understand now that when I use it at multiple wavelengths that it no longer behaves as it does where it is a single wavelength on 75 meters.

All the contrarians keep citing atmospheric noise cannot be suppressed with a loop. Please read my post above more carefully. I do not make that claim. If you read carefully you will see that I am trying to suppress ".... So, any signals from nearby homes, power lines, and industry are received by me at this very low angle of radiation....."

Now if you are claiming this does not work, then say so rather than talking about atmospheric noise.

Those of us who live in a suburban area bombarded with local noise know very well which antenna will be more quiet. At least those who have tried a loop. I suppose there are some suburban areas without noise. I have not lived in one.

I always prefer empirical evidence over theoretical postulates. Those who prefer to defer to a theory over evidence are welcome to do so. I like to use what actually works.

There appears to be an anti-loop antenna feeling among some people. I have no such innate prejudice against most antennas. I have tried various types of antennas and use what works best where I live. I found the random wire antenna and the G5RV to be the worst performing of all antennas I have tried. If I had no room for a loop, I would use a folded dipole. After that, I would use a simple 1/2 wave dipole. I have tried the double bazooka but found it only marginally wider in bandwidth than a dipole and heavier and more difficult to support.

I do admit that I find the wide spread acceptance of the G5RV by new hams to be a mistake. I certainly understand why they might originally chose this antenna. It claims operation from 75 meters to 10 with just a 102 foot length. This is an attractive specification, but comes with a serious performance cost.

Michael

I see little if any chatter about atmospheric noise.
The only mention I've made of it was to say if the noise is
from overhead, the horizontal loop will receive it very well.
As will a dipole, turnstile, and many other antennas.

>

Also the height above ground in wavelength should be considered.

I've already stated two or three times that it's the pattern
that causes what you see. I never said it didn't work.
In fact, I showed in the model that 2 db would be fairly easy to
come by. Maybe more, if you raised the loop to 50 ft.
All you are doing is continuing to show I was correct as far as my
initial guess for the reason. I said it was almost surely the pattern
from the first post. You seem to be intent on proving me right.. :/
OK, I give up. You win. I concede I was right from the first guess.. :|

I know what you are doing works for the noise you are trying to reduce.
But it's working for a different reason that some *others* propose,
usually when discussing small loops.
Like I say, the noise issue I harp on is more often discussed when
talking about small receiving loops, not full size loops.
It's a bit different issue than what you see with a full size
horizontal loop on 75m.

>

There are no absolutes.. It depends on the noise source, polarity,
direction, etc.
If I have noise, it's usually line noise from the power lines.
There could be cases where the dipole received less of that noise
if the orientation was just right.

>
> I always prefer empirical evidence over theoretical postulates. Those

As do I. And I've tried the loops, believe me.. When it comes to 75m,
I've pretty much tried everything trying to get the very last drop of
performance to NVIS paths. 160, 80 and 40 is where I've always spent
most of my time.

I have no problems with a loop. I just have a problem with saying they
receive less noise for the wrong reasons.
Note the title of this thread. It's mainly about small receiving loops,
and the title infers that they may offer noise suppression if you use a
shielded loop vs an unshielded loop.
I consider that hogwash. All the shielded version offers is a better
chance of it being balanced. But it's quite easy to build an unshielded
loop that is balanced. If both are balanced, both will perform the same
assuming the same size loop.

The double bazooka actually has more loss than a plain wire dipole.
It's the loss that increases the bandwidth.

The G5RV can be OK if fed properly. Straight ladder line would
work much better than the usual coax/choke/ladder line that many
use. It's the silly feed systems they use that kill the performance.
It's that coax/choke/ladder line feed config that kills the performance
of most of the commercial windoms also.
If I ran a G5RV, or any other single dipole for multi band use,
I'd feed with ladder line the whole way from the rig to the antenna.

I have no idea how to ground a dipole and I don't think I've ever done it
except by accident.

I welcome any direction. (Having just read the foregoing, I have not
searched the Internet, yet.)

The G5RV is not a miracle antenna. However, those who find that it does

```
not perform fairly well probably have not bothered to find out why it is
like it is, and where the radiation goes on the various amateur bands.
If they don't want an antenna with a radiation pattern like the G5RV,
then they should choose a different type of antenna.

Apparently, you have never had P-static problems with your dipoles. I, however,
had a coax connector start arcing in the middle of the night and it sounded like a
machine gun.

A G5RV is a good performer on 75m, 40m, 20m, and 12m. Here's why on 75m and 40m.

Hi Cecil,

I've moved off the loop and noise suppression thread and over here because I'd like to consider an idea, and get yours and other opinions on the matter of adjusting the 300 ohm feeder length on the G5RV.

On your G5RV page http://www.w5dxp.com/G5RV.HTM
you state that if some method is devised to vary the length of the 300 ohm series matching section it could be made to work well on all bands.

I was wondering about using a Lecher Wire Feeder in the shack. It would be fed from the rig by some 50 ohm coax, and then used as the beginning of the300 line feeder, the remainder would run out the window and up to the antenna.
.
This would allow quick and easy of adjustment of optimum length for each band. For me, using 34 feet on 40M, and 23 feet on 10M, an 11 or 12 foot lecher setup would do the trick.

I have seen your switched twin-lead arrangement and it is still under consideration.

A couple of questions (which may give rise to more....)

1. How much radiation would I find in proximity to the lecher feeder and 300 ohm twin lead. Purely a health consideration It will not affect me as

(1) I have worked
around a lot of RF in my times -- as a tech at navy broadcast trasmitting sites, on Heavy Radars (Pinetree Line stuff), on shipboard trasmitting equipment, and 50 plus years of ham radio: and
(2) I only run 5W maximum
(if I'm lucky -- FT-817ND), and
(3) I've already lost most of my hair, and

(4) According to family opinion I lost it all (and I'm not talking hair) manyyears ago and am easily certifiable now!

Is there a cure for Ham Radio RF overexposure?

2. How much variation in length could I get away with if I wanted to use a shorter lecher system, or would I get significant i.e. noticeable benefit by going to the optimum length for each band? I only operate non-WARC. I would happy restrict myself to the 80, 40 and 20M bands, and could drop 40 if the economics and physical reality make it worthwhile in terms of complexity and cost vs output.

3. How far from your operating position is your feedline/switching arrangement? Have you noticed any hair loss since implimenting the system?

I am currently in a situation where an all-band dipole is out of the question physically, and I think that if it turns out worthwhile, I could set up a G5RV if I fudge a bit by bending the legs a bit here and there, I don't care about pattern, I just want to get a signal out where someone will hear it (hopefully).

I would have looked up Smith Chart except that I didn't even know how to spell Smith!

Thank you Cecil and any others who care to contribute toward this thread

Irv VE6BP

Please explain further. Lecher wires usually require a short between the tw=
o wires and we don't want that. What we need is a way to stretch or shrink =
the length of the wires, a pair of conductive bungee cords perhaps?
=20
> I have seen your switched twin-lead arrangement and it
> is still under consideration.

I've tried other configurations like parallel mobile telescoping antennas a=
nd copper rods that slip in and out of copper tubing. The switches take no =
more time than adjusting a tuner and could be automated with a microcompute=
r and relays.
=20
> 1. How much radiation would I find in proximity to the
> lecher feeder and 300 ohm twin lead.  Purely a health
> consideration.

Unless the power levels are very high, IMO, a tempest in a teapot. I rememb=
er when 11m diathermy machines were all the rage. Balanced transmission lin=
e fields tend to cancel a few inches from the wires. I wouldn't grab them -=
 just keep your body organs a foot or so away. I doubt that the RF fields c=
an hurt your hands but that's just my opinion. I've been around RF for 60 y=
ears with no ill effects that I am aware of. Of course, RF exposure could b=
e the cause of me being unaware.:)

> Is there a cure for Ham Radio RF overexposure?

It is non-ionizing radiation so most of what to worry about is burning. I'm=
 sure you have burned RF holes in your fingers before. I once burned a hole=
 in my lip from a "hot" metal microphone - still have the scar. I wasn't us=
ing a balun on a coax-fed dipole.:)
=20
> 2. How much variation  in length could I get away
> with if I wanted to use a shorter lecher system, or would
> I get significant i.e. noticeable benefit by going to the optimum length
> for each band?

I still don't understand exactly what you have in mind. If you move taps up=
 and down a Lecher line, you will be leaving an *open circuit stub* attache=
d which will introduce capacitance into the configuration. That capacitance=
 will change the impedance to other than the expected value making it hard =
to locate a purely resistive current maximum point.
=20
> 3. How far from your operating position is your
> feedline/switching arrangement?  Have you noticed
> any hair loss since implimenting the system?

:) I've lost some hair but I am not nearly as bald as my father who was not=
 a ham. My switches were mounted on a piece of plexiglass in a window withi=
n reach of my operating position. The switches were on the inside and the l=
oops of ladder-line were on the outside. There's a picture of the plexiglas=
s panel on my web page.
=20
> I could set up a G5RV if I fudge a bit

I was once working on a magazine article describing a relay switched all-HF=
-band G5RV. Someone else said he had submitted such an article for publicat=
ion so I stopped working on it. I don't remember who it was and have never =
seen such an article. If one forgoes 30m, the parallel section only needs t=
o be switched between 28' and 38'. I guess I should go back and complete th=
at magazine article. I could envision 10' of copper rod slipping in and out=
 of 10' of copper tubing and controlled from the operating position, someth=
ing like a screwdriver mobile antenna.

Subject: Re: Cecil et al -- Using A Lecher Line with a G5RV

Please explain further. Lecher wires usually require a short between the two wires and we don't want that. What we need is a way to stretch or shrink the length of the wires, a pair of conductive bungee cords perhaps?

I envisioned a pair of reasonably close spaced conductors (like open wire line) and no short -- in other words it would
be used with a sliding tap on each side to control the length -- thus simulating a variable length for the 300 ohm feeder.

> 1. How much radiation would I find in proximity to the
> lecher feeder and 300 ohm twin lead. Purely a health
> consideration.

Unless the power levels are very high, IMO, a tempest in a teapot. I remember when 11m diathermy machines were all the rage. Balanced transmission line fields tend to cancel a few inches from the wires. I wouldn't grab them - just keep your body organs a foot or so away. I doubt that the RF fields can hurt your hands but that's just my opinion. I've been around RF for 60 years with no ill effects that I am aware of. Of course, RF exposure could be the cause of me being unaware.:)

> 2. How much variation in length could I get away
> with if I wanted to use a shorter lecher system, or would

> I get significant i.e. noticeable benefit by going to the optimum length
> for each band?

I still don't understand exactly what you have in mind. If you move taps up and down a Lecher line, you will be leaving an *open circuit stub* attached which will introduce capacitance into the configuration. That capacitance will change the impedance to other than the expected value making it hard to locate a purely resistive current maximum point.

What I mean is, for example, say the optimum length for the feedline on 80M is 32 ft, on 40M 34 ft. and on 20M 33 ft. If I were to use the average 33 ft. and operate only on those three bands would I notice any significant difference -- would it make much difference in my signal at the receiving operators shack? 99.9% of my operations over the years have been on those three bands, and if I didn't have to adjust the feedline length I could save a lot of time and trouble. When I had my house, and was in fitter condition, I could afford the effort to experiment, but now I am somewhat disabled and what was once fun (the experimenting) is now pretty much out of the question.

> 3. How far from your operating position is your
> feedline/switching arrangement? Have you noticed
> any hair loss since implimenting the system?

:) I've lost some hair but I am not nearly as bald as my father who was not a ham. My switches were mounted on a piece of plexiglass in a window within reach of my operating position. The switches were on the inside and the loops of ladder-line were on the outside. There's a picture of the plexiglass panel on my web page.

Within reach of the operating position makes the switching arrangement quite viable, especially running QRP. Maybe I'll go that way -- even a 10 ft or 11 ft lecher wire (unshorted, of course) would be far more awkward.

> I could set up a G5RV if I fudge a bit

I was once working on a magazine article describing a relay switched all-HF-band G5RV. Someone else said he had submitted such an article for publication so I stopped working on it. I don't remember who it was and have never seen such an article. If one forgoes 30m, the parallel section only needs to be switched between 28' and 38'. I guess I should go back and complete that magazine article. I could envision 10' of copper rod slipping in and out of 10' of copper tubing and controlled from the operating position, something like a screwdriver mobile antenna.

I've never seen an article of the sort myself, and I spent a lot of time perusing antenna articles in the various ham radio magazines. If I had, I'm pretty sure I'd remember it, even with my increasing 'senior memory moments'!

Thanks for your reply Cecil -- as soon as I press the 'SEND' button I'll be off to your site where I've been many times.

Nonsuch, Cecil, unless it's been an off-again-on-again problem that I simply never appreciated for its affect on my QSOs.

With Field Day coming and my being the Field Day Chairman for the local club (www.sobars.org), as well as our President, any diddling with my home QTH dipoles must wait.

I am taking an unproven design for a 20m Cubical quad to FD. By EZNEC, it looks good but it wants a 75-ohm feed, which I am prepared to provide. I have a choked cable ready to go.

In your opinion, is there a ground required? At the antenna or at my van? Both? I own some ground rods and a sledgehammer.

(Last year, I used a 20m dipole at 30 feet, operating out of my van. Everything floated above ground without incident and many QSOs.)

I value your opiniion.

In Marconi opinion:
http://www.nobelprize.org/nobel_prizes/physics/laureates/1909/marconi-lecture.pdf

"By "connected to earth" I do not necessarily mean an ordinary metallic
connection as used for ordinary wire telegraphs.
The earth wire may have a condenser in series with it, or it may be
connected to what is really equivalent, a capacity area placed close to the
surface
of the ground (Fig. 4).
It is now perfectly well known that a condenser, if large enough, does not
prevent the passage of high frequency oscillations, and therefore in these
cases
the earth is for all practical purposes connected to the antennae."

And Wiki:
"The use of the term ground (or earth) is so common in electrical and
electronics applications that circuits in portable electronic devices such
as cell phones and media players as well as circuits in vehicles such as
ships, aircraft, and spacecraft may be spoken of as having a "ground"
connection without any actual connection to the Earth. This is usually a
large conductor attached to one side of the power supply (such as the
"ground plane" on a printed circuit board) which serves as the common return
path for current from many different components in the circuit." From:
http://en.wikipedia.org/wiki/Ground_(electricity)

As I explained in my last posting, that won't work as expected because it l=
eaves an open-circuit stub in the circuit. I previously tried just shorting=
 out a loop to decrease the length. It didn't work because it created a rea=
ctive stub.

My 20m rotatable dipole works that way with the internal autotuner on my IC=
-756PRO. With ~70' of 300 ohm ladder-line, the tuner will find a match on 2=
0m, 17m, 12m, and 10m. I was never lucky enough to achieve a satisfactory S=
WR on more than two bands without a tuner. However, there are certain combi=
nations of dipole length and feedline that work on multiple bands. The ZS6B=
KW antenna with a dipole length of 90' and a ladder-line length of 40' is s=
aid to work without a tuner on 5 HF bands if one is lucky.

Here's a DOS-based program that I wrote that locates the current maximum po=
ints on a transmission line. It runs under XP but DOSBox is needed for late=
r versions of Windows.

http://www.w5dxp.com/IMAXGRAF.EXE

The accompanying article is:

http://www.w5dxp.com/goodbad.htm

P.S. Two weeks ago at a neighbor boy's birthday party, I spent about three =
hours in the hot Texas sun playing on a large water slide and I am still pa=
ying for it.:(But if I die, I'll die happy.

What is your point is (other than demonstrating copy-and-paste)? If it is
that "all aerials require an earth" then you're clearly ignoring previous
postings which have said that this is not the case.
The Wiki item doesn't seem to appreciate the difference between a return
```

path on a circuit board and a connection to earth.

Regards, Ian.

And he changes his argument again. Because now the electrons cannot
flow to ground. Which blows his whole "antennas radiate electrons"
argument.

Troll or moron? You decide.

tom

All time the electrons flow to or from the ground.
"Let me answer some of your questions. Capacitors loose their charge both
through the insulation between the plates and through the air surrounding
the capacitor. The charge is a surplus of electrons on one plate and a
rarefaction of electrons on the other. Where the electrons are compacted
(the negative plate) the electrons tend to push each other off. Where there
is a deficit of electrons (the positive plate) electrons are attracted from
other sources - air, the positive plate. Both of these actions tend to
decrease the potential difference between the plates... to discharge the
capacitor. From: http://www.newton.dep.anl.gov/askasci/phy00/phy00900.htm

> Troll or moron? You decide.

" Variable capacitors with their plates open to the atmosphere were commonly
used in radio tuning circuits."
If you have such try to measure "the Capacitor charge holding" and decide.

Let's disregard the spelling error ("loose" and "lose").
The article continues thus:

"How can this be discouraged? There are a number of possibilities, but they
are selectively employed due to practical and economic reasons. Two possible
methods - Increase the distance between the plates or change the material

separating the plates. For instance glass insulators are sometimes used on very large (tall as a house) capacitors or the capacitor may be packed in oil. "

Anyone seen a capacitor that is as big as a house?

< snip >

"Often one wants a capacitor to have the largest possible capacitance. This is accomplished by making the plates large in area and close together and filling the space between the plates with an insulator which has a large dielectric constant. A parallel plate capacitor has a capacitance given by C = eA/d, where e is the dielectric constant, A is the area of the plates and d is the separation between the plates. Notice that making the area large and the separation small makes it easier for a current to flow between the plates, thereby discharging them. For many purposes the small leakage current is not a serious problem. Often a large value of capacitance is much more important than a slow discharge. Notice that even with air between the plates, cosmic rays will occasionally pass through the capacitor, ionizing the air and thereby discharging the capacitor slightly."

Note the statement "makes it easier for a current to flow between the plates". That's "between the plates" and not "flow to earth".

< snip >

"It is true, most capacitors tend to self-discharge about 50% in something like 15 minutes."
That's "self-discharge" and not "discharge to earth".

For a detailed discussion of electrons, why not try posting on one
of the Physics or Science newsgroups?

Regards, Ian.

Hi folks.

Apologies for my long posting a few minutes ago. I do not like selective quotes but I forgot that Szczepan only understands copy-and-paste.
Of course, we all kn ow that copy-and-paste is merely the movement of electrons flying in tight formation.

Please excuse my tryping terrors - they are merely the random movement of heavy electrons hitting the keys on my keyboard. It's worst for me when one falls off the keyboard and lands on my foot.

73, Ian.

A valid statement but you have no clue what it is talking about or what any of it means in the real world.

It has nothing to do with what is being discussed.

> " Variable capacitors with their plates open to the atmosphere were commonly
> used in radio tuning circuits."

Again, a valid statement but you have no clue what it is talking about or what any of it means in the real world.

It has nothing to do with what is being discussed.

> If you have such try to measure "the Capacitor charge holding" and decide.

This is just babble.

You are an idiot.

They know what the electrons are.

Hello Szczepan.

No, the earth doesn't act as a surface of a capacitor. Capacitors will
self-discharge even when they aren't connected to any circuit.

Might be worth trying a standard electric fence generator. These put in a pulse of a few 10,s of kv(as far as I know)
Probably pick it up as a 'click" on a standard AM/FM reciever. These blokes could maybe suggest a better antenna. Just make sure you if you need a leak you dont use the fence post!!!!!.

My answer was to Sal. He wrote: "(Last year, I  used a 20m dipole at 30
feet, operating out of my van.
Everything floated above ground without incident and many QSOs.)"

The floor of the van is the plate and the surface of the Earth is the second
plate.

Thanks, Szczepan . That made me smile. I'm sure you will find sites on the
web that will help you to understand capacitors.

Have a nice day. Ian.

How about the capacitors and antennas on Voyager I and II which are still operating at the edge of the solar system?

Hello Cecil. Do you suppose that we can regard Uranus or Pluto as a
replacement Earth?
Pity they didn't want a volunteer to be the crew of a Voyager. We could have
suggested someone ...

73, Ian.

Just as a mental exercise, assume that the entire setup...van and antenna,
is transported to a place in space where there is negligible capacitance to
the earth.

Is it your contention that the setup would operate any differently?

Hello Szczepan.
Please try to take note of earlier postings. A dipole is a balanced aerial
and works without reference to earth.
Regards, Ian.

The Earth is in the space and the entire setup also.
The both need "neutralization" like the space-vehicle:
"Other proposed applications of large-area field emission sources[39]
include microwave generation, space-vehicle neutralization"
From: http://en.wikipedia.org/wiki/Field_electron_emission

" Where the electrons are compacted the electrons tend to push each other
off. Where there
is a deficit of electrons, electrons are attracted from other sources".

In space is the Solar wind (ions and electrons).

To continue quoting from the Wiki article: ' In these devices, a high
density of individual field emission sites is created on a substrate
(originally silicon). This research area became known, first as "vacuum
microelectronics", now as "vacuum nanoelectronics" '.
Micro/nanoelectronics? I think we've discussed ths before on this newsgroup.
Is Szczepan saying that we need to earth the Earth? Doesn't that short out
everything?
I'd rate this thread "Four stars out of five. Highly entertaining and
amusing. I await the sequel".
Perhaps we've already had the sequel - was it Archimedes who said "Give me a
place to stand and with a lever I will move the whole world". I guess that
Szczepan would agree with that one.

Regards to all, Ian.

You see the Voyager I and II use their metal structure as one plate of a capacitor connecting to earth. The space between is the dielectric, just like the floor of the van. Some day when Voyager I passes another solar system, The space between earth and Voyager making up the dielectric will be light years wide. Without earth there could be no radio communications anywhere else in the universe.

Plato, the Greek scientist stated very clearly that the earth was the centre of the universe. Cecil, surely you would not presume to question the works of a great scientist like Plato.

Michael

No, Marconi was NOT correct in general and Marconi was talking about
single-ended antennas, not static build up or dipoles or loop antennas
or anything else invented the the 75 years since he died.

Marconi's remarks about antenna ground apply only to antennas working
against the Earth, e.g. a vertical antenna with no ground plane.

# The Earth is in the space and the entire setup also.
# The both need "neutralization" like the space-vehicle:
#  "Other proposed applications of large-area field emission sources[39]
# include microwave generation, space-vehicle neutralization"
# From: http://en.wikipedia.org/wiki/Field_electron_emission
#
# " Where the electrons are compacted  the electrons tend to push each other
# off. Where there
# is a deficit of electrons, electrons are attracted from other sources".
#
# In space is the Solar wind (ions and electrons).
# S*

And if the van/antenna had been constructed on another planet before being
sent into space, is the earth still required or just the other planet?

That sounds nice and I've considered it, too. In the early days, I didn't know nuthin' about nuthin', so going with the club was absolutely the best thing for me. Now, twenty years on, I can do whatever I want (within budget) and it'll probably work out.

I will say, however, that the field day experience does provide an opportunity to try new things that I might otherwise not attempt. Putting up a 20m quad is best done by a crew.

```

I understand the Maxwell's and the Heaviside's. What are you asking about?

> (It's just this kind of stuff that prompted my previous post) I take it

> theory.

Father's of the radio also.
Maxwell's model was discarded by Royal Society and the Heaviside's was done
after the fundamental experimments.
Radio waves and light are the oscillatory flow of electrons (L. Lorenz
1869).

plain wrong."

Could you give as the correct explanation?

Hello Szczepan.

We've tried to assist you but you seem to prefer to stay with 19th century
knowledge rather than learn modern knowledge. If you ask for help and don't
accept the answers you get then there's not a lot we can do ... other than
disregard your postings and go and operate our radio stations.

You need to get a modern textbook on radio theory. One suitable for amateur
radio should be okay. Have a look at www.rsgb.org.and www.arrl.org

Kindest regards,  Ian.

So you are saying that cases 1 & 2 above are essentially equvalent if the
loops are balanced. In terms of noise rejection, there is no analogy to be
drawn between a shielded loop and a shielded cable.

First don't get to hung up on ingredients look at what it becomes after the reaction which is polyester.

If you need the part to have adhesion or be structural or just stronger you could thicken epoxy resin with talc, chalk, glass micro balloons, silica, chopped glass fiber.

The sun is not nice to unfinished-unprotected polyesters or epoxides So you should consider the RF properties of what ever you will use to protect the part from UV.

The parts you bought are still made of the same type material so you still need to consider protecting them where you have machined away the outer layer.

Regarding the ingredients:

2,2'-OXYBIS[ETHANOL] is a reactant not a solvent (and not ethanol)

1,3-ISOBENZOFURANDIONE and 2,5-FURANDIONE are organic acid anhydrides.

Styrene monomer is styrene (AKA vinyl benzene or phenyl ethene).

The talc and chalk minerals are to thicken the mixture and make sanding shaping the hardened piece easier.

Most paints are insulative or at least non-conductive and should be fine.

The filler should be fine also.

In 1846 Faraday wrote: "It seems to me, that the resultant of two or more
lines of force is in an apt condition for that action which may be
considered as equivalent to a lateral vibration; whereas a uniform medium,
like the aether, does not appear apt, or more apt than air or water."
http://www.padrak.com/ine/FARADAY1.html

>rather than learn modern knowledge.

In 1929 Tesla wrote: " On repeating the Hertz experiments with much improved
and very powerful apparatus, I satisfied myself that what he had observed

was nothing else but effects of longitudinal waves in a gaseous medium, that
is to say, waves, propagated by alternate compression and expansion. He had
observed waves in the ether much of the nature of sound waves in the air."
http://www.tfcbooks.com/tesla/1929-09-22.htm

>If you ask for help and don't accept the answers you get then there's not a
>lot we can do ... other than disregard your postings and go and operate our

It depends on the individual amateur, doesn't it. That's why we experiment,
write articles, read textbooks and discuss and debate theory and practise.

Lorenz (and all other physicists and mathematicians) were obviously ignoran=
t of photons in those days. Here is what a more knowledgeable physicist has=
 said more than a century later:

Quoted from: "The Strange Theory of Light and Matter", (c)1985, by Richard =
P. Feynman

"So now, I present to you the three basic actions, from which all the pheno=
mena of light and electrons arise:

-Action #1: A photon goes from place to place.
-Action #2: An electron goes from place to place.
-Action #3: An electron emits or absorbs a photon."

When Feynman says "light", he is including RF. Photons travel at the speed =
of light in the medium which is impossible for electrons which possess rest=
 mass. There are no electrons in a pure vacuum, yet light and radio waves p=
ass through it at the speed of light with no problem.

Following your "logic", why go back to 1869? Why not question the periodic =
table of elements because a few millennia ago, men of science asserted that=
 there are four elements: earth, air, fire, and water. So why not adopt the=
 four element argument as well?

Cecil,

I think our Polish friend here is just a troll trying to get attention.

It is a complete waste of time reading his posts, just put him on your kill list.

In the end for almost all amateur radio operators it does not matter one wit how an antenna works. It most certainly matters if it works and how well.

I have used a 75 meter loop antenna here where I live for the past 5
years. It works very well. I live right in town on a lot surrounded by
other homes. I started with a dipole but was advised that a loop would
hear less noise. It turned out to be quite true. I am now a convert to
the loop antenna. Have no idea of the physics of how it works, but it
sure does work well on bands between 75 and 20 meters. It actually seems
to work best on 40 meters.

I don't care about electrons or the names of past pioneers in radio. I
mean no offence to them, I just have moved on since being a child
studying radio.

Michael

El 15-06-12 16:09, garyr escribi�:

>> I agree with your second link (by VK1OD).
>>
>> The time varying magnetic field generates an electric field and that is
>> received by the loop.   When you screen it completely, it doesn't work,
>> you need the gap.

>>
>> By placing the gap opposite to the feed point, you get a balanced loop without the need of ferrite or other constructions. If you can get balance via other means, you don't need the screen.   Balancing the loop reduces noise due to common mode issues. This isn't different from using a balun between a coaxial cable and a symmetrical dipole.
>>
>> Your option three may behave competently different, as the coaxial cable, power supply cable, switch mode power supply, etc may contribute to reception of signal and noise due to common mode to differential mode conversion.
>>
>> From my experience (reception) with electrically small well-balanced indoor loops and indoor dipoles, I found some advantage of the loop over the electric dipole at low frequencies (say below 3 MHz). I contribute this mainly because of the nulling capability. Whether is applies to your location depends on the field distribution of the noise at your location.
>>
>> At higher frequencies there is difference in S/N ratio, but not in favor of one antenna. Sharp nulling wasn't possible. So to know what option is best for you, you need to try it. Maybe install both options and select the antenna that gives best results as this will depend on frequency and the angle of arrival of the radiation you want to receive.
>>
>> Other thing that may really help is to find your local source(s) of noise, use lots of ferrites and try to find a sweet spot for best S/N ratio.

Hello Gary,

You are right, it is what I am saying.

There is no analogy between the shielding function of the braid in a coaxial transmission line and the shield in your loop.

For the "shielded" loop, the received voltage is across the gap in the shield. The shield is the actual single turn loop. The inner conductor is just there to transport the received signal to the opposite side of the gap where you can go down (with coaxial cable) to your receiver, maintaining balance.

Theoretically a coaxial transmission line system is completely closed.
Water from the outside can't reach the inner conductor, source or
load. When cutting a gap in the screen, the coaxial transmission line
system will leak.

Shielded loop with more turns
If you run more turns within the shield of the loop, you pass the gap
many times. When you pass it 3 times, you will get three times the
voltage, hence the impedance and loop inductance increase.

It is not true. Only in the cases of corona buildup, etc, on the elements would that be the case.
If you hear less noise with the loop, vs the dipole, it's due to the change in pattern. Not due to any qualities of the loop itself.
Noise is RF the same as any other signal, and follows all the same rules. It's no different than an actual signal.
If what you/they say is true, and the loop received less noise, it would also receive less "desired" signals. Or in other words, everything would be down vs the dipole.
The most likely explanation is the change in pattern less favored the direction the noise is coming from. Either that, or the noise is local to your shack, and for some reason the loop's feed line is better decoupled than the one feeding the dipole.
If I had to bet, I'd say it's the change in pattern.
There are no magical anti noise properties with loops.

True, but I mentioned that first thing..
"
Only in the cases of corona buildup, etc, on the
elements would that be the case. "

The "etc" including what you are referring to.. I was
just too lazy to include that in the list. :/

But say here in Houston, with the high humidity, we rarely
ever see the type static you had in AZ.
You can also see that in some snow storms from what I hear.

But I mainly want to vote against the idea that a loop, with
no static problems, has the ability to receive less noise as
far as radiated RF from other sources.
It's one of those myths "as far as I'm concerned" that needs
to be put out of it's misery.
For instance, some will claim a small shielded loop that is
indoors, will receive less noise than an equal size unshielded
loop in the same location. Have never seen that to be the
case here, when comparing them. In fact, both the loops I kept
for permanent use were regular old unshielded diamond loops.
The biggest being the PVC frame loop that is 44 inches per side
as I recall.. I have another one that is a circular loop about
16 inches dia. The large one is 7 turns. The small one I think 12
or so.
I tried using shielded loops, but the performance was the
same. I also tried using shielded loops as the coupling loop
inside the larger unshielded loop. Worked fine, but no better
than an unshielded coupling loop with no balance problems.
I kept the shielded coupling loop for the small loop, but
used plain wire on the large one. It was easier to thread
through the spreaders, and also lighter.

I understand that my experience contravenes your theories about how antennas should work.

I had several local hams suggest that I use a loop after I kept complaining about noise. I finally put it up. It is more difficult to erect than a simple dipole. It is at the same height as was my dipole 35 feet.

The receiver noise level dropped dramatically. I was so glad I went to the trouble to do it. I finally took down my dipole after switching back and forth for a year just to be sure the dipole was not better in some circumstance.

The other effect was an immediate increase in the signal received by my friends who live within about 200 miles. We operate at 3913. I could not figure this out until I consulted a pdf file about antennas. The 75 meter loop has a 9 dbi gain at the optimum height of 25 feet. Mine is a bit high but still gets some gain. All my friends reported on this increase in my output signal. This information can be found at http://www.hamuniverse.com/n4jaantennabook.html

This configuration is basically a NVIS antenna. It works so much better than did my dipole. It gets pretty good dx on 40 and 20. I use an Imax 2000 for 15 and 10.

So, I and my friends know that this antenna works better than a dipole by actually using it for several years. One of the hams in our group has been using a loop hung from 2 200 foot towers in a vertical position. He has done extensive experimentation over the last 45 years.

And yes, a 75 meter loop at 35 feet above ground has a different pattern than a dipole. I don't care why it works better at all. I and others just know that it works better and with less noise than a dipole.

And no, a loop antenna is not magic. It is different than a dipole. Different types of antennas behave differently. The worst antenna I hear on the air comes from people using G5RVs. Their signal is just totally lame when they use the recommended 80 foot dipole on 75 meters. If they would just extend that same antenna to 120 feet they would do so much better.

Sorry my loop works so well.

Michael

Here is quote from N4JA's informative antenna book.

.....XIV. ONE-WAVELENGTH SINGLE LOOP ANTENNAS

1. The Horizontally Oriented Loop

To calculate the length in feet of any one-wavelength loop, divide 1005 by the frequency in MHz. Horizontally oriented one-wavelength loop antennas have become very popular on 160, 80, and 40 meters and it is one type of NVIS antenna. (NVIS stands for "near vertical incidence skywave" because of its high angle radiation pattern.) It is claimed by its users that the loop antenna is quieter than other antennas. This is because it doesnt pick up the noise from power lines, thunderstorms, etc., coming in at low angles. These antennas radiate on their fundamental frequencies with a broad pattern straight up to put a strong signal for nearby contacts. Recently published articles on this type of antenna have called them "cloud warmers." There are other types of antennas called NVIS antennas other than loops. They are dipoles at low heights or dipoles with parasitic reflectors placed under them to cause the signal to radiate mostly straight up. The NVIS antennas have an advantage in working nearby stations because you dont get the static noise and interference from far distances. They are definitely not DX antennas. An article on NVIS antennas appears in the December 2005 QST......

I guess my hunch on the difference being pattern related
panned out.. :)
I've used horizontal loops on the low bands. But I came to the
conclusion they were generally not worth the extra trouble, vs
a dipole. I could barely see any difference here from the usual
dipoles I ran. And if the signal is stronger at one angle or direction,
vs another antenna, it's weaker in another. So it's all a compromise.

On the low bands, I came to the conclusion my favorite antenna for
mostly NVIS and medium path work was the turnstile.
Which are crossed dipoles. You can feed them in or out of phase
for either dipole patterns, or with them 90 degrees out of phase,
for a fairly round omnidirectional pattern.
I like to do well to the close in stations, but also the ones
farther off too.. So even if I used a loop, I would generally
try to get it as high as possible.
Which I also do using dipoles, or turnstiles.

Wim,

Thanks very much for your lucid explanation of how shielded loops function. I've been using one with a receiver I made to monitor VLF signals. It works quite well and I had thought it was because of all the local noise I was avoiding. But then I stumbled across VK1OD's article...

Best regards,
Gary Richardson, AA7VM

PS
Thanks also to all the other respondents. This has been a very interesting thread.

A loop is a loop is a loop, meaning that one side conductor goes
upwards while the other side goes downwards in contrast to a
linear wire antenna or a dipole which is extending in one direction
only. The up-and down (left and right) parts of the wire cancel out
each other at least partially when collecting energy from an electric
field, while the energy uptake from a magnetic field is proportional
to the loop area.
This electric noise cancellation is not perfect, due to unsymmetries
in the field, therefore it pays to shield the loop wires and decrease
the electric influences further.

I hope my explanation is simple enough.

w.

Feynman has been called the "Great Explainer".[22] He gained a reputation for taking great care when giving explanations to his students and for making it a moral duty to make the topic accessible. His guiding principle was that if a topic could not be explained in a freshman lecture, it was not yet fully understood. Feynman gained great pleasure[23] from coming up with such a "freshman-level" explanation". The below is the example:

>"So now, I present to you the three basic actions, from which all the
>phenomena of light and electrons arise:

>-Action #1: A photon goes from place to place.
>-Action #2: An electron goes from place to place.
>-Action #3: An electron emits or absorbs a photon."

>When Feynman says "light", he is including RF. Photons travel at the speed
>of light in the medium which is impossible for electrons which possess rest
>mass. There are no electrons in a pure vacuum, yet light and radio waves
>pass through it at the speed of light with no problem.

Feynman was a teacher. The scientists were the opposite opinion:

"
In 1900, Max Planck was working on black-body radiation and suggested that the energy in electromagnetic waves could only be released in "packets" of energy. In his 1901 article [4] in Annalen der Physik he called these packets "energy elements". The word quanta (singular quantum) was used even before 1900 to mean particles or amounts of different quantities, including electricity. Later, in 1905 Albert Einstein went further by suggesting that electromagnetic waves could only exist in these discrete wave-packets.[5] He called such a wave-packet the light quantum (German: das Lichtquant). The name photon derives from the Greek word for light, ??? (transliterated ph�s), and was coined[Note 1] in 1926 by the physical chemist Gilbert Lewis, who published a speculative theory in which photons were "uncreatable and indestructible".[6] Although Lewis' theory was never accepted as it was contradicted by many experiments, his new name, photon, was adopted immediately by most physicists. Isaac Asimov credits Arthur Compton with defining quanta of energy as photons in 1923."[7][8]

For scientists the photon is like the tone in sound.

In the pure vacuum are electrons. Do not you know about the Dirac electron sea?

S*

Following your "logic", why go back to 1869? Why not question the periodic table of elements because a few millennia ago, men of science asserted that there are four elements: earth, air, fire, and water. So why not adopt the four element argument as well?

Hello Szczepan.
Can you explain the Dirac electron sea in simple terms, please?

Regards, Ian.

For Faraday, Lorenz and Tesla the light and radio waves are exactly like the sound.
So we must distinguish the speed of the light and the speed of the particles of the medium.
For Faraday, Lorenz and Tesla the medium is the plasma (ions + electrons).

So the key issue is if "In the pure vacuum are electrons". Are they?

?The thing that travels at the speed of light has been proven to be quantized, i.e. to consist of discrete packets or particles. It has been 84 years since Dirac came up with his theory. It is now generally accepted that Dirac's "sea of electrons" is made up of something other than electrons, i.e. dark matter/energy, in a quantum structure which results in the Casimir effect.

Here's the problem with a "sea of electrons" or virtual particles to explain the quantum structure:

http://science.nasa.gov/astrophysics/focus-areas/what-is-dark-energy/

"But when physicists tried to calculate how much energy this would give empty space, the answer came out wrong - wrong by a lot. The number came out 10120 times too big. That's a 1 with 120 zeros after it. It's hard to get an answer that bad. So the mystery continues."

The "electron waves" or oscillatory flow of electrons is simply seen in the crystal radio and rectennas.
But everybody prefer "So the mystery continues."

Everyone's attempts to reason with Snicklefritz Dingle (sz.bialek@wp.pl) will come to naught. It reminds me of a joke:

A farmer was having a hard time with his new mule. The stubborn mule wouldn't take the harness. Reluctantly, he hired a mule-trainer, who arrived promptly the next morning.

The mule-trainer picked up a sledgehammer and slammed the mule between the eyes. The mule staggered backwards from the blow.

"Hey," screamed the farmer, "I don't want you to kill my mule!"

"Relax, pal." replied the mule-trainer. "Before you can train 'em, you have to get their attention."

In my considered opinion, nobody really has Snicklefritz's attention.

"Sal"

>

The full-size G5RV is 102' (not 80'), and works pretty well as a shortish halfwave on 80m. The half-size is 51', and is intended for 40m and above. However, although maybe not the antenna of choice, with a tuner and 450 or 600 ohm twin feeder it should be possible to make even an 80' dipole work fairly effectively on 80m.

One amateur (local to me), who I believe has limited space, reckons that
a straight, short dipole works better than a squeezed-in, dog-legged
full-size dipole. I think his is 85', and it certainly works well on
80m.

On 160m, I had better luck using a full size "Z" dipole than
I did shorter dipoles that were loaded with high Q coils.

I sort of agree with him about the G5RV, but it's the feed that
is the problem, not the length of the radiator. Generally too much
feedline loss with the way most people run them. Same problem with
many of the various commercial Windoms that they sell.

I prefer the full length dipoles because it's easy to feed them in
a low loss manner. On the low bands, it's very hard to beat a dipole
fed with coax for overall system efficiency. Maybe nearly impossible,
being as I've never found anything more efficient so far.
I suppose a tuned feeder of ladder line would be as good, "IE: the Cecil
method" but not nearly as convenient.
I never could match coax performance using ladder line and a tuner.
Close, but not quite.. No matter how careful setting the tuner using
the very minimum of inductance.

I guess that's why I'm such a coax fan... May not be good for multi-
band use with a single dipole, but for single or limited band use, very
hard to beat.

I remember one year I got stuck using some kind of Windom for 80 and 40
at field day.
It was terrible... I swore never, ever again..

But sure nuff.. The next year they tried to stick me on a windom again.
But I was ready.. :) I brought everything I needed to make a dipole
on site. Which I did. I then whipped out a coax switch so I could
A/B the two antennas, just to prove I wasn't barking at the moon.
When you switched to the coax fed dipole, *everything* jumped up
at least full 2 S units on his rig. His eyes got big as saucers.
He never really suspected he was losing that much.
Needless to say, I stayed on the coax fed dipole.
The RF mayhem of field day is no time to be using lossy compromise
antennas.. I never could see that, when you have enough room to
use just about anything.

Here's one that will beat most RG-8x fed dipoles.

I use 213 though... :) Your method is about the only other one
I can think of that should be as good. On paper, slightly less
loss than the coax, but being I've never compared them side by
side, I couldn't say if your method is actually superior enough
to see a difference on a meter.. I've never tried your method of
feeding. The physical aspects are not too convenient for me most
of the time.
In the case of the ladder line/tuner vs coax, the difference was
small, but enough to notice a bit of difference on an S meter.
Of course, I'm using received signals to judge. Things should be
reciprocal, so I usually don't bother trying to do transmit tests
as I consider it less reliable than quick A/B comparisons and my
eyes on a meter.
Good ladder line is generally less loss than good coax, but on the
low bands, the loss per foot of good coax is pretty low.
I would think the advantage to your system would increase as you
rise in frequency. IE: at 50 Mhz, might be quite worthwhile.. Or if
long runs are involved. When I ran ATV on 70 cm, I preferred TV twin
lead over coax for the UHF TV antenna I used for receive.
It had less loss than coax to a 4:1 TV balun. As long as it was dry..
Wet? Nearly useless... :(
